

## DECLASSIFIED

FM 101-10

## STAFF OFFICERS' <br> FIELD MANUAL

# ORGANIZATION, TECHNICAL, AND LOGISTICAL DATA 

Prepared under Direction of the
Chief of Staff

## WAR DEPAFTMENT,

 Washington, (June 15, 1941).FM 101-10, Staff Officers' Field Manual, Organization, Technical, and Logistical Data, is published for the information and guidance of all concerned.

This manual and FM 101-5, Staff Officers' Field Manual-The Staff and Combat Orders, are compilations of information and data to be used as a guide for the operations in the field of the general staff or a similar staff group of all units in peace and war.

Much of the data herein are not exact values as they represent the average of widely varying conditions of field service and troop training. A constant fluctuation in the value of approximated data should be expected to conform to the changes which develop in field conditions. In cases where experience has not indicated the limits of variation to be expected, a reasonable factor of safety should be allowed.
(A.G. 062.11 (6-15-41).)

By order of the Secretary of War:

> G. C. MARSHALL, Chief of Staff.

Official:
E.S. ADAMS,

Major General, The Adjutant General.

IV. GHQ Reserve and Air Corps units. .25-28
V. Data pertaining to supply and evacuation units...................................29-34

## SECTION I

ORGANIZATION OF FIELD FORCES

- 1. Organization of Field Forces:

- 2. Training.and Supply Channels:

- 3. Corps Area Boundaries and Nattonal Guard Division Areas:

- 4. Army, Corps, Division, and Coast Artillery District Assignments:

- 41/2. Defense Command Areas-Continental United States.

## SECTION II

## DIVISION ORGANIZATIONS

5. Infantry Division (Square)(1)(5)-Diagram:

Infantry Division (Square) (Continued) :

NOTES
(1) Strength shown includes attached medical personnel and chaplains.
(2) Car Company, Quartermaster Regiment furnishes transportation for Division Headquarters.
(3) In tactical situations, each Infantry Battalion has attached to it:

Bn. Sec., Com Plat, Regt. Hq. Co. O-1 EM-17
Bn. Sec., Trans. Plat, Serv. Co. O-1 EM-17
In the diagram, the above are included in the strength shown for the Headquarters Company \& Service Company, and not in those for the Battalion.
(4) Includes Division Surgeon's Office.
(3) Based on War Department tables dated November 1, 1940 (Field Artillery, Infantry Regiment and Quartermaster Truck Company, tables dated October 1, 1940.)
(6) Moves by organic transport.

Corps Troops, Type Corps-Consolidated Table (Continued)

- 22. Armored Corps.-Diagram:

Additional Units from GHQ as situation demands
(1) Includes attached medical.
23. Type Field Army.-A field army consists of an army headquarters, two or more army corps (normally 3) temporarily assigned, and certain organic army troops.

Other troops temporarily attached to an army may be retained as army troops, or be reallotted to its corps in accordance with their needs.

The Army Headquarters includes Headquarters of army Artillery, Antiaircraft Artillery, Aviation, Chemical Warfare Troops, Engineers, Medical Service, Ordnance, and Quartermaster Service.

One or more cavalry or armored divisions may be allotted to each army from GHQ reserve.

- 24. Army Troops, Type Field Army:

## Section IV

## GHQ RESERVE AND ARMY AIR FORCE UNITS

- 25. GHQ Reserve.-The GHQ Reserve comprises a pool of combat and service units held available by GHQ for temporary assignment to armies, groups of armies, or the communications zone, according to their needs. It may include units of the types organically assigned to field armies, army corps, and divisions, and also may include units of the following types:

Infantry:
Units trained for special purposes, such as mountain and arctic warfare, and parachute troops.
Tank battalions and groups.
Field Artillery:
Pack artillery regiments (75-mm How).
Horse-drawn artillery regiments ( $75-\mathrm{mm}$ Gun).
8 -inch, $155-\mathrm{mm}$, and $240-\mathrm{mm}$ howitzer regiments.
$155-\mathrm{mm}$ gun regiments.
Antitank Battalions.
Coast Artillery :
Railway artillery units.
AA Regiments, semi-mobile.
Mobile AA gun battalions, separate.
Army Air Force units.
Armored corps and divisions.
Motorized divisions.
Cavalry divisions.
Medical Department units.
Engineer units.
Ordnance units.
Quartermaster units.
Signal Corps units.
Chemical Regiments.

|  |  |  |  | ection 1, AR 615-26. A number above |
| 12 | A Parachute $\boldsymbol{c}$. |  | 17 | 500 refers to a military occupational specialist listed in section II, AR 615-26. |

(A. G. 320.2 (3-22-41.)

- 27. Parachute Battalions.-Diagram (Tentative organization):

28. Organization of Air Corps Units.-The Air Force Combat Command contains four air forces, organized geographically. All air force units above squadron are highly flexible, and may be modified at any time, both as to number and type of lower units contained. The organizations indicated for air force, command, wing and group, therefore, are type organizations only, and are included to indicate general relationships, and not fixed composition. (1)(2)(3)

| Unit | T/O | 0 | EM | AP(1)(6) | Remarics |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Air Force |  |  |  |  | A type air force consists of a mobile echelon and a fixed echelon. The fixed echelon includes air bases and an air warning service. The mobile echelon contains a $\mathbf{H q}$ and Hq Sqdn and one or more Bomber Commands and one or more Interceptor Commands. |
| $\underset{\text { Force }}{\text { Hq }} \underset{\text { Hq }}{\text { Sqdn }}$ Air | 1-800-1 | 78 | 605 | $\begin{aligned} & 6 \mathrm{SE} \\ & 7 \mathrm{TE} \end{aligned}$ | Contains a Gen. Staff, Sp. Staff, Hq Sqdn. Has attached a Signal Co., Aviation. |
| Bomber Command |  |  |  |  | Contains a $\mathrm{Hq} \& \mathrm{Hq}_{\mathrm{Sq}} \mathrm{Sq}$ and one or more Bombardment Wings, Heavy, Medium or Light, or any combination of these. |
| Hq \& Hq Sqdn, Bomber Command | 1-100-1 | 28 | 154 | $\begin{aligned} & 1 \mathrm{SE} \\ & 2 \mathrm{TE} \end{aligned}$ | (6) |
| Wing |  |  |  |  | Contains a $\mathrm{Hq} \& \mathrm{Hq} \mathrm{Sqdn}$ and one or more Groups, Bombardment, ( $\mathbf{H v}, \mathbf{M}$, or L) (Pursuit Fighter or Interceptor Fighter). |
| Hq \& Hq Sqdn, Wing (Bombardment) (Interceptor) (Fighter) | 1-10-1 | 14 | 130 | $\begin{aligned} & 1 \mathrm{SE} \\ & 2 \mathrm{TE} \end{aligned}$ | (6) |
| Bombardment Group Heavy (Medium) (Light) |  |  | * |  | Contains a Hq \& Hq Sqdn and three bornbardment sqdns and, as needed, one reconnaissance sqdn, (heavy, medium or light). |
| Hq* Hq Sqdn, Group Bombardment, Heavy | 1-112 | 24 | 267 | 3 FE | (6) ${ }^{\text {( }}$ |
| Bombardment Sqdn, Heavy | 1-117 | 38 | 237 | 8 FE | (8) Operates in 2 flights-A \& B. Carries up to 4,800 lbs. of bombs (largest bomb 2,000 lbs.) and has range of operation up to 3,400 miles. |
| Hq \& Hq Sqdn, Group Bombardment, Medium | 1-122 | 26 | 273 | 5 TE | (8)(7) |

Organization of Air Corps Units (Continued) :

| Unit | T/O | 0 | EM | $A P(4)$ | Remarks |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Bombardment Squadron, Medium | 1-127 | 52 | 254 | 13 TE | Operates in 3 fights- <br> Flight A-5 airplanes; Flights B and C4 airplanes each. <br> Combat crew of each airplane is: 1 officer, pilot <br> 1 enlisted man, bombardiergunner <br> 1 enlisted man, armorer-gunner. <br> Carries bomb load up to $4,500 \mathrm{lbs}$, and has range of up to 3,000 miles. |

| Bombardment Sqdn, Light | 1-137 | 20 | 219 | 13 TE | Operates in 3 Flights-A, B \& C <br> Flight A-5 airplanes <br> Flight B - 4 airplanes <br> Flight C-4 airplanes <br> Combat crew each airplane <br> 1 officer-pilot <br> 1 officer-bombardier-gunner (a) <br> 1 enlisted man-armorer-gunner. <br> (a) Officer replaced by enlisted man in all except Squadron and Flight commander's planes. <br> Carries bombs up to 2,400 lbs, and has range of operation up to 1,000 miles. |
| Reconnaissance Sqdn, Heavy | 1-217 | 44 | 271 | 8 FE | ```Operates in 2 flights-A and B; 4 airplanes each. Combat crew for each airplane: 1 officer-pilot 1 officer-co-pilot-observer 1 officer-navigator-observer 1 officer-observer-bombardier- gunner 2 enlisted men-aerial engineer- gunner 2 enlisted men-radio operator- gunner 1 enlisted man-photographer- gunner Suitable for reconnaissance up to 3,400 miles``` |
| Reconnaissance Squadron, Medium | 1-227 | 61 | 276 | 13 TE | Operates in 3 Flights-A, B and C Flight A-5 airplanes Flight B-4 airplanes Flight C-4 airplanes Combat crew for each airplane 1 officer, pilot 1 officer, co-pilot-observer 1 officer, navigator-observer 1 officer, observer-bombardier- gunner 1 enlisted man, radio operator- gunner 1 nelisted man, photographer- gunner 1 enlisted man, aerial engineer- gunner Suitable for reconnaissance up to 3,000 miles. |

Organization of Air Corps Units (Continued) :

| Unit | T/O | 0 | EM | $A P(4)$ | Remarks |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Reconnaissance Squad ron, Light | 1-237 | 33 | 241 | 13 TE | Operates in 3 Flights, A, B \& C Flight A-5 airplanes Flight B-4 airplanes Flight C-4 airplanes Combat crew for each airplane 1 officer, pilot 1 officer, observer:--bombardier- gunner 1 enlisted man, gunner Suitable for reconnaissance up to 1,000 miles. |
| Isterceptor Command |  |  |  |  | Contains a $\mathrm{Hq} \& \mathrm{Hq} \mathrm{Sqdn}$ and one or more Interceptor Wings. |
| Hq \& Hq Sqdn, Interceptor Command | 1-200-1 | 32 | 169 | $\begin{aligned} & 1 \mathrm{SE} \\ & 2 \mathrm{TE} \end{aligned}$ | (6) |
| Pursuit Group |  |  |  |  | Contains a $\mathrm{Hq} \& \mathrm{Hq}$ Sqdrı and 3 Pursuit, Fighter (Interceptor) Squadrons. |
|  | 1-12 | 47 | 259 | 5 SE | © |
| Fighter Pursuit Squadron | 1-37 | 34 | 287 | 25 TE | Operates in 3 Flights, A, B and C <br> Flight A-9 airplanes <br> Flight B-8 airplanes <br> Flight C-8 airplanes <br> Combat crew for each airplane <br> 1 officer, pilot <br> 1 enlisted man, guniner <br> Long range airplanes, suitable for protecting bombardment or reconnaissance planes on relatively distant missions. |
| Interceptor Pursuit Squadror | 1-27 | 42 | 218 | 25 SE | Operates in 3 Flights, A, B \& C <br> Flight A-9 airplanes <br> Flight B-8 airplanes <br> Flight C-8 airplanes <br> Combat Crew <br> 1 officer, pilot <br> Short range airplanes, with high rate of climb. <br> Suitable for protection of local areas or installation against hostile aircraft. |
| Observation Squadron | 1-255 | 38 | 159 | 13 SE | 3 per type Army Corps. <br> Operates in 3 Flights, A, B \& C <br> Flight A-5 airplanes <br> Flight B-4 airplanes <br> Flight C-4 airplanes <br> Suitable for observation missions of 2 hours, and to operate up to 500 miles. |

Type airplanes are designated by a letter. The number following the letter is the model of that typeExample:

B-23 $=$ Bomber-twenty third model
$\mathbf{P}-40=$ Pursuit-fortieth model
C- $50=$ Cargo-fiftieth model
O- $-52=$ Observation, etc.

## Organization of Air Corps Units (Continued) :

(2)
Wings or Groups usually contain one type of aircraft. If necessary composite Wings or Groups may contain more than one type of aircraft.
(3)Ranges and bomb loads are approximate-they vary with each type of aircraft. Where maximum ranges are desired, the minimum bomb load is carried and engines are operated at economical speeds.
(4) $\mathrm{SE}=$ Single Engine

TE=Two Engine
FE=Four Engine
(5)All combat units normally operate at approximately $75 \%$ airplane strength, i. e.

Pursuit Squadron operates 18 out of 25
Observation Squadron operates 9 out of 13
Bomb (Heavy) Squadron operates 6 out of 8
Bomb (Med) Squadron operates 9 out of 13
Bomb (Light) Squadron operates 9 out of 13
Reconnaissance ( Hv ) Squadron operates 6 out of 8
Reconnaissance (Med) Squadron operates 9 out of 13
Reconnaissance (L) Squadron operates 9 out of 13
${ }^{\circ} \mathrm{OHq}$ and Hdqrs Squadrons of Commands, Wings or Groups contain command, communications, minimum administrative and transportation elements. Liaison Officers might be drawn from these units.
(3)Transportation, except ambulances, and all chauffeurs and other transportation personnel for the entire Group are included in the Hq and Hqs Squadron of the group.
Independent Squadrons have own transportation.
(8) Combat crew for Sq Commander and Flight Commanders consist of:

1 officer, pilot
1 officer, co-pilot
1 officer, navigator
1 officer, bombardier
1 enlisted man, aerial engineer-gunner
1 enlisted man, asst aerial engineer-gunner
2 enlisted men, radio operators-gunner
For all other airplanes:
1 officer, pilot
1 officer, co-pilot
1 officer, navigator
1 enlisted man, bombardier-gunner
1 enlisted man, asst aerial engineer-gunner
2 enlisted men, radio operator-gunner
1 enlisted man, aerial engineer-gunner

Transportation sufficient for organic personnel and material. 3 sets intrenching tools for infantry. |
| Engr Bn (Armd) (2) | 5-215 | 28 | 729 | 1 per armored division. $\mathrm{Hq} \mathrm{Co}, 3$ Engr Cos of 2 Plats ea, 1 Bridge Co. Transportation sufficient for organic personnel and equipment. |
| Engr Sq | 5-115 | 16 | 451 | 1 per cavalry division. $\mathrm{Hq} \& \mathrm{Hq} \&$ Serv $\mathrm{Tr}, 2$ Engr Trs of 3 Plats ea. Engr service for cavalry division: 4 sets of intrenching equipment, cavalry. Transportation sufficient for organic personnel and equipment. |
| Engr Regt (Gen Serv) | 5-21 | 46 | 1,259 | 3 per type army. Hq \& Hq \& Serv Co, 2 Bns with 3 Engr Cos (Gen Serv) each; 18 operating units. General engineer service and construction of all classes. |
| $\underset{\text { (Sep) }}{\text { Engr Bn }}$ | 5-35 | 26 | 1,218 | 6 per type army. Hq \& Hq \& Serv Co, 4 Engr Cos (Sep) (ea of 2 Plats of 9 squads). Essentially a labor unit. Not trained for general construction work. |
| $\underset{\text { (Dep) }}{\text { Engr Co }}$ | 5-47 | 4 | 174 | 1 per type army. 1 per type Air Force. Hq Plat, 3 Dep Plats. Operates engineer depot for general supplies. Depot stockages vary greatly. Maintenance requirements per type army per day: one depot co can furnish personnel to handle a depot of about $300,000 \mathrm{sq} \mathrm{ft}$ of storage area. |
| $\begin{gathered} \text { Engr Co } \\ \text { (Dp Trk) } \end{gathered}$ | 5-88 | 4 | 121 | 2 per type army. Hq Plat, 2 Transp Plats. Furnishes 45 $11 / 2$-ton dump trucks for engineer hauling. |
| $\begin{gathered} \text { Engr Co } \\ \text { (mobile } \\ \text { shop) } \end{gathered}$ | 5-157 | 5 | 170 | 1 per type army. Hq Plat, 3 mobile shop Plat. Executes 3d echelon maintenance for all equipment for which engineers have maintenance responsibility. |

## NOTES

(1) Includes attached medical and chaplains.
(2) For bridge and ferrying equipment, see Chapter 7, this manual.

Engineer Units (Continued):

| 1 | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: |
| Unit | $\begin{aligned} & T / O \\ & \text { No. } \end{aligned}$ | 0 | EM | Remarks |
| $\underset{\text { (W Sup) }}{\text { Engr }}$ | 5-65 | 22 | 418 | 1 per type army. Hq \& Hq \& Serv Co, 3 Engr Cos (W Sup). Receives, purifies and transports water. Transport capacity: 67,500 gallons per trip. Purification capacity: 37,800 gallons per hour. Under normal conditions the battalion can supply 1 type army, but in highly congested areas or where but little water is available locally, only 1 corps can be served adequately. Equipped with storage facilities. Not equipped for well drilling or construction of reservoirs. 90 trks, $21 / 2$-ton, tank, 750 gal , for water; 9 trks, water purification. |
| Engr Bn (Cam, Army) | 5-95 | 30 | 413 | 1 per type army. Hq \& Hq \& Serv Co, 4 Engr Cos (Cam, army). Primary mission is camouflage inspection, discipline and training. Supplies camouflage materials. Prepares plans for general or special camouflage installations. |
| Engr Bn (Cam, GHQ) | 5-135 | 24 | 414 | 1 per GHQ. Primarily a manufacturing unit. It also has same functions as the army battalion. |
| Engr Hq(Ry) | 5-302 | 24 | 216 | The manager MRS and 4 staff departments supervise the operation and maintenance of all military railways in the Theatre of Operations. |
| $\underset{\text { (Ry, Div) }}{\text { Engr Hq }}$ | 5-602 | 24 | 74 | The general superintendent and 6 staff sections supervise and coordinate the operations of several railway divisions with attached shop and other troops to form a grand division. |
| Engr Bn (Ry, Operating) | 5-125 | 21 | 820 | Com Z and GHQ units. Hq \& Hq \& Serv Co, 1 Engr Co (Maint of Equip), 1 Engr Co (Maint of Way); 1 Engr Co (Transportation). Operates and maintains a railway division up to 120 miles in length, without increase of personnel. The battalion can furnish crews for 20 to 24 trains each way per day, or a total of 40 trains per day. |
| $\underset{(\mathrm{Ry}, \text { Shop) }}{\mathrm{Engr} \mathrm{Bn}}$ | 5-145 | 23 | 658 | Com $Z$ and GHQ units. Hq \& Hq \& Serv Co, 1 Engr Co (Erecting \& Machine Shop), 1 Eng Co (Boiler \& Smith Shop), 1 Engr Co (Car:Repair). Operates heavy shops and executes assembly and major repairs of railway equipment. The bn can serve 2 or more engr ry operating bas. |
| Engr Bn (Top, Army) | 5-55 | 40 | 1,005 | 1 per type army. Hq \& Hq \& Seriv Co, $1^{\prime}$ Engr Co (Reproduction), 1 Engr Co (Photomapping), 2 Eingr Cos (Surv). Map making, reproduction, and proéurement. |
| Engr Bn (Top, GHQ) | 5-185 | 32 | 778 | Hq \& Hq \& Serv Co, 1 Engr Co (Reproduction), 1 Engr (Photomapping), 1 Engr Co (Surv). Map making and reproductions. |
| $\begin{gathered} \text { Engr Co } \\ \text { (Top, } \\ \text { Corps) } \end{gathered}$ | 5-167 | 5 | 115 | 1 per type corps. Co Hq and 3 Plats (survery, photomapping and reproduction). Map making and reproduction. |
| $\begin{aligned} & \text { Engr Bn } \\ & \quad \begin{array}{l} \text { (i) Pon) } \\ \text { (1) } \end{array} \end{aligned}$ | 5-275 | 14 | 468 | 2 per type army. Hq \& Hq \& Serv Co, 2 Engr Cos (Hv Pon), with 2 Plats each. A ponton bridge transport and maintenance unit. Four $250-\mathrm{ft}$ bridges of 25 -tons capacity, combined length up to $1,000 \mathrm{ft}$. Bridges will carry all loads of the field army. Construction is done by the battalion reinforced by general engineer units. |

Engineer Units (Continued) :

| 1 | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: |
| Unit | $\begin{aligned} & T / O \\ & \text { No. } \end{aligned}$ | 0 | EM | Remarks |
| $\begin{aligned} & \text { Engr Co } \\ & \text { (L. Pon) } \\ & \text { (1) } \end{aligned}$ | 5-87 | 6 | 215 | 4 per type army. 1 Hq Plat, 3 Bdg Plats. Equipment for 3 bridges with combined length of up to 750 feet. Construction is done by general engineer units. |
| $\begin{gathered} \text { Engr Regt } \\ \text { (Avn) } \end{gathered}$ | 5-411 | 70 | 1,777 | 2 per type Air Force. Hq \& Hq \& Serv Co, 3 Bns with 3 Engr Cos (Avn) each. Provides for maintenance and construction of airdromes and routes thereto; assists in defense. |
| $\begin{aligned} & \text { Engr Co, Avn } \\ & \text { (Sep) } \end{aligned}$ | 5-427 | 5 | 176 | Co Hq, Serv Plat and 2 Operating Plats. Organized for independent operations at a distance from other units. Additional hand labor attached when needed. |

(1)

For bridge and ferrying equipment, see Chapter 7, this manual.

- 30. Medical Units:

| 1 | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: |
| Unit | $\begin{aligned} & \text { T/O } \\ & \text { No. } \end{aligned}$ | 0 | EM | Remarks |
| Med Regt | 8-21 | 66 | 980 | 3 per type army. 1 per infantry division (square). $\mathrm{Hq} \& \mathrm{Hq}$ \& Serv Co, 1 Coll Bn, 1 Amb Bn, 1 Clr Bn. Division: collection, evacuation, temporary care, sanitation, and medical supply in division area. Army: same service for army troops. In addition the regiments perform all evacuation from division, corps, and army clearing stations to evacuation hospitals and reinforce divisions and evacuation hospitals. Temporary care for 750 patients, normally, 1,200 for not to exceed 24 hours. Equipment not suitable for definitive treatment hospitalization. One ambulance company can move 80 patients lying, or 200 patients sitting, per trip. <br>  Movement by rail requires 5 trains. Clearing station requires 1 hour to establish. Can be dismantled in 2 hours, but 1 to 3 additional hours are required to evacuate patients, if filled. The 60 motor ambulances available can move all if filled. personnel plus 100 patients. |
| Med Bn | 8-65 | 34 | 476 | 1 per infantry division (triangular or triangular, motorized.) 1 per type corps. Hq \& Hq Det, 3 Coll Cos, 1 Clr Co 36 Amb; 15 trks, $21 / 2$-ton; 21 trks, $11 / 2$-ton. Can move organic personnel. |

## NOTE

(2) The floor space requirements given refer to buildings constructed for hospital purposes. For converted buildings, such as hotels, the floor space requirements are approximately four times that required in buildings constructed for use as hospitals.

## Medical Units (Continued) :

| 1 | 2 | 9 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: |
| Unit | $\begin{aligned} & T / 0 \\ & N o . \end{aligned}$ | 0 | EM | Remarks |
| $\underset{\text { (Armd Div) }}{\text { Med Bn }}$ | 8-75 | 25 | 333 | 1 per armored division. $\mathrm{Hq} \& \mathrm{Hq}$ Det, 1 Coll $\mathrm{Co}, 1 \mathrm{Cl}$ Co. <br> $30 \mathrm{Amb} ; 27$ trks, $21 / 2$-ton. Can move organic personnel. |
| Med Sq | 8-85 | 28 | 336 | 1 per cavalry division. Hq \& Hq \& Serv Det, 1 Coll Tr; 1 Cl Tr, 1 Vet Tr. 24 ambs. Can move organic personnel. |
| Evac Hosp | 8-232 | $\begin{gathered} 47 \\ 52-\mathrm{N} \end{gathered}$ | 318 | 10 per type army. Receives all classes of cases and prepares them for further evacuation by rail. May be used for definitive hospitalization in an emergency. Capacity: 750 patients, normally; 1,200 for not to exceed 3 days. Set up 12 to 30 miles from the front, on a road from the front and on a railroad to the rear. Sewage facilities are desirable. Minimum space requirements: Under tents: $200 \times 200$ yds. <br> In buildings: $80,000 \mathrm{sq} \mathrm{ft}$. (2) <br> Requires 4 to 6 hours to establish and 8 to 10 hours to dismantle, when empty. Has a small number of organic motor vehicles. Usually moves by rail. Movement requires $2 / 3$ train, type A, or 184 truck tons for equipment only. |
| Surg Hosp | 8-231 | $\begin{gathered} 50 \\ 60-\mathrm{N} \end{gathered}$ | 275 | 4 per type army. 1 per army in GHQ Res. Operates surgical hospital in front line div areas, but remains under army or corps control. Cares for nontransportable casualties only. Capacity 400 patients. Organized into a mobile selfcontained surgical unit available for reinforcing any other medical unit within the army, and 2 hospitalization units (capacity 200 each), one or both of which or 1 hospitalization unit (less a ward section), can be established at one or more points as required. |
| Conv Hosp | 8-233 | 28 | 189 | 1 per type army. Receives convalescents from evacuation hospitals. Capacity: 3,000 patients, normally; 5,000 for not to exceed one week. Set up in rear of army area on roads and a railroad, preferably near the army replacement pool. Sewage facilities are desirable. Minimum space requirements: <br> Under tents: $540 \times 300$ yards. <br> In buildings: $120,000 \mathrm{sq} \mathrm{ft}$. (2) <br> Has small number of organic motor vehicles. Movement requires $1 / 2$-train, type A, or 232 truck tons additional for equipment only. |
| Med Lab (Army or Com Z) | 8-234 | 11 | 45 | 1 per type army. 1 per section of $\operatorname{Com} Z$. When the $\operatorname{Com} Z$ is not organized in sections, laboratories are located as required by the health situation. Conducts epidemiological investigations, surveys, and studies, with necessary laboratory work, including water analysis. Has small number of organic motor vehicles. Movement requires $1 / 6$ train, type A, or 5 truck tons additional for equipment only. |
| Med Sup Dep (Army or Com Z) | 8-235 | 15 | 198 | I per type army. 1 per medical supply depot in the Com Z. Operates medical supply depots of the army and the Com Z. T/O provides personnel for necessary labor. Stockage of army depot is usually limited to items and quantities essential to maintain combat efficiency for not to exceed 3 days. Space requirements: under tents, $40 \times 50$ yards. The army depot is mobile; the Com Z depot is immobile. Movement (supplies not included) requires $1 / 2$-train, type $A$, or 90 truck tons additional for equipment only. |

Medical Units (Continued) :

| 1 | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: |
| Unit | $\begin{aligned} & \text { T/O } \\ & \text { No. } \end{aligned}$ | 0 | EM | Remarks |
| Vet Evac Hosp | 8-236 | 6 | 83 | A GHQ unit. Capacity: 150 animals, normally; 300 in an emergency. Established within one days' march for animal casualites from division veterinary clearing or aid stations, preferably on or near a railroad to the rear. Minimum space requirements: under tents, $125 \times 100$ yards. Small number of organic motor vehicles. Usually moves by rail. Movement requires $1 / 4$-train, type A, or 9 truck tons for equipment only. |
| Vet Conv Hosp | 8-237 | 10 | 253 | A GHQ unit. Receives convalescents from veterinary evacuation hospitals. Capacity: 1,000 animals, normally; 2,000 in an emergency. Movement requires $1 / 2^{-t r a i n, ~ t y p e ~ A, ~ o r ~} 24$ truck tons additional for equipment only. |
| Hosp Tn | 8-506 | $\begin{gathered} 4 \\ 6-N \end{gathered}$ | 35 | Requirements based on length of haul and expected casualties. In general, 1 per division engaged will be required in the Theatre of Opns. Evacuates casualties irom evacuation to general hospitals, between general hospitals, from general hospitals to the Z of I, and within the Z of I. Within the Theatre of Opns, the Medical Dept is charged with care and treatment of patients transported and general administration. Movement into combat zone and out of it controlled by Regulating Officer. Classification - (1) type train; 22 cars, 20 -ton box type, superstructure altered to meet M D requirements, average capacity 300 patients; (2) Improvised: one hosp unit car, 1 baggage car and a variable number of pullman, tourist sleeper, or chair cars, depending on availability; average capacity 500 patients. |
| Gen Hosp | 8-507 | $\begin{aligned} & 73 \\ & 120-\mathrm{N} \end{aligned}$ | 500 | The number of general hospitals in the $\mathbf{C o m ~ Z}$ or the $\mathbf{Z}$ of $\mathbf{I}$ depends on the expected demand and the policy of evacuation from the Theatre of Opns to the Z of I. Receives patients from the combat zone or from other hospitals in the Com Z. Provides definitive hospitalization for all classes of cases. Capacity: 1,000 patients per general hospital. Always located on a railroad or water-way. In the Com $Z$ or the $Z$ of $I$, a number of general hospitals may be grouped to form a hospital center. The general hospital is not mobile. Minimum floor space requirements: 120,000 square feet. (2) Has a small number of motor vehicles, including ambulances, to supply itself and to move a few patients. Weight of equipment: 142 tons. Cubage: 15,936 cubic feet. |
| Sta Hosp ( $\operatorname{Com}$ Z) | 8-503 | $\begin{gathered} 20 \\ 30-\mathrm{N} \end{gathered}$ | 150 | Operates station hospital in the Com Z whenever the number of troops in the area justifies its establishments. Does not receive patients from combat zone. Capacity: 250 patients each. Can be doubled or tripled in streagth and capacity. Minimum floor space requirements: 32,000 square feet. (2) Not mobile. Has a small number of motor vehicles, including ambulances, to supply itself and move a few patients. Weight of equipment: 57 tons. Cubage: 7,051 cubic feet. |
| $\overline{\text { Vet Gen Hosp }}$ | 8-509 | 11 | 269 | Receives patients from the combat zone or from other veterinary hospitals. Capacity: 500 animals, normally; 1,000 in an emergency. Located in the Com Z or the Z of I only. Not mobile. Has a small number of motor vehicles for its own supply service. Weight of equipment: 8 -tons. Cubage: 895 cubic feet. |

## Medical Units (Continued) :

| 1 | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: |
| Crit | $\begin{aligned} & T / O \\ & N o . \end{aligned}$ | 0 | EM | Remarks |
| Vet Sta Hosp (Com Z) | 8-560 | 4 | 78 | Establishes veterinary station hospital in the Com Z when justified by the number of animals in the area. Does not receive patients from the combat zcne. Capacity: 150 animals, normally; 300 in an emergency. Not mobile. Has a small number of motor vehicles for its own supply service. Weight of equipment: 25 -tons. Cubage: 1,461 cubic feet. |
| Hosp Center | 8-551 | $\begin{gathered} 46 \\ 1-W O \\ 2-N \end{gathered}$ | 310 | Furnishes the overhead for a hospital center of from 3 to 10 general hospitals. Includes a convalescent camp with a capacity of 1,000 . Convalescent camps at hospital centers have normally a total bed capacity equal to $20 \%$ of that of the center. Not mobile. General hospitals in the center have no transport. The center has sufficient ambulances to move patients between hospitals. The center requires motor transport, bakery, military police, finance, signal, postal, and laundry personnel in numbers depending upon the size and location of the center. |
| Aux Surgl Gp | 8-512 | $\begin{aligned} & 128 \\ & 70-\mathrm{N} \end{aligned}$ | 127 | Held in Com Z and teams sent forward when required. Reinforces surgical, evacuation, and general hospitals in times of stress by additional operating teams. The group has a total of 250 operating teams. Not mobile. Has a small number of motor vehicles for its own supply service and to move a few teams. |
| Gen Dispensary | 8-502 | 12 | 29 | 1 per GHQ. 1 per port of embarkation or debarkation. Others as required. Renders outpatient medical service at large headquarters. Must be attached for rations and quarters. Weight of equipment: 8-tons. Cubage 704 cubic feet. Not mobile. Has 1 amb; 2 car, passenger; 1 motorcycle. |
| $\begin{gathered} \text { Med Lab } \\ \text { (Gen) } \end{gathered}$ | 8-504 | 26 | 98 | 1 per Theater of Opns, if the size of the force in the theater justifies it. Conducts extensive epidemiological studies, researches, technical inspections and investigations. Manufactures biologics. Weight of equipment; 7-tons. Cubage: 345 cubic feet. Not mobile. Has sufficient transportation for its own supply service. |
| Hq Med Serv (Com Z) | 8-500-1 | $\begin{gathered} 26 \\ 2-\mathrm{N} \end{gathered}$ | 92 | 1 per Theater of Opns, if the size of the force in the theater and the organization of the Com Z justifies it. Provides overhead for administration of all medical activities in the Com Z. Not mobile. Must be attached for rations and quarters. |
| Med Dept Concentration Center | 8-505 | 5 | 21 | 1 per Theater of Opns, if the size of the force in the theater justifies it. Provides overhead for administration in the Com Z of medical units held as GHQ Res, those withdrawn from armies for rehabilitation, and those arriving from the $\mathbf{Z}$ of $I$. Weight of equipment: $1 / 2$-ton. Cubage: 284 cubic feet. Not mobile. Has sufficient motor transportation for the supply of the units stationed at the center. |
| Vet Co (Sep) | 8-99 | 7 | 184 | 1 per type army. Evacuates animal casualties to veterinary evacuation hospitals from division, corps, and army veterinary aid stations and veterianry clearing stations. 15 trks, $21 / 2$-ton with stock rack body; each has capacity for 6 horses. |

## Medical Units (Continued) :

| Unit | T/O <br> No. | 0 | $E M$ | Remarks |
| Med Exam- <br> ining Unit <br> (Avn) | $8-141$ | 6 | 14 | GHQ Res. Examines flying personnel assigned to air bases as <br> required. Not mobile. Has a small amount of motor trans- <br> port for its own supply. |

## - 31. Ordnance Units:

| 1 | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: |
| Unit | $\begin{aligned} & \text { T/O } \\ & \text { No. } \end{aligned}$ | 0 | EM | Remarks |
| Ord Co (Am) | 9-17 | 6 | 180 | 6 per army ord am bn. 1 per type air force. 2 required in Com $Z$ for each 15 days of supply for each type army served. Co Hq; Depot office; 1 Magazine Plat; 1 Serv Plat. Operates ammunition depots and ammunition supply points. For data on labor requirements, see paragraph 32. (Army QM service.) |
| Ord Co (Dep) | 9-18 | 6 | 180 | 1 per type army. 1 per type air force. 1 required in $\mathrm{Com} Z$ for each 15 days of supply for each type army. CoHq, Depot Office, 1 Storehouse Plat, 1 Serv Plat, 1 Guard and Labor Plat. Operates ordnance depot for general supplies. The total daily maintenance for a type army is about 150 tons. The company requires 20 truck tons of additional transportation, but no additional labor, for daily maintenance. 3 days of supply for a type ariny requires about 20,000 square feet of storage space, of which about $15 \%$ should be covered. |
| Ord Co Air Base | 9-167 | 4 | 60 | 1 per air base. Co Hq, Ord Sec, Maint \& Gen Supply Sec, Am Sec, Airdrome Sec, 2 tractor cranes \& trailers. 6 bomb trailers, 6 bomb service trucks, mise ord trks. |
| Ord Co (Avn) (Bomb or Pursuit) | 9-157 | 6 | 181 | 1 Co per air group. $\mathrm{Co} \mathrm{Hq} ; 1$ airdrome sec per Hq and Hq Sq ; 1 Airdrome Plat per Air Corps Sq as prescribed for unit served. 20 trks, bomb service; 40 trailers, bomb, misc trks. |
| $\begin{aligned} & \text { Ord Co } \\ & \text { (M Maint) } \end{aligned}$ | 9-7 | 6 | 140 | 2 per army ordnance maint battalion. 3 per type corps. 1 per AA brig of 3 regts. 1 per inf div, square. 1 per cav div. 1 air district or type air force Operates ord repair section, air force depot. Hq \& Sup Sec, Serv Sec, Arty \& Automotive Sec, Armory Sec, Instrument Sec. In the Com Z, 4 or 5 companies are required normally for each type army; usually employed in shops. Maint \& supply of unit to which assigned or attached. Equipment varied according to assignment. Completely mobile. |

Ordnance Units (Continued) :

| 1 | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: |

| $\begin{aligned} & \text { Ord Co } \\ & \text { (HvMaint) } \end{aligned}$ | 9-9 | 8 | 215 | 1 per army ordnance maintenance battalion. Companies are allotted from GHQ Res to heavy artillery and tanks as required. 2 are required normally in the Com Z for each type army, to operate shops. Maintenance beyond the capabilities of medium maintenance companies. Operate artillery and automotive repair centers. Usually established in army area, near ordnance depot. The company can operate in the field, but buildings with machine tools and foundry equipment greatly facilitate its operation. Completely mobile. |
| $\begin{aligned} & \text { Ord Co } \\ & \text { (Maint Ry) } \\ & \text { Arty) } \end{aligned}$ | 9-47 | 4 | 87 | 1 per ry arty regt. Co Hq, Serv Plat each Ry Bn. Maintenance, repair, inspections. |
| Ord Bn (Maint), Armd Div | 9-65 | 21 | 406 | 1 per armored div. $\mathrm{Bn} \mathbf{H q}, 2$ Ord Cos, each with Hq Section, Service Section, Arty \& Automotive Section, and Armament Section. |
| Ord Bn (Am) | 0-15 | 44 | 1,121 | 2 per type army. Each battalion includes 6 Ord Cos (Am). |
| Ord Bn (Maint \& Supply) | 9-115 | 33 | 705 | 1 per type army. 1 Ord Co (Hv Maint), 2 Ord Cos (M Maint), 1 Ord Co (Depot). |
| Ord Bn (Maint) (Corps) | 9-75 | 25 | 440 | 1 per type corps. Hq Det, 3 Ord $\operatorname{Cos}$ (M Maint). |

( 32. QUARTERMASTER UNITS:

QUARTERMASTER UNITS: (Continued)

QUARTERMASTER Units: (Continued)

Quartermaster Units: (Continued)

| 1 | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: |
| Unit | $\begin{aligned} & T / O \\ & \text { No. } \end{aligned}$ | 0 | EM | Remarks |
| $\underset{\text { (Serv) }}{\text { QM Bn }}$ | 10-65 | 15 | 912 | 6 per type army. 1 per type air force. Each 15-0 and 912EM. 4 QM Cos (Serv) per Bn , each $3-\mathrm{O}$ and 224 -EM. Forms general labor pool for handling supplies. Average rate of work: $1 / 2$-ton per man per hour for ten hours. 5 mtcls; 1 trk, $1 / 2$-ton, comd; 5 trks, $1 / 2$-ton, p/up; 20trks, 21/2-ton, cargo; 21 trailer, 1 -ton, cargo. |
| $\underset{\text { (Trk) }}{\text { QM Regt }}$ | 10-51 | 57 | 1,449 | 1 per type army. 3 QM Bns (Trk) per regt, each 15-0 and 461-EM, 4 QM Cos (Trk) per Bn. Constit.utes the nucleus of the army strategic transport pool and operates trucks for general use in the army area or in the Com Z. Each battalion has 192 trucks with a total capacity of 480 tons ( 640 with trailers). Each truck company has 48 trucks available for general use. Gas and oil are available in the regiment for a movement of 300 miles. 56 mtcls; 18 trks, $1 / 2$-ton, comd; 43 trks, $1 / 2$-ton, p/up; 620 trks, $11 / 2$ to $21 / 2$-ton, cargo; 12 tks, $21 / 2$-ton wrecker. |
| QM Co (Trk) | 10-57 | 3 | 110 | 8 per type air force. 2 per type corps. 4 per inf div (square) 1 per inf div (triangular or triangular, motorized). Co Hq ; 2 Trk Plats. The company has 48 trucks available for general use. |
| QMBn <br> (L Maint) | 10-25 | 21 | 767 | 3 per type army. Hq \& Hq Det, 4 QM Cos (L Maint). Performs third echelon motor maintenance for all QM motor vehicles of the troop units of the army or Com Z. Supplies, parts and accessories for motor vehicles. The battalion can serve 4,000 vehicles. 18 motorcycles; 5 trucks, $1 / 2$-ton, comd; 21 trks, $1 / 2$-ton, pick-up; 8 trks, $21 / 2$-ton wrecker; 16 trks, 4 -ton, wrecker, 86 trks, $21 / 2$-ton, cargo. |
| $\underset{\text { (L Maint) }}{\text { QM Co }}$ | 10-27 | 4 | 185 | 1 per type corps. 3 per type air force. 4 per QMM Bn (L Maint), 1 per QM regt, infantry division (square). Performs third echelon motor maintenance. 4 tricycles; 1 truck, $1 / 2$-ton, comd; 5 trucks, $1 / 2$-ton, pick-up; 2 trucks, $21 / 2$-ton, wrecker; 4 trucks, 4-ton, wrecker; and 21 trucks, 21/2-ton, cargo. |
| QM Co (Car) | 10-87 | 4 | 133 | 1 per type army. Furnishes passenger car transportation and motorcycle messengers for the headquarters served. 29 mtcls; 24 cars, pass; 29 trks, $1 / 2$-ton, comd; 5 trks, $1 / 2$-ton, pick-up; 6 Trks, $11 / 2$-ton. |
| QM Regt (HvMaint) | 10-41 | 61 | 3,141 | Com Z units. Hq \& Hq Det, 3 QM Bns (Hv Maint) with 3 QM Cos (Hv Maint) and 1 Depot Co, each. Operates unit repair, overhaul, reconstruction, and salvage shops for motor vehicles and motor transport supply depots. Each company and battalion is capable of operating alone. They can operate in the field without properly equipped shops but only at considerably reduced efficiency. |
| QM Co (Serv) | 10-67 | 3 | 224 | 2 per type corps. Labor pool. Hq \& 2 Plats. 160 men available for labor. Capacity 800 tons per day. |

Quartermaster Units: (Continued)

| 1 | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: |
| Unit | $\begin{gathered} \text { T/O } \\ \text { No. } \end{gathered}$ | 0 | EM | Remarks |
| QM Co (Gas Sup) | 10-77 | 2 | 117 | 1 per type corps. Co H \& Trk Plat. Distributes gas \& oil and operates corps, army, or GHQ filling station. Capacity: 15,700 gallons gas \& 300 gallons oil in 10 gallon cans. |
| QM Bn (Gas Sup) | 10-75 | 10 | 480 | 1 per type army. Hq \& Hq Det, 4 QM Cos (Gas Supply). Capacity: 62,800 gallons of gasoline and 1,200 gallons of oil, transported in 10 -gallon cans. 9 mtcls; 9 trks, $1 / 2$-ton, comd; 5 trks, $1 / 2$-ton, pick-up; 105 trks, $21 / 2$-ton, cargo. |
| QM Co (Dep-MT) | 10-48 | 4 | 300 | Assigned as needed. Storage and issue of motor transport supplies for first, second and third echelon maintenance of 3,000 vehicles. Tear-down and disposition of evacuated vehicles. |
| $\overline{\text { QM Sq (Rmt) }}$ | 10-95 | 28 | 718 | A GHQ unit. Hq \& Hq Det, 4 QM Trs (Rmt). Operates remount depots with a combined capacity of 1,600 animals. Each troop is capable of operating separately up to a 400 animal capacity. 6 mtels; 13 trks, $11 / 2$-ton; 32 wagons, escort. |
| QM Co ( Dep ) | 10-227 | 4 | 148 | 1 per type army. 2 per type air force. Furnishes enlisted specialists for technical supply operations of QM depots. Labor and transportation must be furnished from QM service units. Normal requirements for labor and transportation: 1 QM company (truck) and 1 QM company (service). 1 mtcl; 1 trk, $1 / 2$-ton, pick-up; 3 trks, $21 / 2$-ton. |
| $\underset{\text { (Bkry) }}{\mathrm{QM} \mathrm{Bn}^{2}}$ | 10-145 | 25 | 654 | Normally established in the Com Z, but may be attached to army or corps. $\mathrm{Bn} \mathrm{Hq} ; 4 \mathrm{QM} \operatorname{Cos}$ (Bkry), each with 5-0 and 158 -EM. Supplies fresh bread. Capacity up to 96,000 men. Each company is capable of operating alone. Can be set up for oparation within 3 to 4 hours and can furnish bread within 12 hours after being supplied. Has no transportation for movement. $6 \mathrm{mtcls} ; 1$ trk, $1 / 2$-ton, comd; 13 trks, $11 / 2$-ton, cargo. |
| QM Bn (Sterilization and bath) | 10-175 | 31 | 663 | A GHQ unit. Hq \& Hq Det; 4 QM Cos (Sterilization \& Bath). Conducts delousing, bathing and the issue of clean underwear. Operating capacity: 10,000 men per 10 -hour day. Transportation requirements for movement: Bn, 48 trucks, $21 / 2$-ton. Co: 12 trucks, $21 / 2$-ton. Capable of separate opertion to include sections. ( 4 sections per Co). 5 mtels; 7 triss, $1 / 2$-ton; 25 trks, $11 / 2$-ton, with trailers; 48 trailers, supply and sterilization and bath, 3-5 ton. |
| QM Bn (Ldry) | 10-165 | 23 | 1,196 | Normally established in Com Z. Hq \& Hq Det; 4 QM Cos (Ldry), with 4 Plats each. Operating capacity up to 160,000 men per week. Capable of decentralized operation by platoons. Transportation for movement must be provided. 9 mtles; 6 trks, $1 / 2$-ton; 21 trks, $11 / 2$-ton; 192 trailers, 5-9-ton, leundry. |

| Air Base Group | 1-411 | 42 | 658 | 6 SE | 1 per field air base and air force depot. May be reinforced by one or more Materiel Squadrons. Depot may also be reinforced by additional Air Base Groups. Provide personnel and equipment to reinforce permanent Air Bases when serving an Air Force; establish and operate Field Air Bases and Air Force Depots. Perform 2d echelon Air Corps maintenance. <br> Contains: Hq \& Hq Sqda, Air Base Gp, 1 Air Base Sqdn, 1 Materiel Sqdn. Air Base Squadron is non-mobile; is detached if Group is ordered into the field. |
| $\mathrm{Hq} \& \mathrm{Hq} \mathrm{Sqdn}$, Air Base Group | 1-412 | 23 | 225 | 0 | Operates all transportation in the Group, including vehicles assigned to Materiel Squadron. Has three $1 / 2$-ton trucks for instrument landing. |
| Air Base Squadron | 1-417 | 7 | 118 | 3 SE | Contains administrative overhead required to supplement the Corps Area Service Command troops at each permanent air base. Non-mobile unit. |
| Materiel Squadron | 1-413 | 12 | 315 | 3 SE | Operates 5 DP sections based on <br> 1 Hdqrs Sq <br> 1 Reconn Sq <br> 3 Combat Sqda <br> Each DP section consists of 1 officer 18 enlisted men. |

Chapter 2
TROOP MOVEMENTS
Section I. General ..... 35-53
II. Infantry Division (Square) ..... 54-58
III. Infantry Division (Triangular) ..... 59-64
IV. Cavalry Division (Horse) ..... $65-66$
67

## SECTION I

## GENERAL

35. Troop Movements; Introduction.-a. Basic road spaces.-Troop movement data shown in basic tables of road spaces, rates and lengths of marches, and time-lengths of motor columns are averages from field experience.
b. Examples.-The examples of tables of road spaces, troop movements by motor transport, and movements by rail for various types of divisions are based on Tables of Organization strength and are included as guides for the preparation of similar tables for units in the field. Tables for field use must conform to the variations of strength of units and the amount of transportation and equipment available. Regiments, separate battalions, and similar units should maintain tables showing road space requirements of their units based on actual strength and materiel on hand. Reports of subordinate units form the basis for tables of large units. However, a table based on actual strength of men and material may be worthless without proper evaluation of the weather, road conditions, hostile air or mechanized threats, or other variable factors affecting the troop movement. These basic figures are capable of great increase or decrease under extremes of the variable factors.

- 36. Basic Road Spaces.-The following values apply in computing road spaces except when greater dispersion is desired to reduce the effect of unfavorable factors mentioned in par. $35 b$ above:a. Foot troops, (at halt or marching): aYards
In column of twos, per man ..... 1.2
In columns of threes, per man ..... 8
In columns of fours, per man .....  6
b. Animal elements, (at halt or marching): a
Cavalry: ..... Yards
In column of fours, per anl ..... 1.0
In column of twos, per anl ..... 2.0
Single file, per anl ..... 4.0
For large units, columns of fours ..... 1.5
For large units, columns of twos ..... 3.0

FA,HD:

> Per animal
> 3
c. Motor elements, (at halt) bc

Motorcycle (solo or w/s/c) .-.-.-......................-. 5
Truck: $1 / 2$ to 3 -ton incl
$1 / 2$ to 3 -ton incl, with cargo tlr, or weapon in tow_...-14

Over 3-ton, with cargo tlr or weapon in tow ---.-.-.-. 20
Tractor:

Tank:

Other mechanized vehicles:
including personnel carrier, combat car, and
mortar carrier10

Average per vehicle for a mixed column of various types ....-._-10

## NOTES

a For time length of foot and animal elements in column see par. 37.
$b$ For road spaces for motor elements at various speeds see pars. 48 and 49. $c$ For time length of motor columns at varicus speeds see pars. 48 and 50.
d. Uses of tables:
(1) A battalion of infantry with 800 men marching in column of threes: $800 \times .8$ (see $a$. above) $=640$ yards road space.
(2) A regiment of cavalry with 1,200 animals in column of fours: $1,200 \times 1.5$ (see $b$. above) $=1,800$ yards road space.
(3) A battalion of field artillery, horse drawn, containing 400 animals: $400 \times 3$ (see $b$. above) $=1,200$ yards road space.
(4) A mixed motor column consisting of:

20 motorcycles @ 5 yards each (see $c$ above) 100 yards
30 mecz ren vehicles @ 10 yards each 300 yards 100 trucks ( $11 / 2$-ton) @ 10 yards each 1,000 yards 50 trucks ( $21 / 2$-ton) with trailers @ 14 yards each

700 yards
40 tanks (M) @ 8 yards each
Total road space (at halt)
320 yards
2,420 yards
Alternate solution: (see $c$ above) 240 vehicles (mixed) @ 10 yards each 2,400 yards

## - 37. Average Time lengths of Cavalry, Men on Foot, and AnimalDrawn Field Artillery Columns.

## Figure 4

## NOTES

This chart applies to columns of foot and animal elements.
This chart gives average time-length. Actual time-length may vary considerably, depending on conditions.
To use chart:
Determine the number of men on foot or animals in the column.
Locate this figure in vertical scale on left of chart.
Follow horizontal line to right to intersection with diagonal line indicating the proper foot or animal column and rate of travel.
From this intersection follow vertical line down to horizontal scale.
Read on horizontal scale average time-length of the column.
38. Rates and Lengths of Marches; Foot, Animal and Motor Elements.(1) - $a$. The following rates and lengths of marches are based upon modern vehicles, trained personnel, and favorable conditions of roads and weather:

|  | 1 | 2 | 3 | 4 | 5 | 6 (2) | 7 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| MISCELLANEOUS |  |  |  |  |  |  |  |
| 12 | Anl-d tns | 31/2 | 3 | 11/2 | 1 | 20 |  |
| 13 | Trks, ambs, mtz units (except M \& Hv arty) | 25 | $\begin{array}{\|l\|} \hline 25 \text { (lights) } \\ 10 \text { (nolights) } \end{array}$ | 8 | 5 | 175 |  |
| 14 | Cars, passenger | 35 | $\left\lvert\, \begin{aligned} & 35 \\ & 10 \text { (lights) } \\ & \text { (nolights) }\end{aligned}\right.$ | 8 | 5 | 250 |  |
| NOTES |  |  |  |  |  |  |  |
| (1) The rate of march of a column composed of elements with different rates of march is regulated by that of the slowest element. <br> (2) Greater distances than those given in column 6 may be covered under forced march conditions. (See paragraph 39.) |  |  |  |  |  |  |  |
| (3) Horse artillery marches at the rates of horse cavalry (line 9). |  |  |  | mands under favorable conditions, or for movement in open column. |  |  |  |
| (5) For movement over mountainous terrain, an additional allowance of 1 hour should be made for each 1,000 feet of climb. |  |  |  |  |  |  |  |

b. Marches in snow and extreme cold.-(1) Foot troops marching in snow without snowshoes or skis will have their mobility decreased. The decrease of mobility will depend on several factors, among which are depth and nature of the snow. Normally, snow of a depth of 24 inches or more will prohibit marching unless skis or snowshoes are used.

For especially equipped and adequately trained troops, the following rates of march are practicable:

|  |
| :---: |
|  |  |

Under favorable conditions the foregoing may be materially increased. Small bodies of well trained troops are capable of moving on skis 40 miles a day, under favorable conditions.
(2) Dog teams.-Average dog teams of 7 dogs and hauling a 500pound load are capable of moving 5 to 7 miles per hour for 6 to 7 hours daily; an average day's march being approximately 30 miles.
(3) Motor movement (wheel) in snow:

Depth of snow

6 -------------------------------------- Rear chains
6-18 _-_-_Chains all-around; and special tractor devices on leading vehicle (to break the trail)
18 and over
Snow plow required

- 39. Forced Marches; Foot and Animal Elements.-a. Seasoned troops and animals when well rested at the beginning of the march, with good weather and good roads, are capable of reaching their destination physically fit to engage in combat after making forced marchess as indicated on the following graph:
b. Examples of use of graph.-Assume it is desired to start a column of foot troops at daylight and accomplish a march of 33 miles. The graph shows that this distance will require a minimum elapsed time of $221 / 2$ hours. Such a march might be divided as follows:

$$
\begin{aligned}
& \text { First stage, } 18 \text { miles. (The time required for this stage } \\
& \text { is taken from the graph as } 9 \text { hours, this time being } \\
& \text { adjusted for somewhat increased short rest periods } \\
& \text { and for possible diminution in march rates during } \\
& \text { the latter part of the march.) } \\
& \text { A long rest halt of } \\
& \text { Second stage, } 15 \text { miles. (This is a normal stage and is } \\
& \text { calculated at normal march rates for the existing } \\
& \text { conditions of light or darkness. In this case it would } \\
& \text { be a night march.) } \\
& \text { Total time required }
\end{aligned}
$$

If, for example, a long rest halt of 8 hours is to be taken, the time required for the march would have been $241 / 2$ hours.

## Figure 5

40. Movement by Rail; Basic Data.-a. Speed of railvay trains.The average speed of military railway trains is approximately 20 miles per hour.
b. Time of loading and unloading.-Allow 3 hours for loading or unloading standard type troop trains and other trains carrying artillery, motorized units, and cavalry units. When only foot elements of a unit move by rail and other elements of the unit move overland, allow one-half hour for loading and one-half hour for unloading.
c. Train densities.-Train densities on single and multiple track railroads will vary greatly depending on the condition of track, number of passing sidings, terminal facilities, available rolling stock, and the like. At the average speed of 20 miles per hour, maximum train densities may be estimated as follows:
One track with two-way traffic _- 20 trains per 24 hours in each direction
 Two tracks with two-way traffic _-- 60 trains per 24 hours in each direction Two tracks with one-way traffic _-..-.-..--.-...- 120 trains per 24 hours Three tracks with two-way traffic _ 80 trains per 24 hours in each direction Three tracks with one-way traffic $\qquad$ 180 trains per 24 hours Four tracks with two-way traffic _-120 trains per 24 hours in each direction Four tracks with one-way traffic -.-- --...- -.-.-. 240 trains per 24 hours
d. Railroad officials should be consulted for accurate information as to train densities and speeds of trains possible for a rail movement.

- 41. Types and Composition of Rallway Trains.-a. Composition of railway trains, grouped for planning purposes, used for troop movements in the combat zone is as follows:

| 1 | 9 | 3 | 4 | 5 | 6 | \% | 8 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { Type } \\ & \text { of } \end{aligned}$ | Composition (1) |  |  |  |  |  | Total Number of Cars |
|  | Pulman | Coach | Box (2) (5) | Flat | Stock | Caboose (3) |  |
| A | 1 | 11 | 4 | 18 |  | (1) | 34 |
| B | 1 | 6 | 4 | 23 |  | (1) | 34 |
| C. | 6 | 22 | 6 |  |  | (1) | 34 |
| D(4) | 1 | 5 | 2 | 26 |  | (1) | 34 |
| E | 1 | 5 | 3 |  | 25 | (1) | 34 |

NOTES
(1) The above table contemplates the use of standard railroad equipment. Standard trains of specially constructed light equipment may also be prescribed in the theater of operations.
(2) Includes one combination kitchen-supply car per company.
(3) For train crew, not required when coaches are used.
(4) For movement of armored units when wheel vehicles and certain personnel, march separately. Personnel with this type train includes 2 men per vehicle.
(5) Baggage cars may be used.
b. In the zone of the interior, standard passenger coaches or sleepers will generally be used for transporting personnel (paragraph 42).

- 42. a.-Passenger Capacity Table for Standard U. S. Coaches:

| 1 | 2 | 3 | 4 |
| :---: | :---: | :---: | :---: |
| Item | Day coach (1) | Tourist sleeper | Standard sleeper (2) |
| Length in feet. | 65 to 75 | 65 to 75 | 65 to 80 |
| Number of sections......................................................... | None | 13 to 16 | 12 to 16 |
| Maximum seating, 2 men to each double seat (3)............. | 60 to 70 | 52 to 64 | 53 to 64 |
| Maximum seating, 3 men to each 2 double seats (3)............ | 45 to 48 | 39 to 48 | 40 to 48 |
| Maximum sleeping, 2 men per berth............-...-.-...............--- | None | 52 to 64 | 53 to 64 |
| Sleeping capacity, 3 men per section................................... | None | 39 to 48 | 40 to 48 |
| Sleeping capacity, 1 man per berth.......-...---........................ | None | 26 to 32 | 27 to 32 |

## NOTES

(1) Limited number steel coaches, 70 feet long or over, available.
(2) Standard sleeper - 12 sections and drawing room or 16 sections and no drawing room.
(3) Double seat - a seat having the capacity of 2 men.

## b. Dimensions and Capacities of Cars:

## NOTES

(1) There are no standard dimensions of commercial cars. The figures given are for some types in common use. (The $40-$ ton stock car comes in 32 lengths varying from $35^{\prime} 7^{\prime \prime}$ to $41^{\prime} 10^{\prime \prime}$. All types have similar variations in capacity and all dimensions.)
(3) Ice capacity, 4 tons.
(3) Ice capacity, 5 tons.

## - 43. Maximum Bulk Loading for Freight Cars; Standard Gauge RAllway:

| 1 | 2 | 3 | 4 | 1 | 2 | 3 | 4 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Meat................... | 15 | 24 | 35 | Tools, truck.................. | 30 | 40 | 50 |

## NOTES

A rated capacity of a car in tons does not mean that this rated tonnage of all articles can be carried. This table shows the tonnage of military freight which can be carried in freight cars of common rated capacities.

## - 44. Railway Car Space Requirements:

The following space requirements are used as a basis for computing car requirements for movements by rail.

The figures shown give the car space requirements of items of equipment and transport. The length of flat cars is assumed to be 40 feet.

> Inches of car space required
1/6 Flat Car:
Motorcycle with side car ..... 94
Tricycle, motor ..... 97
1/4 Flat Car:
Tractor, light ..... 108
1/3 Flat Car:
Caisson and limber, $75-\mathrm{mm}$ gun or howitzer ..... 160
Cart and reel, artillery, 6-horse ..... 160
Gun, $37-\mathrm{mm}$, A.T. ..... 160
Gun, $75-\mathrm{mm}$, with or without limber ..... 160
Trailer, 2 -wheel, 1 -Ton Cargo ..... 136
Tractor, medium ..... 134
Trailer, water, 250 -gallon ..... 128
Wagon, mountain, 4-horse ..... 146
Inches of car space required
1/2 Flat Car:
Ambulance, field, motor ..... 225
Car, light, passenger ..... 188
Car, medium, passenger ..... 208
Car, scout ..... 201
Carrier, 81 -mm, half-track ..... 192
Compressor, air, motorized, $11 / 2$-ton ..... 225
Reel, battery, 4-horse ..... 198
Gun, $37-\mathrm{mm}$, A.A. ..... 183
Gun, $75-\mathrm{mm}$, A.T. ..... 239
Howitzer, $105-\mathrm{mm}$ ..... 236
Locator, sound, trailer, mounted ..... 210
Tank, light ..... 175
Tank, medium ..... 216
Tractor, heavy, 10-ton, artillery ..... 191
Trailer, command post, 2 -wheel ..... 240
Trailer, cargo, 4 -wheel ..... 204
Truck, artillery repair ..... 190
Truck, automotive repair ..... 240
Truck, communications, $11 / 2$-ton ..... 234
Truck, cargo, $11 / 2$-ton ..... 234
Truck, dump, $11 / 2$-ton ..... 234
Truck, $1 / 2$-ton, command ..... 190
Truck, emergency repair ..... 190
Truck, kitchen, $11 / 2$-ton ..... 234
Truck, machine shop ..... 240
Truck, panel delivery ..... 234
Truck, pick-up, $1 / 2$-ton ..... 191
Truck, pick-up, $11 / 2$-ton ..... 234
Truck, reconnaissance, 8-passenger ..... 195
Truck, reconnaissance, 12 -passenger ..... 224
Truck, small-arms repair ..... 240
Truck, spare parts ..... 240
Truck, tank, 500 -gallon ..... 240
Truck, tool and bench ..... 240
Truck, welding ..... 240
$2 / 3$ Flat Car:
Grader, road, motorized, $71 / 2$-ton ..... 302
Gun, 3 -in, AA or $90-\mathrm{mm}$ ..... 258
Gun, $155-\mathrm{mm}$ ..... 417
Howitzer, $155-\mathrm{mm}$ ..... 257
Howitzer, $240-\mathrm{mm}$ (for each of the four loads) ..... 320
Searchlight, 60 -inch, mobile ..... 263
Shovel, gasoline, motorized $71 / 2$-ton ..... 270
Shovel, gasoline, motorized, 15 -ton ..... 304
Truck, $11 / 2$-ton, 15 -foot special body ..... 260
Truck, cargo, $21 / 2$-ton ..... 257
Truck, 4 -ton, cargo ..... 244
Truck, 5 -ton, cargo-dump ..... 275
Truck, 5 -ton, wrecking ..... 344
Truck, $7^{1 / 2}$-ton, prime mover ..... 284
Truck, 10 -tinn, wrecker ..... 290
Water purification unit ..... 258
45. The Following Rules Govern the Loading of Mechanized and Motorized army Equipment On Open Top Cars.-Conforms to re- quirements of the Association of American Railroads.
These rules have been formulated for the purpose of providing uniform and safe methods of loading equipment pertaining to the mechanized and
motorized units of the United States Armed Forces on open top cars, and the materials specified under the various figures are minimum requirements.

The loading of units for which no definite figure has been provided, should conform as nearly as possible to the best example that can be derived from the figures shown.

In the loading, the hazards connected with high speed, multiple track railroads, tunnels, electrical conductors and the necessity of protecting human life and property should be borne in mind, and every effort made to properly and safely secure all loading before offering it to the railroads for movement.
a. General Rules.-(1) Selection and Preparation of Car.-Cars must be inpected to see that they are suitable to carry loads safely to destination. Cars should have good sound floors, and all loose nails or other projections not an integral part of the car, should be removed. Nails, bolts, etc., necessary in car construction, when loose, should be made tight rather than removed.
(2) Brake Wheel Clearance.-See Figure 6. Note minimum clearances.
(3) Maximum Load Weights.-In determining the maximum weight of load, the following shall govern, except where load weight limit has been reduced by the car owner.

(4) Idler Cars-to be used as follows:
(a) When load projected beyond end sill of carrying car.
(b) When idler car is used, 4 in . clearance must be maintained below overhang portion of load and any part of idler car.
(c) When idler car is used, space on the idler may be utilized for loading provided, the ends of such material are located not less than 2 ft . from ends of overhanging portions.
(5) Clearing Limits.-The height and width of load must be within the clearance limits of the railroads over which it is to be moved. Army and Railroad officials must check on clearances prior to each move.
(6) Stakes, Braces, Blocks, Cleats, Wedges.-Such items must be of hardwood, fir, spruce, or long leaf yellow pine, straight grained and free from impairing knots.
(7) Wire.-Wire used for securing loads should be No. 8 Ga. black annealed wire.
(8) Nails.-The following sizes of nails are specified throughout the various figures:

$$
\begin{array}{ll}
20-\mathrm{d} & (4 \text { inches.) } \\
40-\mathrm{d} & \text { (5 inches.) }
\end{array}
$$

(9) Fuel in Tanks of Individual Units.-Paragraph 105, Interstate Commerce Commission Regulations. "Automobiles, motorcycles, tractors, or other self propelled vehicles, equipped with acetylene gas cylinders or gasoline or other fuel tanks are exempt from specification packaging and labeling requirements providing such cylinders and tanks are securely closed. When offered for transportation by carriers by rail or highway, drainage of fuel tanks is not required. When offered for transportation by rail express, fuel tanks must have been drained and securely closed."
(10) Brakes on Individual Units.-All pieces of equipment which are provided with brakes, must have the brakes applied before moving over the railroads.

Figure 6

Brake Wheel Clearance

[^2](11) Minimum Requirements for Securing Light and Medium Tanks. -Flat, or Drop End Gondola Cars. See Fig. 7.

| Item | No. of Pcs. | Description. |
| :---: | :---: | :---: |
| A | Brake wheel clearance. See Fig. 6. |  |

Brakes must be applied.
See General Rules for further details.

(12) Minimum Requirements for Securing Half Tracts.-Flat, or Drop End Gondola Cars. See Fig. 8.

| Item | No. of Pcs. | Description. |
| :---: | :---: | :---: |
| A |  | Brake wheel clearance. See Fig. 6. |
| B | 4 | 6 in. $x 8$ in. $x 24$ in. blocks, (pattern 3 ), cut to fit contour of crawler tread. Nail heel of block to car floor with five 40-D nails and toe-nail that portion under crawler tread to car floor wiith two $40-\mathrm{D}$ nails. Not required when Items " F " and " G " are used. |
| C | 2 | 2 in. x 4 in. x 36 in. cleats, (pattern 2 ). Nail to car floor with three 40-D nails. |
| D | 4 | 6 in. x 8 in. x 24 in. blocks, (pattern 3). Height at point of contact with tire must be not less than 4 in . from car ffoor. Locate in front and rear of wheels. Nail heel of block to car floor with three 40-D nails and toe-nail that portion under tire to car floor with two 40-D nails before Items " E " are applied. Not required when Items " $F$ " and " $G$ " are used. |
| E | $\begin{gathered} \frac{4}{\text { with }} \\ \text { Items "D" } \\ \mathbf{2} \text { with } \\ \text { Items "F" } \end{gathered}$ | 2 in. $x 4$ in. $\times 36$ in. cleats, (pattern 2). Nail lower piece to car floor with three 40-D nails and top piece to the one below with three $40-\mathrm{D}$ nails. May be nailed to top of Items " $F$ ", if used, in which case only one is required at each location. |
| F | 4 | 6 in. $x 8$ in. timbers, (pattern 4), length not less than overall width of vehicle at car floor, chamfered 2 in. at point of contact with tires and crawler treads. Apply as shown in sketch 2 and secure to prevent displacement. Not required when Items " $B$ " and " $D$ " are used. |
| G | 16 | 2 in. x 4 in. x 12 in. cleats, (pattern 1. Locate against Items " $F$ ", lengthwise of car, at center line of tire or crawler tread. Nail lower piece to car floor with three $40-\mathrm{D}$ nails and top piece to the one below with three 40-D nails. Not required when I'tems " $B$ " and "D" are used. |
| H | 4 | 4 strands, 2 wrappings, No. 8 Ga . black annealed wire. Pass front wires through spokes, or holes in disc wheels and through stake pockets. Pass rear wires between equalizer and gudeon (above springs) and attach to nearest stake pocket. Tighten all wires only enough to remove slack. Not required when loaded in gondola cars. |
|  | akes must be General R | plied. <br> for further details. |

(13) Minimum Requirements for Securing Four Wheel Trucks and Passenger Cars, (Single or Dual Wheels).-Flat, or Drop End Gondola Cars. See Fig. 9.

## (14) Minimum Requirements for Securing Six Wheel T'rucks (Single or Dual Wheels).-Flat, or Drop End Gondola Cars. See Fig. 10.

| Item | No. of Pcs. | Description. |
| :---: | :---: | :---: |
| A |  | Brake wheel clearance. See Fig. 6. |
| B |  | VACANT. |
| C |  | VACANT. |
| D | 8 | 6 in. $\times 8$ in. $x 24$ in. block, (pattern 3). Height at point of contact with tire must be not less than 4 in . from car floor. Locate in front and rear of front wheels, in front of outside intermediate wheels and in back of outside rear wheels. Nail heel of block to car floor with three 40-D nails and toe-nail that portion under tire to car floor with two $40-\mathrm{D}$ nails before Items "E", are applied. Not required when Items " $F$ " and " $G$ " are used. |
| E | $\begin{gathered} \quad 4 \\ \begin{array}{c} \text { for front } \\ \text { wheels. } \\ 8 \\ \text { for rear } \\ \text { wheels. } \end{array} \end{gathered}$ | 2 in. $x 4$ in. $x 36$ in. cleats, (pattern 2). Nail lower piece to car floor with three 40-D nails and top piece to the one below with three 40-D nails: They may, if of sufficient length, be nailed to top of Items " $F$ ", when used, in which case only one is required at each location. |
| $\boldsymbol{F}$ | 4 | 6 in. $x 8$ in. timbers, (pattern 4), length not less than overall width of vehicle at car floor, chamfered 2 in . at point of contact with tires. Apply as shown in sketch 2 and secure to prevent displacement. Not required when Items " $D$ " are used. |
| G | 16 | $2 \mathrm{in} . \times 4 \mathrm{in} . \times 12 \mathrm{in}$. cleats, (pattern 1). Locate against Items " $F$ ", lengthwise of car, at center line of tire. Nail lower piece to car floor with three 40-D nails and top piece to the one below with three 40-D nails. Not required when Items "D" are used. |
| H | 6 | 4 strands, 2 wrappings, No. 8 Ga. black annealed wire. Pass through spokes, or holes in dise wheels and through stake pockets, tightening only enough to remove slack. Not required when loaded in gondola cars. |

Brakes must be applied.
See General Rules for further details.

(15) Minimum Requirements for Securing 37, 75, 90 and 105 mm Mounted Gun or Howitzer.-Flat, or Drop End Gondola Cars. See Fig. 11.

(16) Minimum Requirements for Securing 155 mm Gun $M-1-8^{\prime \prime}$ Howitzer Carriage.-Flat Cars. See Fig. 12.

| Item | No. of Pcs. | Description. |
| :---: | :---: | :---: |
| A | Brake wheel clearance. See Fig. 6. |  |

(17) Minimum Requirement for Securing 3 Inch Anti-Aircraft Gun.Flat, or Drop End Gondola Cars. See Fig. 13.

| Item | No of Pcs | Description. |
| :---: | :---: | :---: |
| A |  | Brake wheel clearance. See Fig. 6. |
| B | 8 | 6 in. $\times 8$ in. $\times 24$ in. blocks, (pattern 3). Height at point of contact with tire must be not less than 4 in . from car floor. Nail heel of block to car floor with three 40-D nails and toe-nail that portion under tire to car floor with two 40-D nails before Items " C " are applied. |
| C | 8 | 2 in. x 4 in. $\times 36$ in. cleats, (pattern 2). Nail lower piece to car floor with three $40-\mathrm{D}$ nails and top piece to the one below with three $40-\mathrm{D}$ nails. |
| D |  | VACANT. |
| E |  | VACANT. |
| F | 4 | Brace, (pattern 7), length $1 / 4$ in. longer than the distance between axel and car floor. Place between car floor and axle to partially relieve weight on tires. Nail each to car floor with six 40-D nails. |
|  | akes must b General R | applied. <br> es for further details. |

(18) Minimum Requirement for Securing 37 mm Anti-Aircraft Gun. —Flat, or Drop End Gondola Cars. See Fig. 14.

| Item | No. of Pcs. | Description. |
| :---: | :---: | :---: |
| A |  | Brake wheel clearance. See Fig. 6. |
| B | 8 | 6 in. $x 8$ in. x 24 in. blocks, (pattern 3). Height at point of contact with tire must be not less than 4 in . from car floor. Nail heel of block to car floor with three $40-\mathrm{D}$ nails and toe-nail that portion under tire to car floor with two 40-D nails before Items "C" are applied. |
| C | 8 | 2 in. $x 4$ in. $x 36$ in. cleats, (pattern 2). Nail lower piece to car floor with three $40-\mathrm{D}$ nails and top piece to the one below with three 40-D mails. |
| D |  | VACANT. |
| E |  | VACANT. |
| F | 4 | Brace, (pattern 7), length $1 / 4 \mathrm{in}$. longer than the distance between axle and car floor. Place between car floor and axle to partially relieve weight on tires. Nail each to car floor with six 40-D nails. |
| G | 4 | 4 strands, 2 wrappings, No. 8 Ga . black annealed wire. Place through holes in wheels, which must be the same distance from car floor, secure to stake pockes and tighten only enough to remove slack. |

## Brakes must be applied.

See General Rules for further details.

(19) Minimum Requirements for Securing One or More, Two Wheel Motorcycles.-Flat, or Drop End Gondola Cars. See Fig. 15.

| $\begin{gathered} \text { Item } \\ \text { A } \\ \mathbf{B} \end{gathered}$ | No. of Pes. | Description. |
| :---: | :---: | :---: |
|  |  | Brake wheel clearance. See Fig. 6. |
|  | 1 | Cradle, (pattern 5). Nail to car floor with six 20-D |

## NOTES

* Patterns 1 and 4, designated with an asterisk, cover alternate methods of loading and are not required when patterns 2 and 3 are used on Figures 7, 8, 9 and 10.
No pattern numbers have been assigned Items $C$ and $E$ of Figures 15 and 16, as the number and length of pieces will depend upon the number of vehicles loaded.
For diagram of patterns, see Figure 17.

Figure 17
Pat. 7 item.f
- 46. Motor Movements.-a. Truck capacities for troop movement.The capacity of motor transportation for movement of foot troops depends upon the rated capacity of the transportation employed, the type of body on the vehicles, and the method of carrying personnel. Normal capacities for trucks carrying personnel with rifles, packs, and extra ammunition, with no additional cargo:

|  |  | Mbn |
| :--- | :---: | :---: |
| Truck, $1 / 2$-ton | (excluding driver) | $\mathbf{5}$ |
| Truck, $11 / 2$-ton | $"$ | $\mathbf{1 5}$ |
| Truck, $21 / 2$-ton (or larger) | $"$ | $\mathbf{2 5}$ |

NOTES

1. Above capacities are based upon 5 men (with equipment) per thousand pounds rated capacity of truck, exclusive of the driver.
2. The body of the $21 / 2$-ton artillery prime mover is the same size as that of the $11 / 2$-ton cargo truck.
3. When $1 \frac{1}{2}$-ton dump trucks or $21 / 2$-ton artillery prime movers carry the loads shown above, some personnel will be required to stand.
4. Because of partial loading of some trucks, the probable location of entrucking points must be considered in determining the number of trucks required for movement of large units.

For example: Hq Co , Sery Co, and each bn of an inf regt should be computed separately; the total for the regiment being the total for its component parts. The required number of trucks determined in this manner will be somewhat greater than the number determined by dividing the total number of foot troops in the regiment by the capacity of trucks employed.
b. Truck capacities for animals.-

Horses or mules
Truck, $11 / 2$-ton (exceptional) 2 plus 2 men with equipment Truck, $21 / 2$-ton, cargo 4 plus 4 men with equipment Semi-trailer, $41 / 2$-ton 8 plus 8 men with equipment, harness and forage for 1 day.

- 47. Form for Tabulating Numbers of Trucks Required for Movement by Motor Transport (Tactical Movements) Infantry Division. -The following form may be used to tabulate the approximate number of trucks required to move the foot elements, with individual equipment, of the infantry division, or of component units thereof:

| 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $1 \quad$ Unit (2) | T/O strength | Actual strength | Transported in organic motors | Strengths for which transportation must be furnished | Number of trucks required |  |
|  |  |  |  |  | $11 / 2-$ | $\begin{aligned} & 21 / 2 \\ & \text { ton } \end{aligned}$ |
| 2 Rifle Co |  |  |  |  |  |  |
| 3 Rifle Plat |  |  |  |  |  |  |
| 4 Weapons Plat |  |  |  |  |  |  |
| 5 Hv Wpn Co |  |  |  |  |  |  |
| 6 Cal . 30 MG Plat |  |  |  |  |  |  |
| 7 Cal .50 MG Plat |  |  |  |  |  |  |
| 8 81-mm Mort Plat |  |  |  |  |  |  |
| 9 Inf Bn (w/Com Sec, Bn Sec Serv Co, \& Bn Sec Med Det, atchd) |  |  |  |  |  |  |
| $10 \mathrm{Hq} \& \mathrm{Hq}$ Co \& Band Inf Regt (less 3 Bn Com Secs) |  |  |  |  |  |  |
| 11 AT Co |  |  |  |  |  |  |
| 12 Serv Co (less 3 Bn Secs) |  |  |  |  |  |  |
| 13 Med Det, Inf Regt (less 3 Bn Secs) |  |  |  |  |  |  |
| 14 Inf Regt (w/2 atchd chaplains) |  |  |  |  |  |  |

| 16 MP Co Inf Div |  |  |  |  |  |  |
| 17 Fwd Ech Div Hq \& Hq Co (1) |  |  |  |  |  |  |
| 18 Rr Ech Div Hq \& Hq Co (1) |  |  |  |  | . |  |
| $19 \mathrm{Div} \mathrm{Hq} \mathrm{\&} \mathrm{Sp} \mathrm{Trs} \mathrm{(foot} \mathrm{troops)} \mathrm{(1)}$ |  |  |  |  |  |  |
| $20 \mathrm{Inf} \mathrm{Div} \mathrm{(total)} \mathrm{(foot} \mathrm{troops)}$ |  |  |  |  |  |  |

NOTES
(1) Officers of DHQ are transported in cars of Quartermaster.
(2) The units of an infantry division usually moved by means of their own transport are not included in the above table.
■ 48. Time-Length of Motor Columns.-a. Close column.-When each driver closes to safe driving distance from the vehicle ahead, the time-length of the column may be taken as .08 minutes per vehicle.

Thus, a column of 300 vehicles would have a time-length of $300 \times .08$, or 24 minutes ( 750 vehicles per hour). (See paragraph $48 c$ (1) for additional data.
b. Open column.-When the tactical situation requires extended distance as protection from air attack, the motor column must be elongated to a density of not more than 12 trucks per mile of highway or about 150 yards of road space per truck. See paragraph $48 c$ (2) for additional data.
c. Rates of motor movements.-(1) Close column:

| 1 | 2 | 3 | 4 | 5 | 6 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { Speed } \\ (m p h) \end{gathered}$ | Road space per truck (yards) | Density per mile | Trucks per hour passing a given point | Maximum tonnage hauled by 11/2-ton trucks (per hour) | tonnage hauled ō 2112-ton trucks (per hour) |
| 10 | 23.5 | 75 | 750 | 1,125 | 1,875 |
| 15 | 35.5 | 50 | 750 | 1,125 | 1,875 |
| 20 | 47 | 37 | 750 | 1,125 | 1,875 |
| 25 | 59 | 30 | 750 | 1,125 | 1,875 |
| 30 | 70.5 | 25 | 750 | 1,125 | 1,875 |
| 35 | 82 | 21 | 750 | 1,125 | 1,875 |

(2) Open column (10 trucks per mile).

| 1 | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: |
| Speed ( $m p h$ ) | Road space per truck (yards) | Trucks per hour passing a given point | tonnage hauled by 11/2-ton trucks (per hour) | tonnage hauled by 21/2-ton trucks (per hour) |
| 10 | 176 | 100 | 150 | 250 |
| 15 | 176 | 150 | 225 | 375 |
| 20 | 176 | 200 | 300 | 500 |
| 25 | 176 | 250 | 375 | 625 |
| 30 | 176 | 300 | 450 | 750 |
| 35 | 176 | 350 | 525 | 875 |

NOTE
To determine data for any truck density less than 10 per mile the road space (column 2) should be increased and data shown in columns 3, 4, and 5 should be decreased in proportion to the density employed.

For example: To move at 20 miles per hour with a truck density of 6 per mile:
Road space
$1760 \div 6=293$ yards
Trucks per hour passing a given point
Maximum tonnage hauled ( $11 / 2$-ton trucks)

$$
\begin{aligned}
& =.6 \mathrm{X} 200=120 \\
& =.6 \mathrm{X} 300=180
\end{aligned}
$$

Maximum tonnage hauled ( $21 / 2$-ton trucks) $=.6 \times 500 \equiv 300$
For truck densities greater than 10 per mile the road space is decreased and data shown in columns 3, 4, and 5 is increased in like manner.
See Fig. 8.
This chart applies to motor movements in which vehicles keep closed up to safe driving distances. Safe driving distance is assumed to be constant ( $142 / 3$ yards, center to center, for cars or trucks up to 3 -ton) for speeds up to 5 miles per hour and to increase with the speed for rates above 5 miles per hour.
Chart shows average road space. Actual road space may vary $25 \%$ either way, depending on conditions.
To use chart:
Determine the number of motor vehicles in column, disregarding trailers or towed weapons.
Locate this figure in vertical scale on left of chart.
Follow horizontal line to right to intersection with diagonal line indicating the proper rate of travel.
From this intersection follow vertical line down to horizontal scale.
Read on horizontal scale the average road space of the column.
b. Open column.-Road space of a motor movement in open column may be obtained by dividing the number of motor vehicles in column (disregarding trailers) by the average density (number of vehicles per mile).

- 49. Average Road Space of Motor Columns at Various Speeds. -a. Close Column.

## - 50. Average Time Lengths of Motor Columns at Various

Speeds.-a. Close Column.

## NOTES

This chart applies to motor movements in which vehicles keep closed up to safe driving distances. From 10 miles per hour to 35 miles per hour the safe driving distance varies directly with the speed, and the time-length of a column is therefore constant. At 5 miles per hour or less the safe driving distance is assumed to be constant ( $142 / 3$ yards, center to center, for cars or trucks up to 3 -ton) and the time-length of a column therefore varies inversely with the speed.
Chart shows average time-length. Actual time-length may vary $25 \%$ either way, depending on conditions.
To use chart:
Determine the number of motor vehicles in column, disregarding trailers or towed weapons.
Locate this figure in vertical scale on left of chart.
Follow horizontal line to right to intersection with diagonal line indicating the proper rate of travel.
From this intersection follow vertical line down to horizontal scale.
Read on horizontal scale the average time-length of the column.
b. Open column.-Time length of a motor movement in open column may be obtained by the following formula:

Number of motor vehicles in column
$-\quad$ =Time length (in hours).
Density (vehicles per mile) x speed (mph)

- 51. Shuttle Movements.-a. Definition.-Troop movement by shuttling is a movement by motor in which all or a portion of the trucks make successive trips in moving both cargoes and troops.
b. Time formula.-The following formula is useful for determining the total time of movement of a unit in shuttling:

$$
\text { Hours required }=\frac{3 \times \text { distance in miles }}{\text { Speed in miles per hour }}+T
$$

The figure " 3 " indicates the number of trips for each shuttle; for example, one trip to move foot troops, a return trip, and a third with organic cargo.
' $T$ '' (a variable), represents the number of hours consumed in unloading and loading personnel and equipment, in turn-arounds at forward and rear assembly areas, and in closing the column into its area of destination. When two routes are available for the movement a value of 3 may be assumed for "T" with a reasonable factor of safety. When more than two routes are available the value of " T " may be reduced.

Speed in miles per hour represents the average speed of the vehicles in the movement.

- 52. March Graphs and March Tables.-a. The field order for a march may be accompanied by a march table, particularly when the details of the march are not subject to change and can be foreseen. The march table affords a convenient means of transmitting to subordinates the many details pertaining to the march, the inclusion of which in the body of the field order would tend to complicate or make it unduly lengthy.
b. A march graph is the simplest method of obtaining data required for a march table or order. It shows the approximate location at any hour of the head or tail of each serial, providing the march proceeds as scheduled. The march graph is prepared on cross-section paper, using one sheet for each route. The vertical scale to the left, with point of origin at the bottom, serves as a distance scale in miles and should show the relative locations along the route of critical points where coordination of the movement is required. The horizontal scale provides a time scale in hours, beginning at the left with the earliest hour at which the first serial may start the march.
c. A serial is represented on the graph by a horizontal line, drawn to scale, equal to the time-length of the serial. This line is plotted opposite the point on the vertical scale, corresponding to the initial point of the serial; the left of the line being plotted above the hour, on the horizontal scale, at which the serial begins the march. From this left end a line is drawn upward at a slope representing the rate of march (at 10 miles per hour the slope equals 10 miles on the vertical to 1 hour on the horizontal scale). This sloping line represents the march of the head of the column. The intersection of this line with the horizontal line from any point along the route, if projected down to the time scale, will show the time the head arrives at such point. A line drawn from the right end of the horizontal line representing the time-length of the serial and parallel to the line representing the head of the column will represent the tail of the serial. Time of clearances may be obtained as explained for the head of the serial. The movement or location of a unit after it leaves the route represented on the distance scale, or passes the rear boundary of its destination (new bivouac area), may be shown on the graph by dotted lines.
$d$. If the hour at which a march must be completed is the only time factor known, the graph may be constructed starting with the tail of the column at the destination and working back to obtain the hour of starting for the head of the column. The graphs of all serials may be adjusted to allow for crossing columns or other interferences. The need for and the means of making such adjustments may be visualized. In preparing the march graph a safety factor of 15 to 30 minutes should be allowed between serials at critical points on the route. In the march table this time is divided between serials, the major portion usually being assigned to the leading serial. A small gap of about 5 minutes should be reserved during which the route is clear.

53. Examples of March Graphs and March Tables.-a. The division commander has directed that the 1st Engr Bn, 1st QM Bn, 1st Med Bn, and the 1st Infantry, in army reserve, move under cover of darkness from their present bivouacs, areas A and B to areas C and D , beginning at 7:00 PM, 17 October 19_, under the following conditions.

(1) Movement to be made without lights and to be completed prior to 5:00 AM, 18 October 19...
(2) Route A is available for the movement but CR 515 is reserved for army columns from 11:36 PM to 12:06 AM and from 2:36 AM to 3:00 AM.
b. The following EXAMPLE OF MARCH GRAPH-ROUTE A is the graph used by the division staff, 1st Division in planning the march.
Figure 21

## NOTES:

1. Time Lengths.
(a) Serial 1-2650 men on foot in column of threes at 2 mph (Chart par. 37) := $\mathbf{3 6} \mathbf{m i n}$.
(b) Serial $2-229$ vehicles at 10 mph (Chart par. 50) $=19 \mathrm{~min}$.
(c) Serial $8-282$ vehicles at 10 mph (Chart par. 50 ) $=23 \mathrm{~min}$.
2. o Indicates remark: in march table.

Column 1: Designation of unit to be entered, as "1st Infantry Division."
Columns 5, 6, and 7: Based on periodic reports of subordinate units, the actual strength in men and vehicles should be entered.
Column 8: Number of men on foot $\times .8$ (men in column of threes) $=$ yards; $\div 1760=$ miles.
Column 9: For a column of vehicles of all types, 10 yards per vehicle is used as the average road space.
Column 10: Road spaces of foot elements on the march are identical with road spaces at the halt.
Column 11: Number of vehicles $\times 23.5$ ( $2.35 \times \mathrm{mph}$ ) per vehicle.
Column 12: Number of vehicles $\times 60$ yards ( $2.35 \times \mathrm{mph}$ ) per vehicle.
Column 13: Number of men on foot $\times .011=$ minutes at $21 / 2 \mathrm{mph}(\times .0135$ at 2 mph$)$.
Column 14: Number of vehicles $X .08=$ minutes.
Column 15: Men on foot (column 7) divided by 15 for $11 / 2$-ton trucks; divided by 25 for $21 / 2$-ton trucks. (See Note 4, paragraph 46, and paragraph 47.)

Form for an Abridged Table-Road Spaces and Time-Lengths, Infantry Division (Square) (Continued) :

Column 1: Designation of unit to be entered, as "1st Infantry Division."
Columns 5, 6, and 7: Based on periodic reports of subordinate units, the actual strength in men and vehicles should be entered.
Column 8: Number of men on foot $\times .8$ (men in column of threes) $=$ yards; $\div 1760=$ miles.
Column 9: For a column of vehicles of all types, 10 yards per vehicle is used as the average road space.
Column 10: Road spaces of foot elements on the march are identical with road spaces at the halt.
Column 11: Number of vehicles $\times 23.5$ ( $2.35 \times \mathrm{mph}$ ) per vehicle.
Column 12: Number of vehicles $\times 60$ yards $(2.35 \times \mathrm{mph})$ per vehicle.
Column 13: Number of men on foot $\times .011=$ minutes at $21 / 2 \mathrm{mph}(X .0135$ at 2 mph$)$.
Column 14: Number of vehicles $X .08=$ minutes.
Column 15: Men on foot (column 7) divided by 15 for $11 / 2$-ton trucks; divided by 25 for $21 / 2$-ton trucks. (See Note 4, paragraph 46, and paragraph 47.)
55. Shuttling: Infantry Division (Square).-a. Refer to paragraph 51 for general formula for shuttling, and to paragraph 46, 47 and 56 for transportation requirements and availability.
b. The following example of standing operating procedure for a motor movement by shuttling for an infantry division (square) should be used only as a guide from which to prepare shuttle plans upon the actual transportation available and the personnel to be moved:
c. Example based on WD T/O November 1, 1940.
(1) Plan.-Motor Movement 2 is a shuttle movement in which the division moves in its organic motors with Brigade Combat Teams abreast, behind a screen of other troops adequate to protect the movement against strong frontal attack. One infantry battalion from each BCTC and one antitank battery remain in the rear area to guard dumped loads. The remainder of the combat units of the division move in the first shuttle. Each BCT moves on two or more routes and protects the immediate front of its movement with small advance guards. The flanks are protected by mobile flank guards operating under division control, with foot elements carried in trucks of the Quartermaster Regiment. Trucks of the Quartermaster Regiment are augmented by sufficient kitchen, and other administrative trucks (which are dumped in the rear area) to move foot troops of the first shuttle. At the conclusion of the first shuttle such trucks return to pick up their normal loads. Foot troops of the second shuttle are moved in trucks of the Quartermaster Regiment.
(2) Warning Order.-Preliminary arrangements for this shuttle movement will be inaugurated upon receipt of order "Alert for motor movement two," or "Alert for motor movement 2, after (designated hour)."

COMPOSITION OF FLANK GUARDS
(To cover movement of both shuttles)

FLANK GUARD NO. 1

- 56. Example of G-3 Work Sheet Showing Availability of Cargo Trucks ( $11 / 2,21 / 2$, and 4 -ton) in the Infantry Division (Square) for Movement of Foot Troops (based on WD T/O November 1, 1940).-a. This table shows a priority which might be established within a division for the availability of organic motor transportation of units scheduled to move in the second shuttle, to be used for movement of foot troops of the first shuttle. With slight modification it might also serve to show availability of transportation to be returned by units of the first shuttle for movement of foot troops of the second shuttle.

## G-3 WORK SHEET

AVAIHABILITY OF MOTOR TRANSPORT FOR TROOP MOVEMENT

## NOTES

1 The availability of cargo trucks and the priority of such availability are command decisions.
2 Reference prime movers see par. 344 FM 100-5 (FSR).
3 Ordinarily the Sig Co and the Div Hq and Div Hq and MP Co, by pooling transport, can move all the personnel and equipment pertaining to these organizations in $11 / 2$ round-trips and at the same time perform essential functions (assuming that the car Co of the QM Regt also transports Div Hq personnel).
4 Unit motor repair vehicles are not available for other purposes. They usually accompany the motor vehicles of the unit.

* Includes 3 trucks for personnel of the AT Co.

## SECTION III <br> INFANTRY DIVISION (TRIANGULAR)

59. Form for an Abridged Table-Road Spaces and Time-Lengths,
Infantry Division (Triangular).

## NOTES

Column 1: Designation of unit to be entered, as "1st Infantry Division."
Columns 5, 6, and 7: Based on periodic reports of subordinate units, the actual strength in men, and vehicles should be entered.
Column 8: Number of men on foot $X .8$ (men in column of threes) $=$ yards; $\div 1760=$ miles.
Column 9: For a column of vehicles of all types, 10 yards per vehicle is used as the average road space.
Column 10: Road spaces of foot elements on the march are identical with road spaces at the halt.
Column 11: Number of vehicles $\times 23.5(2.35 \times \mathrm{mph})$ per vehicle $=$ yards $\div 1760=$ miles.
Column 12: Number of vehicles $\times 60$ yards $(2.35 \times \mathrm{mph})$ per vehicle $=$ yards $\div 1760=$ miles.
Column 13: Number of men on foot $X .011=$ minutes at $21 / 2 \mathrm{mph}(\times .0135 \mathrm{at} 2 \mathrm{mph})$.
Column 14: Number of vehicles $X .08=$ minutes.
Column 15: Men on foot (column 7) divided by 15 for $11 / 2$-ton trucks; divided by 25 for $21 / 2$-ton trucks. (See Note 4, paragraph 46, and paragraph 47.)

Column 10: Road spaces of foot elements on the march are identical with road spaces at the halt.
Column 11: Number of vehicles $\times 23.5(2.35 \times$ mph per vehicle $=$ yards $-1760=$ miles.
Column 12: Number of vehicles $\times 60$ yards $(2.35 \times \mathrm{mph})$ per vehicle $=$ yards $-1760=$ miles.
Column 13: Number of men on foot $\times .011=$ minutes at $21 / 2 \mathrm{mph}$ ( $\times .0135$ at 2 mph ).
Column 14: Number of vehicles $X .08=$ minutes.
Column 15: Men on foot (column 7) divided by 15 for $11 / 2$-ton trucks; divided by 25 for $21 / 2$-ton trucks. (See Note 4, paragraph 46, and paragraph 47.)

## 60. Shuttling: Infantry Division (Triangular).-a. Refer to paragraph 51 for general formula for shuttling, and to paragraph 46, 47 and 61 for transportation requirements and availability.

b. The following example of standing operating procedure for a motor movement by shuttling for an infantry division (triangular) should be used only as a guide from which to prepare shuttle plans based upon the actual transportation available and the personnel to be moved:
c. Example based on WD T/O November 1, 1940.
(1) Plan.-Motor Movement I is a shuttle movement in which the division moves in its organic motors in two shuttles, behind a screen of other troops adequate to protect the movement against strong frontal attack. CT 1 and CT 2, with reinforcements from division troops, constitute the first shuttle. It moves on two or more routes and protects the immediate front of its movement with small advance guards. In addition to its organic transportation, sufficient additional trucks from units of the division not moving in the first shuttle are attached to CT 1 and CT 2 to transport by motor all their personnel and equipment. At the conclusion of the first shuttle, trucks belonging to units of second shuttle return to pick up prescribed loads and move CT 3 (reinforced). Necessary trucks from units of first shuttle dump loads in forward area and return to assist in moving foot troops of second shuttle. Division troops move behind the second shuttle without distance.
(2) Security.-The Reconnaissance Troop protects the movement by conducting reconnaissance to the front and flanks. Battery D 4th Field Artillery Battalion is held in mobile reserve to provide antitank protection. None of its organic transportation is employed for other purposes during the movement.
(3) Warning Order.-Preliminary arrangements for this shuttle movement will be inaugurated upon receipt of order "Alert for motor movement one," or "Alert for motor movement one, after (designated hour)."

ASSIGNMENT OF TRANSPORT (MM 1)

- 61. Example of G-3 Work Sheet Showing Av̄ailability of Cargo Trucks ( $11 / 2,21 / 2$, and 4 -ton) in the Infantry Division (Triangular) for Movement of Foot Troops $a$ (based on WD T/O November 1, 1940).$a$. This table shows a priority which might be established within a division for the availability of organic motor transportation of units scheduled to move in the second shuttle, to be used for movement of foot troops of the first shuttle. With slight modification it might also serve to show availability of transportation to be returned by units of the first shuttle for movement of foot troops of the second shuttle.

## NOTES

Infantry

1. Attached Med Det of 2 Officers, 27 men figured with each Bn.
2. The additional Med Det of 4 Officers, 19 men, 5 vehicles of headquarters section are placed on train No. 4 in each Regt.
3. The Bn Sect, Com Plat, Regt Hq Co, 1 Officer, 17 men figured with each Bn.
4. The Bn Sect, Trans Plat, Serv Co, 1 Officer, 19 men figured with each Bn.

Field Artillery.
5. Band Included with the Hq \& Hq Btry Div Arty.
6. Attached Medical included with Hqtrs Btry.
7. Requirements for $75-\mathrm{mm}$ gun batteries same as for $105-\mathrm{mm}$ howitzer.

NOTES
Assumptions:
67 officers and 6,491 men ride overland in the 1,560 motor vehicles of the division.
Units, including atchd Med and Ch: average per train: + (or -) 40 officers, 931 men.
Arrangements made for motors to meet trains at detraining points, or for necessary motor service there to be provided from other sources.
All units except Inf regts and Div Hq and Hq and MP Co completely motorized.
b. (CT).—Regimental Combat Team All moving by Rail.

NOTES
(1) $\mathrm{H}-0: 12=\mathrm{H}$ (hour) minus 12 minutes from forward entraining point.
(2) $\mathbf{H}=1: 08=\mathbf{H}$ (hour) plus 1 hour and 8 minutes.
(3) B-2d Inf-1 $=$ Type B train, 2d Infantry, 1 st train.
(4) $\mathrm{H}=0: 40=\mathrm{H}$ (hour) plus 40 minutes.
(5) $1: 20=H$ (hour) plus 1 hour and 20 minutes.

Procedure.-Determine the entraining points to be used (based on loading facilities and convenience of foot troops) and tentatively the units and numbers of trains to load at each.

Block off on the work sheet for each entraining point, by units, the number of trains to load there (for each echelon successively, if the movement is to be by echelon).

Number of trains in the order of their departure from the entraining area.

Check to see that each train is allowed time for loading (at least 3 hours between trains from one entraining point if vehicles and materiel are to be loaded. Where only foot elements move by rail and motorized elements of the unit move overland, allow one-half hour for loading and one-half hour for unloading).

Check to see that the train density prescribed by the Railway Transportation Service is not exceeded and that time is not unnecessarily lost; for instance, with a train density of 36 , that one train can leave the entraining area every forty minutes. Make necessary adjustments.

Determine the time at which each successive train is to leave the entraining area.

Determine and enter the time required for trains from each entraining point to reach the forward entraining point (limit of the entraining area).

Enter, for each train successively, the time it must leave its entraining point to reach the forward point at the regular intervals of train density (at least, not more than that interval).

Prepare one entraining table (Form 11, SOFM 101-5) for each entraining point, designating the specific units or elements to be loaded on each train.

A detraining table often is not made. When desired, the running time from the entraining point to the detraining point may be added to the time of departure from the entraining point to give the expected day and hour of arrival.

## NOTES

Column 1: Designation of unit to be entered, as "1st Cavalry Brigade."
Columns 6, 7, and 8: Based on periodic reports of subordinate units, the actual strength in men, animals, and vehicles should be entered.
Column 9: The road spaces of animal elements at a halt and moving are identical. Average road space for large units (column of twos) $=3$ yards $\times$ number of animals.
Column 10: For a column of vehicles of all types, 10 yards per vehicle is used as the average road space.
Column 11: Number of vehicles $\times 60$ yards $(2.35 \times \mathrm{mph})$ per vehicle $=$ road space at 25 mph .
Column 12: Using average road spaces per animal (large units, 3 yards per animal), the time-length per animal at 6 mph is .017 minutes. Number of animals $\times .017$ minutes $=$ minutes, time-length.
Column 13: Number of vehicles $\times .08=$ minutes, time-length at 25 mph .
Columns 9,10 , and 11: For convenience, entries may be made in miles rather than yards.

| VIII. | Field Army | 146-149 |
| IX. | GHQ Reserve Units | 150-153 |
| X. | Air Force --..---- | ? |

## Section I

## GENERAL

## 68. Classification of Supply.-For convenience supplies are divided into Class I, II, III, IV, and V (See FM 100-10)

- 69. Basic Weights for Computation of Loads.-Miscellaneous.

| Item | Unit |  |
| :---: | :---: | :---: |
| A-ration a | ea | 5.12 lbs net; $6: 22$ lbs packed. |
| B-ration 6 | ea | Average for planning-6 lbs per ration. |
| C-ration $\mathbf{c}$ | ea | 5.1 lbs packed. |
| D-ration d | ea | 3/4 pound. |
| Grain ration | ea | 10 lbs average for horses and mules. |
| Grain ration | ea | 5 lbs per animal aboard ship. |
| Hay ration | ea | 14 pounds per animal. |
| Wood for cooking | per ration | 2.8 lbs per ration. |
| Gasoline for cooking | per kitchen | 10 gal per day per 3-unit kitchen. |
| Gasoline for trucks | unit mile | The amount in gallons required to move every motor vehicle of a unit one mile. |
| Oil for trucks | gallons | Approximately $3 \%$ of the gallons of gasoline required. |
| Water | 10 gal in container 5 gal in container | 109 lbs per container.e |
| Oil | 10 gal in container 5 gal in container | 93 lbs per container.e |

## NOTES

aA-ration contains items of fresh food and is perishable.
$b \mathrm{~B}$-ration is the same as the A-ration with nonperishable items substituted for perishable items.
$c$ C-ration consists of prepared canned meals in individual cans.
$d \mathrm{D}$-ration consists of three prepared chocolate bars each weighing four ounces.
$e$ Average for planning- 100 pounds per container.
$f$ Average for planning- 50 pounds per container.

## NOTES

$a$ The DAY OF SUPPLY given in the above table is based on the following assumptions: major operations against an enemy equally well trained and equipped, home territory or territory adjacent thereto, temperate climate, and a highly industralized theater of operations. The quantities given in the table are intended to serve the need of basic reference data on the subject for planning purposes only.
$b$ Includes mail, sales commissary, and recreational supplies.
$c$ The figure of five pounds per man per day for gasoline and oil is only approximate. Specific computations should be made per par. 85 for each operation.
$d$ Exclusive of road metal, railway ballast, and fortification materials.
$e$ These figures refer to essential combat supplies only. Lists of items that constitute essential combat items are published from time to time by the War Department or by the theater commander.

E 84. Diagram of Requisition and Shipment of Class III Supplies.
Figure 27

- 85. Estimates of Gasoline Expenditure.-The factors controlling gasoline requirements in military operations are:
a. Movement distance (MD) is the distance in miles that the center of mass of a unit is displaced. On a march this distance is measured from center to center of successive bivouac areas.
b. Supply distance (SD) is the average one-way distance between supply points and the troops.
c. Variables (V), consisting of internal travel, reconnaissance, warming up of engines, and abnormal periods of time required in low-gear operation. These items differ in each situation with the character of operation, season of the year, weather, roads and terrain and must be estimated in accordance with conditions. Under average conditions, a constant of 10 unit miles of travel will usually cover these variables for estimating purposes.

The unit mile of gasoline is the amount of gasoline in gallons required to move every vehicle in the unit one mile. For small organizations having a preponderance of one type of vehicle, specific computations are required to determine the amount of gasoline necessary to move every vehicle in the unit one mile. For example: a small unit of 15 cargo trucks that from experience average 10 miles per gallon, three motorcycles that average 30 miles per gallon, and six passenger cars that average 15 miles per gallon. To move all vehicles of the unit one mile, under average conditions will require:

For trucks,
For motorcycles,
For passenger cars,

$$
\begin{array}{r}
15 \times 1 / 10 \text { of a gallon=}=1.5 \mathrm{gal} \\
3 \times 1 / 30 \text { of a gallon= } .1 \mathrm{gal} \\
6 \times 1 / 15 \text { of a gallon=}=\frac{.4 \mathrm{gal}}{2.0 \mathrm{gal}}
\end{array}
$$

The unit mile of gasoline for this organization is two gallons.
Experience in field exercises has shown that in large organizations containing a great number of all types of vehicles, such as an infantry or cavalry division, corps troops or army troops the average consumption of gasoline is approximately 10 miles per gallon per vehicle regardless of type of vehicle. The unit mile of gasoline in gallons for such organizations is therefore one-tenth the number of gasoline consuming vehicles in the unit.

The total consumption of gasoline by a large organization while moving from one point to another is greater than the unit miles of gasoline multiplied by the distance between the two points. This is due to a number of factors, including the fact that supply vehicles must move to a supply point and return to the unit at its new location. Therefore, it becomes necessary to determine an arbitrary figure-known as a unit mile of travel-which when multiplied by the unit mile of gasoline for the unit will give the total consumption of gasoline required.

To determine the predicted expenditure of gasoline in the operation of the large units shown in graphs in paragraph 87 it is only necessary to compute the number of unit miles of travel involved and the amount of gasoline in gallons may be read directly from the graph (Fig. 28, par. 87). To determine the number of unit miles of travel (UM) the following formula is used:

$$
\mathrm{UM}=\mathrm{MD}+.4 \mathrm{SD}(1)+\mathrm{V}
$$

Example:
Infantry Division (Triangular)
Movement (MD) $\quad=20$ miles of travel

Supply Distance (SD) (1) average one-way $=50$ miles of travel
Variable (V) (average conditions) $\quad=10$ miles of travel

$$
\begin{aligned}
& \mathrm{UM}=20+(.4 \times 50)+10 \\
& \mathrm{UM}=50
\end{aligned}
$$

Fifty unit miles of travel for a triangular division, under the conditions stated, amounts to 8600 gallons (fifty on the vertical scale of the chart is equivalent to 8600 gallons on the horizontal scale.

[^5]- 86. Prescribed Loads of Class III Supply.-A reserve of gasoline and oil in containers is carried in each unit. As far as practicable, initial distribution of this reserve will be made to each motor vehicle. Each vehicle sent to any army supply point replenishes its supply at some convenient gasoline supply point established by army at or en route to the army supply point. Vehicles remaining in the forward areas are resupplied by exchanging empty containers for full ones brought forward from gasoline and oil supply points by regimental or division transportation.
- 87. Graph of Estimated Gasoline Consumption.

(1) 80 by the automatic riffeman and 120 by the assistant automatic rifleman -- all in 20 -round magazines.
(2) issued prior to combat - 100 to the automatic rifleman and 80 to the assistant automatic rifleman in 20 -round magazines; 120 to the assistant automatic rifleman in 60 -round bandoleers. 520 retained in combat train as a reserve.
(3) 80 by each automatic rifleman, 120 by each assistant automatic rifleman and each ammunition carrier - all in 20 -round magazines; 40 by each ammunition carrier in 5 or 8 -round clips (see ammunition for the rife).
(4) 468 to be issued prior to combat - 100 to each automatic rifleman and 80 to each assistant automatic rifleman in 20 -round magazines; 96 to each assistant automatic rifleman in 48 -round banddoleers; 192 to each ammunition carrier in 48-round bandoleers (see ammunition for the M1 rifle); 384 retained in combat train as a reserve.
(5) 500 to be issued prior to conabat - 100 to each automatic rifleman, 80 to each assistant automatic rifleman and each ammunition carrier in 20 -round magazines; 120 to each assistant automatic riffeman and each ammunition carrier in 60 -round bandoleers. 360 retained in combat train as a reserve.
(6) 96 to be issued prior to combat in 48 -round bandoleers. 96 retained in combat train as a reserve. (See ammunition for the Browning automatic riffe, M1918A2.)
(7) 120 to be issued prior to combat in 60 -round bandoleers.
(8) In mobilization, all ammunition for the U.S. rife, M1 is packed and issued in 8-round clips in 48 -round bandoleers in boxes.
(9) All in magazines.

(1) The data, other than antiaircraft artillery; given in the above table are based on such statistics as are available from World War sources and serve as a guide for estimating quantities to be shipped to ammunition depots or ammunition supply points for various types of operations. Data given under antiaircraft artillery are based on modern antiaircraft tactics. These data are not to be used for computing ammunition expenditures for short periods of time during an action.
(2) For number of rounds per unit of fire, see paragraph 90 and 92 .
(3) Forces in contact but neither side attacking.
(4) Data given in this table are suitable for computation of requirements in field exercises.

## 94. Field Artillery Ammunition Expenditures.

## NOTES

(1) To transport the number of mines shown, except for engineer units, requires attachment of additional trucks to the unit by higher authority.
(2) Number of mines shown under engineer units are those authorized by T/BA, 1 November, 1940. Number of mines shown for other units are recommended.
(3) Antitank mines weigh 10 pounds each:

1 $1 / 2$-ton truck-load $\qquad$ 300 mines
21/2-ton truck-load
.500 mines
96. Allocation of Ammunition.

NOTE: The staff procedure illustrated above for the allocation of ammunition is for the Square Infantry Division. However, it is applicable to all divisions. In the Triangular Division the allocation for artillery units is routed direct to S-4 Division Artillery. The allocations for other units is routed direct to regiments and separate units.

- 97. Ammunition Reports.

## $\longrightarrow$ Route of report.

## - -m Information.

For form of report see par. 98.
NOTE: Ammunition reports are made periodically by the Unit in conformity with instructions of the next higher Commander. In the Triangular Division the reports from Artillery Units are routed from battalion to S-4 Division Artillery. Those from other Units are sent direct from regiments and separate units to the Division Ordnance Officer.

* To be filled out as accurately as circumstances permit.
(1) Includes stocks in (Corps) (Army) Depots, shown in last line. Corps will report on Corps Depots; Army will report on Army Depots.
(2) These lines filled out for calibers of $75-\mathrm{mm}$ and above.

## INSTRUCTIONS

This is the report on ammunition of all types submitted by ordnance officers of Divisions, Corps and Army to the next higher unit and to G-4. It covers a specified period. The hour at which the rep. rt closes is uniform throughout the Army and is designated by Army orders.
It is a summary that shows for the 24 hours (or other pariod) the activity of the artillery and air force bombing, and the status of ammunition supply of all types. Important items are reported daily. Less important items are reported at longer intervals.
The headings are self-explanatory.
Three or more copies are required: 1 for file; $\mathbf{1}$ for munitions officer of next higher unit; 1 for artillery commander of next higher unit.

- 99. Grenades, Hand.-Hand grenades are issued according to anticipated requirements, usually at the rate of 25 grenades per day per rifle company.
- 100. Loading of Motor Vehicles.-The caution plate attached to each cargo vehicle shows the recommended maximum pay loads on roads and cross country, maximum towable load, and the maximum safe speed of the vehicle. The practices of overloading and the use of excessive speed encroach upon the safety factors placed in the vehicle by design. These practices result in excessive maintenance requirements, in shortening the life of the vehicle, and also may cause immediate breakdown of the vehicle.

Under normal conditions allowable speed to be used should conform to the data contained on caution plates. The normal load of the vehicle should conform to its rated tonnage capacity. However, in the computation of loads the rated tonnage capacity will be considered as in acldition to the weight of the driver and assistant driver ( 200 lbs . each).

- 101. Labor.-a. For planning purposes labor requirements for handling supplies are computed on the average of $1 / 2$-ton per man per hour for ten hours each day.
$b$. The maximum number of men that can be employed advantageously in loading or unloading one freight car is eleven (one foreman and ten laborers).
c. In the field or at a depot, trucks can be loaded or unloaded at the rate of 20 minutes per truck regardless of tonnage if sufficient labor is available. The number of trucks that can be loaded or unloaded simultaneously is dependent upon the amount of labor available and the conditions existing at the loading or unloading point.

## Section II

## INFANTRY DIVISION (SQUARE)

■ 102. Methods of Supply.-In the infantry division (square) the general methods of supply are:
a. Supply of regiments and separate units by the division services employing transportation under division control. This method of supply frequently requires transfer of loads and the maximum amount of labor and transportation. It is used when army supply points, because of distance or bad roads, are not readily accessible to unit trains. This method is called unit distribution.
b. Regiments and separate units draw supplies directly from army supply points using regimental and separate unit transportation. This method of supply does not require transfer of loads between trucks, saves time, and reduces labor requirements to a minimum. This method of supply is used when army supply points are readily accessible to unit trains. This is known as railhead distribution.
c. Supply by a combination of the above methods as directed by the division commander based on the peculiarities of the situation and the condition and availability of transport in the several units of the division.

- 103. Procurement of Supplies.-In the field, supplies are obtained in the division:
a. Automatically.
b. By daily telegram.
c. By requisition.
d. As the result of establishing a credit.
e. By local exploitation.
- 104. Automatic Class I Supply.-Automatic supply of Class I supplies results from arrangements made with higher authority for the daily or periodic shipment from supply points to divisions of fixed quantities of supplies determined on the basis of experience as necessary. Requisition, daily telegram, or call is unnecessary on the part of the division but its changes in location must be reported to the army to determine destination of shipment. Overages received by the division are placed in division or railhead (truckhead) reserve. Shortages, when they occur, are made up from this reserve. When periodic shipments are employed, the duration of the period should not be greater than the number of days of supply carried in the division. Supplies so shipped are received by the division quartermaster and distributed to units.
- 105. Daily Telegram.-Class I and III supplies are usually obtained by daily telegram (requisition) from the division to the army quartermaster giving strength of the unit in men and animals and the amount of gasoline and oil expended in the preceeding 24 hour period. A copy of the daily telegram should be sent to the railhead officer serving the division for his information.
- 106. REQUISITION.-All classes of supplies may be obtained by requisition through appropriate special staff officers of the division. Requisitioning is the normal procedure in obtaining Class II and Class IV Supplies. Requisitions within the division are consolidated by the special staff officer concerned. No requisition should include articles issued by two or more services nor should articles of different classes be listed on the same requisition. All requisitions are numbered serially and the serial number is prefixed by an abbreviation indicating the service which issues the supplies. Consilidated requistions are prepared in quadruplicate. One copy is retained by the division and three copies forwarded to the army. When acted upon by the army, two copies are forwarded to the army supply point designated to furnish the supplies and one is retained for file. The army supply point retains one copy as a property record and uses the other copy as a check list in checking the supplies out of stock. When the articles desired are not available in an army supply point, two copies of the requisition are forwarded by the army to the regulating officer, who retains one as a followup copy and forwards one to the communication zone depot designated to ship the supplies. No unit should duplicate, on later requisitions, items called for on previous requisitions until they have been notified that such items have been stricken from previous requisitions. Prompt action must therefore be taken on each requisition and the unit notified where and when to send transportation for the supplies, or when and to what point shipment will be made.

107. CREDITS.-A credit is a definite quantity of supply placed at the disposal of the commander of an organization for a prescribed period of time. In effect, the establishment of a credit is tantamount to prior approval of a requisition and thereby makes supplies available to the designated organization without loss of time incident to administrative action.

Credits may be established for any class of supplies and are generally employed in furnishing Class $V$ supply (ammunition).

In establishing credits for ammunition, the numbers of rounds by caliber and type are prescribed as available for a definite period of time. In theaters of operation where a unit of fire has been adopted that establishes a definite number of rounds per weapon by type of ammunition, the unit of fire is used to express the amount of credit allocated.

In establishing credits for other classes of supply, the articles considered by the theater commander as essential to combat are listed by number. In theaters of operation where a list has been published enumerating articles by number that constitute a day of supply, credits are established in terms of days of supply. Articles not considered essenial to combat are placed in a low priority and are obtained by requisition.

The commanding general, theater of operations, on recornmendations of the chiefs of services, determines what constitutes a unit of fire and a day of supply for his theater.

- 108. Procurement By Local Exploitation.-Supplies accumulated by the several processes of exploitation are distributed to troops through the regular supply channels of the services. Exploitation of local resources in hostile territory is effected by purchase, requisition on civil officials or systematic collection by force. The method to be used is a command decision. - 109. Trains of the Division.-The train of a unit is that portion of the unit's transportation with its accompanying personnel which operates under the immediate orders of the unit commander primarily in supply, evacuation, and maintenance. Although certain trucks are assigned prescribed loads, their use is not limited to transporting such loads. Except for vehicles used for the movement of active weapons such as prime movers and weapon carriers, all of the trucks of a unit are considered as a pool of transportation to be used as required.

Trains are designated as company (battery), battalion, or regimental, preceded where appropriate by its functional designation.
Examples:
Ammunition train, 1st Infantry.
Kitchen train, 1st Battalion, 1st Infantry.
Medical train, 1st Battalion, 1st Field Artillery.
1st Medical Regiment (Battalion).
1st Quartermaster Regiment (Battalion).
1st Engineer Regiment (Battalion).

- 110. Shipping and Maintenance Requirements.-Square Division.

111. Cargo Vehicles of the Infantry Regiment, Rifle Used in Supply, Evacuation and Maintenance. (T/O 7-11 Oct. 1, 1940):
a. Primarily tactical (also used for supply purposes): (1) Weapon carriers:

| $\begin{gathered} \text { Company } \\ \quad o r \\ \text { Detachment } \end{gathered}$ | Vehicles | Load transported |
| :---: | :---: | :---: |
| Rifle Co (9 per Regt) | 2 per Co | One truck carries EM, $360-\mathrm{mm}$ mort, and $60-\mathrm{mm}$ mort am. Other truck carries EM, 2 LMG, and cal . 30 MG am. |
| Heavy Weapons Co (3 per Regt) | 16 per Co as follows: 4 each cal . 30 MG Plat 4 each cal . 30 MG Plat 4 each cal . 50 MG Plat 4 each 81-mm Mort Plat | Each carries EM, 1 cal . 30 MG , am, and water chests. Same load as above. <br> Each carries EM, 1 cal . 50 MG , and am. <br> Each carries EM, $181-\mathrm{mm}$ Mort, and am. |
| $\begin{gathered} \text { AT Co } \\ \text { (1 per } \\ \text { Regt) } \end{gathered}$ | 21 per Co |  |
|  | CoHq <br> 3 Wpn carriers | Each carry EM, 37-mm am, and equipment. |
|  | 3 Plats, each with 6 Wpn carriers | Each Plat: 4 each carry EM, 37 -mm am, and tows one $37-\mathrm{mm}$ gun. 2 each carry EM and $37-\mathrm{mm}$ am. |
| $\mathrm{Hq} \& \mathrm{Hq}$ Det Bn (3 per Regt) | 2 per Bn Det | Each carries EM, and Pioneer and Demolition Equipment |

(2) Communication trucks:

| $\begin{gathered} \text { Company } \\ \text { or } \\ \text { Detachment } \end{gathered}$ | Vehicles | Load transported |
| :---: | :---: | :---: |
| $\begin{gathered} \text { Hq } \& \text { Inf Regt }^{\mathrm{Hq}} \mathbf{C o} \end{gathered}$ | 11 per Co |  |
|  | $\mathrm{Hq} \& \mathrm{Co} \mathrm{Hq} \&$ Band 1 truck, $11 / 2$-ton | Carries EM and CP Equipment |
|  | Regtl Sec 4 trks, 1/2-ton | 2 each carry EM and wire equipment; 2 each carry EM and radio equipment. |
|  | Each Bn Sec (3) 2 trucks, $1 / 2$-ton | One carries EM and wire equipment One carries EM, wire and radio equipment |

(3) Maintenance section:
Reatl Serv Co: 4 trucks, $1 / 2$-ton, Wpn carrier......... Each carries EM and maint equipment 5 trucks, $11 / 2$-ton, cargo. $\left\{\begin{array}{l}\text { One carries 1-O, EM, maint equipment } \\ \text { Four carry EM and maint equipment }\end{array}\right.$
(4) Medical train:
Each Bn Sec: \{One carries 1-O, EM, Bn set, aid sta equipment (less tent) 4 trucks, $1 / 2$-ton, Wpn carrier......... Three carry EM (including litter bearers)
RegtlSec: 2 trucks, $11 / 2$-ton, cargo.. (One carries EM, tentage (reserve of medical supplies) (One carries EM, Hq set, aid sta equipment
c. Miscellaneous.-Organic vehicles of the regiment not included above:
Passenger car ..... 1
Mtcl, $w / \mathrm{s} / \mathrm{c} /$ ..... 27
Truck, $1 / 2$-ton, command, reconnaissance. ..... 35
Truck, $1 / 2$-ton, radio ..... 2
Truck, $1 / 1 / 2$-ton, Hq Co (band instruments) ..... 2
Trucks, $11 / 2$-ton, AT Co (personnel carriers) ..... 3
Total Vehicles ..... 70
d. Summary:
CARGO VEHICLES USED FOR SUPPLY, EVACUATION, AND MAINTENANCE (INFANTRY REGLMENT)
(Summary T/O 7-11, October 1, 1940)

(1) Also used for supply purposes. Shown here so that a complete picture may be obtained of all vehicles used for supply, evacuation, and maintenance.
(2) In addition, 2 trucks, $11 / 2$-ton, of Hq Co carry band instruments and 3 trucks, $11 / 2$-ton, AT Co are personnel carriers. Total 45 trucks, $11 / 2$-ton.

|  | 1 | 20 | 20 |
| 1-ton trailer, ammunition. | 2 | 20 | 40 |
| Total number of rounds normally carried in battery.. |  |  | 240 |

(1) Resupply loads are same as normal loads for similar type vehicle in Service Battery.
e. Service Battery, 155-mm Howitzer, Truck-Drawn:

| Type vehicle | $\begin{gathered} \text { Number } \\ \text { in } \\ \text { battery } \end{gathered}$ | Maximum number of rounds carried |  | Total number of rounds carried |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Good roads | Bad roads crosscountry | Good roads | Badroads crosscountry |
| 21/2-ton truck. | 12 | 47 | 30 | 564 | 360 |
| 1-ton trailer........................................ | 12 | 19 | 19 | 228 | 228 |
| Total number of rounds normally carried in battery. |  |  |  | 780 | 600 |

| Maximum resupply loads | $4 \text {-ton }$ trucks | $\begin{gathered} 21 / 2-\text { ton } \\ \text { trucks } \end{gathered}$ | $\begin{gathered} 1-\text { ton } \\ \text { trailers } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| On good roads | 75 | 47 | 19 |
|  | 40 | 30 | 19 |

## f. Battery 75-mm Gun, Antitank, Truck-Drawn:

(average packed weight of aill types, per round, 23 pounds)
MAXIMUM LOADS ADDITIONAL TO PERSONNEL AND EQUIPMENT

| Type vehicle and normal assignment | $\begin{gathered} \text { Number } \\ \text { in } \\ \text { battery } \end{gathered}$ | Rounds carried on each vehicle | Total rounds carried |
| :---: | :---: | :---: | :---: |
| $21 / 2$-ton truck, prime-mover. | 8 | 90 | 720 |
|  | 2 | 129 | 258 |
| 1-ton trailer, ammunition............................................................. | 2 | 87 | 174 |
| Total number of rounds normally carried in battery............ |  |  | 1,152 |
|  |  |  |  |

## - 113. Prescribed Load:

## NOTES

(1) This item is not prescribed by tables of basic allowances.
(2) Carried by 18 trucks ( $21 / 2$-ton) and 16 trailers ( 1 -ton) provided in gasoline supply platoon in addition to general cargo vehicles. Not included in total tonnage.

## SECTION III

## INFANTRY DIVISION (TRIANGULAR)

- 114. Methods of Supply.-The methods of supply prescribed for the infantry division (square) in paragraph 102 are applicable to the supply of the triangular division.
- 115. Procurement of Class II and IV Supplies.-Class II and Class IV supplies are obtained in the triangular division by the same methods described in paragraph 106 of the square division.
E 116. Shipping and Maintenance Requirements-Triangular Division

*Ship tons $=40 \mathrm{cu} . \mathrm{ft}$.

(1) Supporting tables same as subparagraph $b$ to $f$ of paragraph 112, Square Division.

■ 118. Prescribed Load (T/BA No. 7, 19 Nov. '40 \& T/BA No. 10, Nov. '40)

## Quartermaster Battalion Infantry Division (Triangular)

Trucks, $21 / 2$-ton Trailers, 1 -ton
a. Cargo Capacity (160 tons)
$48 \quad 40$
b. Items of prescribed load.-
(1) Rations (48 ton) (1)

14
13
(2) Gasoline ( 4000 gals )
$5 \quad 5$
(3) Water (4000 gals)
$5 \quad 5$
(4) Small Arms Ammunition (64.5 ton) (2)

19
17
c. Total prescribed load (147 tons)

43
40
d. Vehicles without prescribed load 50
e. Total vehicles (Sum of $c$ and $d$ )

48
40

## NOTES

(1) This item is not prescribed by tables of basic allowances.
(2) Tables of basic allowances prescribes a load of 111 tons of small arms ammunition. Only 64.5 tons are carried here in order to carry one days supply of rations for instructional purposes.

## Section IV

## INFANTRY DIVISION TRIANGULAR (MOTORIZED)

119. The methods of supply in an infantry division (triangular, motorized) are the same as the methods of supply in the division (square) or division (triangular).

## Section V

## ARMORED DIVISION

- 121. Methods of SUPPLy.-An armored division may be supplied by any of the following methods:
a. When the division is located within a reasonable operating radius of army supply points, supply is obtained therefrom by regimental and separate unit transportation.
b. When the division is not located within a reasonable operating radius of the normally established army supply system, arrangements are made with higher authority to establish temporary railheads, truckheads, or dumps near the division area from which regimental and separate unit transportation can obtain required supplies.
c. Supply in special operations, the duration of which will be several days, may be effected by attachment of sufficient cargo transportation to carry the supplies necessary to make the division self contained for that period of time.
d. Supply may be effected by air transport to landing fields in possession of or protected by the division.
$e$. Supplies may be dropped by parachute from air transports in a marked area near the division.
$f$. In prolonged operation over wide areas supply may be effected directly to the unit by relays of army motor convoys moving between supply bases and holding and reconsignment points established near the localities in which the units are operating. Each convoy of army motor vehicles operating as a unit carries a type load of approximately one refill for the armored force or major subdivision of the force. Unit convoys are dispatched from the control point to destinations as required.

## GASOLINE REQUIREMENTS, ARMORED DIVISION (B) FOR COMPANY OR LARGER UNIT

* Tank capacities of 1941 models.
(1) Includes Trks: $1 / 2$-ton, pick-up; $1 / 2$-ton, Rad; $1 / 2$-ton, w/carrier; $11 / 2$-ton, panel delivery; and emergency repair.
(2) Includes Sp Engr vehicles.
(3) The assembled C and Ki Trks of Cos (Btrys) normally march with the Sup (T) element of Serv ( Hq ) Cos (Btrys).
(1) Includes Co (Btry) C Trks, Atchd Med vehicles, and other Sp equipped Trks as shown on T/O's.
(5) Less C and Ki Trks. (See note (3).
(6) Less Ki Trk. (See note (3.)
(7) Less band Trks. (See note (1).)
(8) Includes one Trk, $1 / 4$-ton, Ln, and seven Mtcls.
(0) Trks for second days' Sup of gasoline and/or Am.
(10) Includes one pick-up, nine C Trks, two Ki Trks, and two trieycles.
(11) Less W Sup equipment Trk. (See note (4).)
(10) Less gasoline and oil truck. (See note (1).)
(18) Based on T/O's dated November 15, 1940.
(14). Less 600 gallon gasoline and oil Trks.
(10) Includes Trks, 4-ton, cargo.
(16) Mtcls and tricycles march with $\mathbf{C}$ vehicles unless otherwise noted.
(17) Includes two Armd Regts (L), one Armd Regt (M), and one FA Regt ( $105-\mathrm{mm}$ How).
(18) Includes Atchd Med vehicles.
(19) Oil and grease consumption is eight per cent of gasoline consumption.
(20) Includes Trks, 4-ton, Trac.
(22) Includes Trks, crane.
(22) Gasoline tank capacity in gallons.
(23) Includes Sp Ord vehicles.
(24) If replaced by tricycles, gasoline consumption will be changed accordingly.
(2) Addition of 246 gallons for one day's supply of Sp Engr equipment.
(22) T/BA provides one truck, $21 / 2$-ton, office, not shown on this table.
- 124. Data Required in Resupply of Armored Units.

## NOTES

a Suggested form to be used by unit commanders as a basis for the consolidated report.
$b$ Similar form can be used for other organic vehicles.
c. Prescribed load should be entered by the unit commander for each type of veticle in his unit.

- 125. Consolidated Reports on Status of Supply.-Periodic vehicle reports are consolidated by the unit commanders. The consolidated reports show the totals of Class III and Class V supplies on hand and the amount of each required to complete the load of the vehicles of the unit.

The final consolidation of expenditure reports shows the total amount of supplies on hand and the total amount required to reestablish the prescribed loads of the force.

- 126. Prescribed Load
(T/BA No. 17, 29 Nov. ' 40 \& T/BA No. 10, 1 Nov. '40)

## Section Vi <br> CAVALRY DIVISION (HORSE)

- 134. Methods of Supply.-The methods of supply used by the cavalry division are based upon the characteristics and missions of cavalry which require the division to operate over broad fronts at a considerable distance from a railhead, and which require great mobility. The following methods or combinations of methods are used:
a. When army supply points are within normal operating radius of regimental trains.-By drawing supplies from army supply points using regimental and separate unit transportation, see paragraph 102.
b. When army supply points are beyond normal operating radius of regimental trains.-Three methods are available in this case. They are:
(1) Supply of regiments and separate units by the division services employing transportation under division control. This method (unit distribution) is similar to that described in $a$, except as to the transportation used and should be used only when army supply points are sufficiently close to permit it. An alternate method is to use the division transportation to establish truck heads for the service of the regiments and separate units.
(2) Establishment of advanced supply points (all classes of supply) by army, then supply by either of the methods described in (1) above.
(3) Attachment by the army of sufficient cargo transportation to insure supply in special operations, the duration of which will be several days, in order to make the division self sustaining for that period of time.
c. Special Methods.-In special cases supply may be effected by air transport, either from landing fields in possession of the unit, or by dropping in a marked area.
- 135. Basic Doctrine.-Any method of effecting supply of the cavalry division should recognize the following basic doctrine.
a. Supplies must be placed within reach of unit trains.
$b$. Supplies must be kept mobile.
c. The transportation available to separate regiments and units of the cavalry division will provide one day's supply only. All units must be supplied daily.
d. Supply, especially of Class III and V, must be adequate.
$e$. The method of supply adopted must be flexible to meet unexpected situations.

## Section VII

## ARMY CORPS

- 141. Methods of Supply.-The divsions of a corps are supplied direct from army supply points as described in Section II of this chapter. Corps troops are supplied by the same methods as those prescribed for the supply of a division. The corps commander and his staff perform the same functions in the supply of corps troops that a division commander and his staff perform in the supply of a division.
- 142. Trains of the Corps.-The trains of the corps carry no reserve supplies for its divisions and have no prescribed load therefor. The corps commander prescribes loads for his trains by item and amount as required.
- 143. Prescribed Ammunition Loads, Organic Corps Artillery BriGADE.

(2) Threc gun batteries of four 3-inch AA guns cach. Each battery is also provided with four caliber . 50 AA machine guns for its own protection. (3) Three $37-\mathrm{mm}$ AA gun batteries of eight guns (four platoons) each and one MG battery of twelve caliber .50 AA machine guns (three platoons).
(4) Unit of fire per piece: 3 -inch AA gun, 300 rounds; 37 -mm AA gun, 1,800 rounds; caliber .50 AA machine gun, per machine gun in gun batteries: (5) All ammunition-carrying trucks (except prime movers and machine-gun battery vehicles) are $21 / 2$-ton.
(6) Pending publication of Tables of Organization and Tables of Allowances for $90-\mathrm{mm}$ AA guns, prescribed loads for these guns may be taken tentatively (7) Four $37-\mathrm{mm}$ gun batteries of 8 guns ( 4 platoons) each.

- 145. Corps Quartermaster Service.
a. Cargo transportation.

2 Cos Truck-21/2-ton trucks \& 1-ton trailers.
Trucks per company available for cargo-48
Trailers per company available for cargo-40
Total trucks $=96$
Total trailers $=80$
Total truck tonnage $=\mathbf{2 4 0}$
Total trailer tonnage $=80$

Total combined tonnage 320
b. Labor.

1 Service Company (Administrative personnel excluded)

| Unit | Number of men | Capacity in <br> tons per 24 hours |
| :--- | :---: | :---: |
| Squad | 10 | 50 |
| Section | 40 | 200 |
| Platoon | 80 | 400 |
| Company | 160 | 800 |

c. Gasoline Supply Company.

Capacity-15,700 gallons gasoline - 300 gallons oil.
(All in 5 or 10 gallon containers)
d. Quartermaster Company, light maintenance, has no general cargo transportation.

## Section VIII

## ARMY

- 146. METHODS OF SUPPLY.-Army troops are supplied by the same methods as those prescribed for corps troops. (See Section VII, Chapter 3.)
- 147. Army Trains.-Army trains carry no reserve supplies for lower units. Normal loads are prescribed for army trains by the army commander whenever required.

148. Prescribed Ammunition Loads, Antiaircraft Artillery Brigaade. (1)

| Unit | $\left\|\begin{array}{c} \text { Unit } \\ \text { of } \\ \text { fire } \\ \text { (4) } \end{array}\right\|$ | Number of rounds |  |  | Vehicles used (5) | $\begin{aligned} & \text { Unit } \\ & \text { of } \\ & \text { fire } \\ & \text { © (4) } \end{aligned}$ | Number of rounds |  |  | $V$ ehicles used |

## NOTES

a. Based on T/O published 1 Nov., 1940.
b. The load of ammunition vehicles will be prescribed to meet the antieipated action.

SUPPLY

- 152. Gasoline Requirements-GHQ Reserve Tank Group Units

(1) Includes $1 / 2$-ton, pick-up, and emergency repair trucks.
(3) The assembled C and Ki trucks of companies normally march with the Transportation Platoon of Headquarters Company.
(1) Includes company $\mathbf{C}$ trucks and attached medical vehicles.
(6) Trucks for second day's supply of gasoline and/or ammunition.
(7) Based on T/O's dated November 15, 1940.
(8) Motorcycles and trucks, $1 / 4$-ton liaison, march with $\mathbf{C}$ vehicles unless otherwise noted.
( Includes special ordnance vehicles.
In
(1) replaced by tricyclese, gasoline consumption will be changed accordingly.
(1)
Based on tank capacity of 1941 model vehicles.

[^7]- 153. For shipping and Maintenance Requirements of GHQ tank units see Section V, Armored Division.

## Section X

## AIR FORCE UNITS

(Data to be issued later)

## Chapter 4 <br> EVACUATION, REPLACEMENTS, AND PRISONERS OF WAR

Section I Evacuation paragrapes<br>II. Replacements.<br>154-162<br>163-168<br>III. Prisoners of war.<br>169-170

## Section I

## EVACUATION

## - 154. Casualty Estimates-General.-a. Classification.-All casualties

 are classified as follows:(1) By nature of disability, into the sick, the gassed, the wounded, and the dead. The sick are further classified as communicable or noncommunicable.
(2) By severity of disability, into walking and litter patients.
(3) By suitability for evacuation, into transportable and nontransportable.
(4) By type of accommodations required for evacuation, into recumbent and sitting.
b. Sick casualties.-(1) Casualties from sickness and nonbattle injuries among front-line troops of a seasoned command in campaign, except in a particularly unhealthful region, cause an average daily increment of sick of about six-tenths of one per cent $(0.6 \%)$. This average rate may be expected at certain seasons of the year, without epidemics, to reach one and five-tenths per cent ( $1.5 \%$ ) or even more. Of these, two-thirds may remain under treatment in their own organization (at aid stations) or in division clearing stations if there be no interference with the primary mission of reception, treatment, and evacuation of battle casualties. In any event, the other one-third will be evacuated from the division area, half of them recumbent and half of them sitting.
(2) The daily admission rate to the hospitals for an entire field force, made up of seasoned troops and serving in a temperate climate, for sick and nonbattle injuries will be approximately .165 per cent. After some months, this will cause a constant noneffective rate of about 4.5 per cent. However, for unseasoned troops, in the same climatic conditions, the noneffective rate will reach 6 per cent, and even higher under unfavorable conditions of climate and location.
(3) Of the sick admitted to hospitals in the theater of operations about 1.5 per cent die, 3 per cent will be invalided home, and 95.5 per cent will be returned to duty eventually. The average stay in the hospital is 27 days.
c. Battle casualties.-(1) The following table has been developed from American experience in active operations of the World War:

BATTLLE CASUALTIES,
INCLUDING KILLED, IN PER CENT OF THE UNIT STRENGTH

| 1 | 2 | 3 | 4 |
| :---: | :---: | :---: | :---: |
| Unit | Average for all days in line | Severe battle day | Maximum battle day |
| Infantry regiment.. | 2.5 per cent | 12-15 per cent | 35 per cent |
| Division....-.-............ | 1.0 per cent | 6-8 per cent | 12 per cent |
|  | 0.5 per cent | 2-3 per cent | 5 per cent |
| Army -...........---3----- | 0.35 per cent (1) | 0.7-1.5 per cent | 2 per cent |

(1) As this is for sustained active operations, the average for one or several armies over a long period of time would be less, and may be taken as 0.2 per cent.
(2) In estimating battle casualties in an army, an estimate based on frontline divisions engaged will usually be more accurate than if based on a rate for corps or the army as a whole.
(3) The battle casualties of an entire expeditionary force or theater of operations can best be estimated by using the rates incurred in the component divisions or armies, as the relative proportion of front-line troops to the total force will vary widely in each situation.
(4) The following data relative to battle casualties are approximately accurate for a severe engagement and can be used as the basis for calculations:
(a) In temperate and tropical zones, the ratio of killed to wounded is as follows:

> Open operations about 1:5
> Trench operations about 1:4

Hence, it may be expected that from $162 / 3$ per cent to 20 per cent of all battle casualties will be classed as killed. In the arctic zone, the ratio of killed to wounded will be considerably higher due to death of the wounded from exposure to cold.
(b) The transportation requirements for battle casualties of a division are as follows:
Per cent
Dead.........................................................................................- 20
Able to walk to the collecting station but
requiring transportation (sitting) farther to the rear... 40
Require transportation (recumbent)................................ 40
Of all casualties, about 1 per cent are nontrans-
portable beyond the surgical hospital, except by air....

Total...... 100
(c) Of gunshot wounded about-

### 8.12 per cent die in hospital.

12 per cent recover in 15 days.
12.86 per cent recover in 15 to 30 days.
21.29 per cent recover in 30 to 60 days.
9.56 per cent recover in 60 to 90 days.
16.17 per cent recover after 90 days.

20 per cent are of no further military value.
The average stay in hospital for all gunshot wounded is about 90 days.
(d) Of gas casualties -
1.73 per cent die in hospital.

25 per cent recover in 15 days.
26.81 per cent recover in from 15 to 30 days.
24.44 per cent recover in from 30 to 60 days.
16.02 per cent recover after 60 days.

6 per cent are of no further military value.

- 155. Formula for Computing Number of Beds Required.-The number of beds (in fixed hospitals) required in the theater of operation after several months accumulation equals strength $\times$ daily admission rate $\times$ average days in hospital.

Example (when all cases that will eventually be returned to duty are retained in the theater):

Strength of force: $2,000,000$.
Strength of troops in combat zone: $1,000,000$.
Daily admission rate for sick and injured: 0.165 per cent.
Daily admission rate for wounded on basis of troops in combat zone: 0.2 per cent.

Average days in hospital for sickness and nonbattle injuries: 27. Average days in hospital for wounded: 90.

## Solution:

Beds required in the theater of operation after several months:
For nonbattle casualties, $2,000,000 \times 0.00165 \times 27 \ldots \ldots \ldots \ldots \ldots . . . . . . . . . . . . . . . . . . . . . .89,100$
For battle casualties of troops in combat zone, $1,000,000 \times 0.002 \times 90$ 180,000

Total beds required........................269,100
Per cent of the total force.................. 13.45
156. Maximum Capacity of Means of Transportation for Casualties:

| 1 | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: |
| Venicle | Men |  |  | Animals |
|  | Sitting | Recumbent | Average |  |
| Ambulance, air | $\begin{array}{r} 16 \\ 8 \\ 10 \\ 6 \\ 10 \\ 16 \\ 88 \\ 48 \\ 64 \\ 700 \end{array}$ | $\begin{array}{r} 10 \\ 4 \\ 4 \\ 4 \\ 4 \\ 6 \end{array}$ | $\begin{array}{r} 13 \\ 6 \\ 6 \\ 5 \\ 5 \\ 7 \end{array}$ | - |
| Ambulance, animal-drawn. |  |  |  | - |
| Ambulance, motor, held Ambulance, cross-country.... |  |  |  | - |
| Truck, $11 / 2$-ton.. |  |  |  | --...... |
| Truck, $21 / 2$-ton |  |  |  | $\cdots$ |
| Railway car, coach.... |  | $\begin{array}{r} 24 \\ 32 \\ 300 \end{array}$ | $\begin{array}{r} 36 \\ 48 \\ 500 \end{array}$ |  |
| Pullman car - 12 section |  |  |  | , |
| Hospital train |  |  |  |  |
| Ambulance, veterinary- |  |  |  | 26181820 |
| Trailer, 2-horse van. |  |  |  |  |
| Truck, $21 / 2$-ton, stock rack body.............................. |  | - |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |

- 157. Time Element of Evacuation:
a. Personnel:

For round trip evacuation (including loading and unloading):
Litter squads: 1,000 yards each way in one hour
Wheeled litters: 1,250 yards each way in one hour
Ambulance, animal-drawn: 2 miles in one hour
Ambulance, motor, during combat in division area: 5 miles each way in one hour.
b. Animals:

For round trip evacuation (including tying and untying):
Lead line: 2,000 yards each way in one hour.
c. To calculate the time required for evacuation of casualties from the field, or the number of ambulances required to evacuate casualties in a given time, use the following formulae:
$\mathrm{W}=$ number of casualties
$t=$ time required for round trip
$\mathrm{M}=$ number of vehicles or itters
$\mathrm{N}=$ number of patients per load
$\mathrm{T}=$ time required or allowed

$$
T=\frac{W \times t}{M \times N} \quad M=\frac{W \times t}{T \times N}
$$

## SEction II

## REPLACEMENTS

- 163. General.-Replacements are classified as loss and filler. Filler replacements are those required to bring units initially to authorized strength, i.e., to fill a vacancy not previously occupied. A loss replacement is a replacement to fill a vacancy which has been occupied and thereafter vacated. Plans for the number of replacements required, both loss and filler, is a function of the zone of the interior. The commander of a theater of operations makes representations when necessary as to replacement needs of the theater.
a. Replacements like supplies are echeloned in depth. The replacement system is snown diagrammatically in paragraph 168.
b. Daily loss rates are shown in paragraph 164 . The cumulative loss for any period may be determined by selecting one of the listed daily loss rates or any other daily loss rate determined to be correct and applying the selected rate in accordance with footnotes to the table in paragraph 165 and the example in paragraph 166. The expected accumulated losses in manpower, thus determined, may be used by the theater commander as a basis of requisitions on the zone of the interior for loss replacements.
- 164. Rates of LOSSES. - a. Daily loss rate per 1,000, theater of operations (except Air Corps). -
(1) Disease and nonbattle injurles:
(a) Temperate and arctic zones, favorable conditions.... 1.92
(b) Temperate and arctic zones, unfavorable conditions..2.49
(c) Tropical zone, favorable conditions................................ 2.11
(d) Tropical zone, unfavorable conditions.........................2.69
(2) Gas injuries:
(a) Major warfare-----............................................................-. . 24
(b) Minor warfare.................................................................................. 00
(3) Gunshot injuries:
(a) Major warfare.-................................................................. . 53
(b) Minor warfare.-................................................................... . 31
(4) Captured and missing:
(a) Major warfare.-................................................................. . 08
(b) Minor warfare.................................................................... . 03
b. Daily loss rate per 1,000 Air Corps, theater of operations: Disease and nonbattle; gas, and gunshot injuries same as for ground forces.
c. Flying losses, theater of operations: $1 \%$ per day of the combat crews in the theater.
d. Daily loss rate per 1,000 , zone of the interior:
(1) Disease and nonbattle injuries........................................-......... 15
(2) Flying losses, pilots and crews, Air Corps .33

## NOTES

The casualty rates stated above are only a general guide and where possible the casualty rates should be determined for each specific theater of operations.

Troops in the theater of operations are considered seasoned troops, while those in the zone of the interior are both seasoned and unseasoned.
E 165. FACTORS FOR USE IN CALCULAtING LOSSES (less Air Corps training wastage and flying losses) (1).-a. When the duration of hospital treatment in theater of operations is 120 days, $2.63 \%$ of disease and nonbattle, $5.4 \%$ of gas, and $27.4 \%$ of gunshot admissions to hospital are returned to the zone of the interior from the theater of operations: accumulated losses in manpower, using a casualty rate of 1 PER 1000 Per day
 theater of operations

[^10]- 166. An Example of Computation of Losses.-The number of replacements required to replace losses for 30 days for a force consisting of 500,000 (including 10,000 Air Corps with 1,500 in combat crews) initially operating in a major theater of operations in the temperate zone, favorable conditions (duration of hospital treatment in the theater of operations is 120 days):
a. Losses except Air Corps:
(1) Disease and nonbattle injuries: $1.92 \times 17.40 \times 490 \ldots \ldots .-16,370$
(2) Gas injuries: $.24 \times 23.49 \times 490$ _-_-............................... 2,763
(3) Gunshot injuries: . $53 \times 36.71 \times 490 \ldots \ldots . . . . . . . . . . . . . . . . . . . . . . . . . . ~ 9,534 ~$

b. Losses, Air Corps:
(1) Disease and nonbattle injuries: $1.92 \times 17.40 \times 10 \ldots \ldots . .-\quad 335$
(2) Gas injuries: . $24 \times 23.49 \times 10 \ldots \ldots . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . ~ 57 ~$
(3) Gunshot injuries: . $53 \times 36.71 \times 10$................................ 195

Total.......... 1,037

## NOTES

The total monthly loss $(30,880)$ is about $6.2 \%$ of the total force. In order that sufficient replacements will be available in the theater of operations at all times, an initial pool of at least $20 \%$ of the strength of the force should be provided for.

In computing replacements for combat crews, Air Corps, for any month, consideration must be given to the number of aircraft available to replace those destroyed.

## - 167. Distribution of Battle Losses-Theater of Operations (except Air Corps):

Arm or Service Per cent

Field Artillery....................-.................................................... 4.90

Coast Artillery Corps............................................................... . 34
Quartermaster Corps....................-.-.............................................-.-.-. . 08

Ordnance Department............................................................. . 00
Total.......... 100.00

## NOTES

The distribution set forth above is based on AEF experience. The percentages must be modified in accordance with the strength and composition of our own and the enemy's forces; nature and location of the theater of operations; nature of the warfare, open or stabilized; degree of training; and morale.

Distribution of losses (other than battle) are in direct proportion to percentage strength of each branch.

Five per cent of the loss replacements are officers.

## Section III

## PRISONERS OF WAR

- 169. Estimate of Prisoners of War. - In order that the necessary arrangements may be made for the care, reception and disposition of prisoners of war, it will be necessary to estimate the number of prisoners that will probably be captured over a period of time. Knowing the approximate strength of the enemy's forces and the daily loss rates for gunshot injuries and gas injuries, the approximate number of prisoners of war can be estimated. For an enemy force in a major war, if the average daily loss rate per 1,000 is estimated to be .53 for gunshot and .24 for gas injuries, the average daily rate for captured and missing will be $10 \%$ of the gunshot and gas injuries or approximately .08 per 1,000 . Hence for an enemy force of $1,000,000$, the average daily number of prisoners captured will be 80. As prisoners are not received at a uniform rate, special preparations must be made for the reception of unusual numbers when important engagements are anticipated. As a factor of safety, facilities for three or four times the estimated numbers per month should be available.
- 170. Diagram of Evacuation of Prisoners of War.

## Chapter 5

## MILITARY MAPS

- 171. Responsibility for Maps and Mapping:

| Individual or agency | Duties |
| :---: | :---: |
| Commander of unit | Advance planning, which is necessary if mapping situation is to keep ahead of the tactical situation. Good maps will seldom be on hand without special command .effort. |
| G-2 in divisions and larger units | Preparation of plans and policies and supervision of all activities concerning military topographic surveys and maps, including their acquisition, reproduction, and distribution. |
| Corps of Engineers | Prosecution of surveys, photogrammetric processes or compilations for the production or revision of maps required for military purposes. <br> Map reproduction, supply, and distribution. |
| Air Corps | Aerial photographic work for: <br> Military mapping operations in accordance with specifications prepared by Corps of Engineers, and <br> Photography to meet intelligence needs of combat troops. |

- 172. Classification of Maps.-a. General:
(1) Standard-ordinarily made in time of peace as an element of preparedness or for the economic development of the country.
(2) Special-especially made for military use.
b. According to scale:
(1) Small scale-1:1,000,000 to 1:7,000,000.
(2) Intermediate scale- $1: 200,000$ to $1: 500,000$.
(3) Medium scale-1:50,000 to 1:125,000.
(4) Large scale-normally not greater than 1:20,000.
c. According to use:
(1) General (geographic) - maps of small scale, covering the States and United States, for general planning and strategical studies.
(2) Strategic-maps of intermediate scale, covering extensive areas, for strategical and logistical studies.
(3) Tactical-maps of medium scale, covering extensive areas, for tactical and logistical studies.
(4) Battle-maps, prepared normally by photogrammetric means and at a scale of $1: 20,000$, covering limited areas, for tactical and technical uses.
(5) Aeronautical charts-maps of small and intermediate scale, covering extensive areas and with air facilities data denoted thereon, primarily for aerial navigation.
(6) Map substitutes-sketches, provisional maps, and various types of aerial photographs and mosaics of various scales, covering such areas as may be required, for detailed studies or temporary use.
d. According to methods of reproduction:
(1) Lithograph-reproduced by lithography in one or more colors.
(2) Fluid duplicator-reproduced by dye printing process in one or more colors.
(3) Contact prints—reproduced by photographic methods. Includes black and white, blue, and brown prints.
(4) Mimeograph-reproduced by mimeograph or similar means in one color.
(5) Hectograph-reproduced by hectograph or similar means in one or more colors.

173. Types of Maps and Photomaps for Theater of Operations:

| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Kind of map | Scale | Contour interval (feet) | Sheet size (inches) | Size of area | Purpose | Natural features and works of man shown | Originals and limited number of copies prepared by - | Reproduced in quantity | Probable time or conditions when available (2) |
| Vertical aerial photographs | $\begin{array}{\|c\|} 1: 5,000 \text { to } \\ 1: 40,000 \\ \text { (12 inches } \\ =1 \text { mile to } \\ 11 / 2 \text { inches } \\ =1 \text { mile) } \end{array}$ |  | Varies | Varies, depending on scale | Target location. Detailed reconnaissance. Intelligence. Minor tactics. Mosaics, preparation of stereo-pairs and triplets | Varies | Air Corps, Civilian agencies | Army topographic battalions, Corps topographic companies | Limited numbers: 3 to 5 hours after photography. Quantities: 48 hours after photography |
| Oblique aerial photographs | Varies |  | Varies | Varies depending on scale | Target location. Detailed reconnaissance. Intelligence. Minor tactics. | Varies | Air Corps, Civilian agencies | Army topographic battalions, Corps topographic companies | Limited numbers: 3 to 5 hours after photography. Quantities: 48 hours after photography (3) |
| Battle map, uncontoured | $\begin{aligned} & 1: 20,000 \\ & \quad(3 \text { inches } \\ & =1 \text { mile }) \end{aligned}$ |  | 22 by 28 | $\begin{gathered} 10,000 \text { to } \\ 15,000 \\ \text { yards } \\ \text { square } \end{gathered}$ | General field uses. Horizontal control for unobserved fires by artillery | Stream lines and vegetation Railroads, roads, towns, air fields, etc. | GHQ and army topographic battalions | GHQ and army topographic battalions | For limited areas: 7 days or more after photography |
| Battle map, contoured | $\begin{aligned} & 1: 20,000 \\ & \quad(3 \text { inches } \\ & =1 \text { mile) } \end{aligned}$ | 20 | 22 by 28 | $\begin{gathered} 10,000 \text { to } \\ 15,000 \\ \text { yards } \\ \text { square } \end{gathered}$ | Used by all arms. Horizontal and vertical control for unobserved fires by artillery. Suitable for tactical and technical uses | Stream lines, vegetation, and ground forms Railroads, roads, towns, air fields, etc. | GHQ and army topographic battalions | GHQ and army topographic battalions | For limited areas: 2 weeks or more after photography |

Reproductions: 24 to 48 hours |

NOTES
(1) The data as to existing maps contained in this table concern primarily (8) Under most favorable conditions, a single wet-print can be dropped within 30 minutes after photography, when the rapid type of photog-
(4) 5,000-yard grid lines overprinted, or shown by tick marks at edge of map.
174. Engineer Mapping Troops:

| 1 | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: |
| Unit | Maps reproduced | Methods of reproduction | Sheet size (inches) | Remarls |
| Engineer battalion, topographic, GHQ | Maps in large quantities <br> Maps of permanent utility <br> Special sketches and drawings <br> Various types of provisional and photomaps | Lithography in 1 or more colors | $\begin{aligned} & 24 \text { by } 34 \\ & \text { (impres- } \\ & \text { sion } \\ & 22 \text { by } 28 \text { ) } \end{aligned}$ | Battalion is prepared to take over and operate presses of larger sizes. |
|  |  | Contact prints (black and white, blue, and brown) |  |  |
|  |  | Duplicator (hectograph and similar means) |  |  |
| Engineer battalion, topographic, army | Battle maps of unmapped areas for tactical and fire-control use Sketches and drawings | Lithography in 1 or more colors | $\begin{aligned} & 24 \text { by } 34 \\ & \text { (impres- } \\ & \text { sion) } \\ & 22 \text { by } 28 \text { ) } \end{aligned}$ | Battalion organized for quantity reproduction to meet the more local reproduction needs of the army. <br> Battalion equipped to provide maps to a depth of about 30 miles into hostile terrain. First sheets should appear about 2 weeks after receipt of aerial photographs; subsequent sheets should be published at a rate of about 100 square miles per day. |
|  |  | Contact prints (black and white, blue, and brown) |  |  |
|  |  | Duplicator (hectograph and similar means) |  |  |
| Engineer company, topographic, corps | Provisional and photomaps <br> Mosaics <br> Maps of limited areas Overprints, overlays, and sketches | Lithography in 1 color | Impression 17 by 19 | Multicolor reproduction possible in cases where exactness in matching color plates is not essential and time is available. |
|  |  | Contact prints (very limited numbers only) |  |  |
|  |  | Duplicator (hectograph and similar means) |  |  |
| Division engineers | Simple sketches, overprints, and overlays | Duplicator (hectograph and similar means) | 14 by 18 | Lithographic reproduction not possible in time of war except in certain square (infantry) and other divisions. |

- 175. Air Corps Photographic Troops.-a. General:

| 1 | 2 | 8 |
| :---: | :---: | :---: |
| Unit | Photographs furnished | Remarks |
| Reconnaissance aviation with GHQ | Various types incident to its reconnaissance missions (large scale vertical and oblique photographs) |  |
| Army reconnaissance aviation | Specialized photography needed by topographic battalions for photogrammetry (multiple-lens or wide-angle single-lens type) <br> Large-scale vertical and oblique photographs and mosaics for intelligence purposes | Such photography ordinarily not suitable for intelligence purposes because of small scale and lack of detail. May contain important information, however, and prints should be made available to military intelligence officers for study. |
| Corps aviation | Wide-coverage small-scale photographs required by corps topographic company for preparation of map substitutes Large-scale photographs needed for intelligence or combat purposes (single photographs, vertical and oblique, stereo-pairs and triplets, night photographs, and rapid production photographs) | Can produce but limited quantities of contact prints and can lay small mosaics of less than ten prints. <br> Laying of mosaics of a large number of prints or quantity reproduction of mosaics is the respoasibility of engineer troops. |

b. Capabilities of aviation units.-The GHQ reconnaissance squadrons and army and corps observation squadrons are provided with trailer laboratory facilities. Working at maximum speed under favorable conditions, a trained photographic section is capable of the following photographic production:

| Photographs | Time required to produce (hours) |  | Remarks |
| :---: | :---: | :---: | :---: |
|  | $\begin{gathered} \text { From } \\ \text { trailer } \\ \text { laboratory } \end{gathered}$ | From trailer laboratory and other facilities |  |
| Negatives: |  |  |  |
| 15 (5 prints eacb). | 2 | 11/2 | Prints partially dried; titled but not interpreted |
| 50 (5 prints each) | 4 | 3 | Prints partially dried; titled but not interpreted |
| Prints: 100 prints each)......... | 5 | 4 | Prints partially dried; titled but not interpreted |
| 1,500-2,000 | 24 |  | Prints partially dried; titled but not interpreted |
| 3,000-5,000.................- |  | 24 | Prints partially dried; titled but not interpreted |

176. Map Distribution in the Field:

| 1 | 2 | 3 |
| :---: | :---: | :---: |
| Organization or unit | Agency responsible for securing and issuing maps (3) | Agency from which maps are secured |
| GHQ and GHQ troops | Engineer-GHQ (3) | War Department, GHQ topographic battalion (2), and base plants |
| Army | Army engineer (2) | Army topograpic battalion (2), and engineer-GHQ (3) |
| Corps | Corps engineer (2) | Corps topographic company (2), and army engineer (2) |
| Division | Division engineer (2) | Corps engineer (2) |
| Regiment | Regimental S-2 | Division engineer (2) |
| Battalion (1) | Battalion S-2 | Regimental S-2 |
| Company (1) | Company commander | Battalion S-2 |

## NOTES

(1) Applies similarly to squadrons, troops, or batteries.
(2) These agencies only are authorized to maintain stocks of maps. Maps are issued to G-2 for headquarters distribution.
(3) The distribution of confidential or secret maps will be governed by the provisions of AR 330-5.

- 177. Initial Allowance of Maps.-a. Map allowances are based on the principle that each individual or organization should have an adequate supply of maps of areas in which they are currently operating, or in which they have an immediate prospective interest. Units should not be burdened with maps of areas outside their zone of operations, but should have adequate maps of regions of their present operations and of their immediate future oparations. Difficulties of production and distribution, as well as the considerable weights involved, necessitate economy in map issues. Sectors assigned and operations contemplated are the basis for map distribution. The allowances prescribed herein are sufficient for minimum needs only; intervening organizations not specifically authorized to stock maps will not retain copies, but will distribute those received with the object in view of furnishing front-line units with maps needed by them for operations. Proper economy dictates that the only large-scale maps furnished shall be those of the areas of immediate importance to the individual or unit. The initial allowance of military maps will normally be as follows:

|  | Small scale: Normally $1: 1,000,000$ to $1: 7,000,000$ | Interme- diate scale: Normally 1:200,000 to 1:500,000 (1) | Medium scale: Normally 1:50,000 to 1:125,000 | Large | Aeronautical Charts |
| :---: | :---: | :---: | :---: | :---: | :---: |
| (1) Headequatmes: |  |  |  |  |  |
| GHQ | 100 | 100 | 50 | 10 | 50 |
| Army.... | 25 | 75 | 50 | 10 | 25 |
| Corps.... | 15 | 40 | 75 | 10 | 25 |

|  |  |  |  |  |  |
|  |  |  |  | -.......... | 10 |
|  |  |  |  |  | 4 |
|  |  |  | 1 | 1 (5) | 4 |

NOTES
(1) Allowance for separate battalions, Cavalry, Armored Force, and Motorized Infantry will be increased 50 percent.
(2) For Cavalry, Armored Force, Motorized Infantry, and attached troops only.
(3) Except for officers of ArmylAir Forces. (Allowances for artillery observation missions prescribed in note (b) below.)
(c) Except Army Air Forces. see note (5) below. (Use by Cavalry and Armored Force will be exceptional.)
(B) Observation squadrons only. Airplanes observing artillery fire will be issued same scale maps used by artillery firing batteries.
b. (1) If maps of any of the scale groupings in $a$ above are not available, substitution is authorized of maps of the scale nearest to that desired, and in quantities provided above for the map replaced.
(2) Special maps and road maps will be issued as directed by the commanding officer.

## 178. Miscellaneous.-a. Grid coordinates:

(1) Size of military grid.-The military grid is formed by lines spaced 1,000 yards apart on maps of 1:20,000 scale, and 5,000 yards apart on maps of 1:62,500 scale.
(2) Atlas grid.-(a) The military grid is not applicable to map substitutes due to inherent distortions, variations in scale, and the resultant difficulty of accurately locating the military grid lines thereon. A suitable atlas grid will therefore be applied to photographs, photomaps, provisional maps, and to maps whose accuracy does not warrant the use of the military grid. In applying the atlas grid to the map, the grid lines will be lettered from left to right and numbered from bottom to top. The purpose of the atlas grid is to facilitate description and identification of points of interest. The grid lines will be equally spaced and
approximately 1.8 inches apart. Starting at the left edge of the sheet, the vertical grid lines will be assigned letters A, B, C, D, etc., and from the bottom of the sheet the horizontal grid lines will be numbered $1,2,3,4$, etc. Important features within the grid squares may be designated by abbreviated title and decimal coordinates, such as RJ-C.5-7.2.
(b) On single verticals used for map substitutes, the grid numbers and letters with ticks only will be applied. On controlled mosaics, the approved military grid system will be applied as accurately as possible.
(3) Expressing grid coordinates.-Regardless of grid spacing, grid coordinates are expressed by stating the reading east along the X (horizontal) coordinate, followed by a dash and the reading along the Y (vertical) coordinate, the whole being enclosed within parentheses. Example: (350.7-754.6)
b. Relation between scale and contour interval of maps:

| Scale | Contour interval (feet) |
| :---: | :---: |
| 1:62,500 | 20 |
| 1:20,000 | --..-..... 20 |
| 1:10,000 | -........ 10 |
| 1:5,000 | -.......... 5 |

- 179. References.-Further details pertaining to military maps and mapping will be found in the following publications:

NOTES
(1) For other than automatic weapons, personal proficiency is a controlling factor. The construction of the weapon, heating, and other conditions influence ustained or prolonged performance.
12 ammunition.
Observed fire,
With a cool gun, a single burst of 100 to 150 rounds can be fired.
Penetrates $5 / 8$-inch armor plate at 500 yards, normal impact.
Semi-automatic fire.
All-over width of vehicle with trails closed: 39.25 inches.
Aimed fire.
Penetrates $11 / 2$-inch armor plate at 1,000 yards, 20 degrees of incidence.
Within limits of maximum range, observation is a controlling factor.
(10) Fragments may fly as far as 400 yards.

## NOTES

These characteristics pertain to the latest type (as of June 1, 1941) vehicles approved for, or already in production. However, since several earlier models of each type vehicle listed are still in use, the data contained in this table must be considered as approximate only.
(2) The cross-country speed of the vehicles listed will vary from 5 to 25 miles per hour, depending on the nature of the terrain, whether employed during day or night, and, if employed at night, whether with or without lights.

| White phosphorus | WP | 1 yellow <br> band WP SMOKE | Like matches | Usually 10 minutes or less (3) | Same as summer | Screening agent (casualty, incendiary) | None | Solid particles burn flesh. Smoke relatively harmless | Grenades, artillery and chemical mortar shells, air bombs |

NOTES
Sternutator.-An agent which causes sneezing, vomiting, irritation of the throat and nose, and temporary physical disability.
Lacrimator.-An agent which, in low concentrations, exerts an intense irritant action on the eyes, causing a profuse flow of tear that vision becomes impossible.
(3) In open.
(5) Vesicant.-An agent that blisters.

## NOTES

(1) One chemical company can install and fire 300 candles.
(1) The maximum effective range of cloud attack from candles is 5,000 yards.
(3) One chemical company can install 300 cylinders in 6 hours at night, if the carry is not over 2 miles.
(1) The maximum effective range of cloud attack from cylinders is 7,500 yards.
(5) WP and FS fillings are not authorized for $155-\mathrm{mm}$ guns. CG fillings are not now authorized.
(6) Time of discharge of tank.

- 188. Chemical Ammunition Requirements.-a. Chemical shell:

| Rounds per circle 200 yards diameter (area target) | 320 | 60 | 60 | 60 | 20 | 16 | 16 | 100 | 180 | 60 |

## NOTES

(1) Minimum depth in line of fire 200 yards (observed fire).
(2) Below 50 degrees F , increase HS $25 \%$, CNS $25 \%$. On wooded targets use $50 \%$ of the quantities given.
(3) Do not fire HS below 32 degrees F. Use Lewisite.
(4) Rounds per hour.
(5) Fired in not over $1 / 2$ minute.
b. Smoke.-(1) Rounds per 100 yards per minute for combined screening and casualty effects:

(2) Rounds per 100 yards per minute for screening effect only:

To obtain the number of rounds required, measure the line to be screened in hundreds of yards. Multiply this length by the quantity shown for the direction of wind given. Multiply this result by the number of minutes the screen is to be maintained plus 1 minute for the establishment of the screen.
c. Airplane munitions.-(1) 30-pound bombs, HS:

Bombs per square ( $100 \times 100$ yards) of area target.............. 15
Bombs per 100 yards of occupied road target.................... 5
Bombs per 100 yards of road for interdiction..................... 10
For bombs used on wooded area targets, reduce the quantity $50 \%$.
For temperatures below 50 degrees F , increase the quantity $25 \%$.
(2) HS tanks for airplanes.-Area covered by one wing tank: 500 yards long by 200 to 300 yards wide.

Note.-Based on average meteorological conditions and following conditions of flight:

Altitude of plane: 100 feet.
Wind velocity (at right angles to line of flight): 3 to 8 miles per hour.
Average ground speed of airplane: 200 miles per hour.
Airplane chemical spray tank, 22 gallons, discharge rate approximately 5 seconds.
Airplane carries 2 wing tanks. Length of area may be doubled by release in turn.
(3) Smoke, FS (or FM), airplane chemical spray tank.-One plane can screen 1,000 yards of front, can blanket an area 1,000x400 yards.
d. Land mines, HS filled.-(Effect is obtained by contamination):

MINES REQUIRED

| Purpose | Mines required |
| :--- | :--- |
| Barriers | Four parallel lines of mines 25 yards apart with mines staggered at 10-yard intervals <br> in each line |
| Large areas | Lines of mines 25 yards apart with mines staggered at 20-yard intervals in each line |
| Along roads | One line of mines on each side of the road with mines staggered at 10-yard intervals <br> along each line |
| Demolitions | Mines placed in lines 5 yards apart at 5-yard intervals along each line |

e. Cloud attacks. - (Require favorable wind.) - (1) Cylinders. - Fire one cylinder per yard of front for the first thousand yards in range and add $1 / 2$ cylinder per yard of front for each additional thousand yards in range. Maximum effective range: 7,500 yards.
(2) Candles.-Use $1 / 5$ candle per yard of front for targets 500 yards away. Add $1 / 5$ candle per yard of front for each additional thousand yards in range. Maximum effective range: 5,000 yards.

- 189. Capabilities of Chemical Units.-a. Mortar operations: (1)

| Agent | Platoon | Company | Batalion |
| :---: | :---: | :---: | :---: |
| Non-persistent gas | Unit too small to use effectively | Covers target area of 7 squares | Covers target area of 28 squares |
|  |  | Gas also effective downwind on additional area at least equal to initial area covered |  |
| $\begin{aligned} & \text { Persistent gas } \\ & \text { (HS) } \\ & \hline \end{aligned}$ | Neutralizes area of 28 squares (2) | Twice the capability of one platoon | Four times the capability of one company |
| $\begin{aligned} & \text { Irritant gas } \\ & \text { (CNS) } \end{aligned}$ | Harasses for 1 hour 54 squares, or for 2 hours, 27 squares, etc. (3) | Twice the capability of one platoon | Four times the capability of one company |
|  | Gas remains effective for about 1 hour after firing ceases. The concentration should be maintained for at least 2 hours. |  |  |
| Smoke (WP) | Screens 800 yards wide for 25 minutes (8) | Twice the capability of one platoon | Four times the capability of one company |

(1) Figures are based on normal loads of ammunition of one type shell.
(2) In woods twice as much area can be neutralized.
(3) Based on adverse winds. With flank winds the capabilities are approximately twice the above.
b. Livens projector operations:

| Agent | Platoon | Company | Battalion |
| :---: | :---: | :---: | :---: |
| Non-persistent gas (CG) | Unit too small to use effectively | With 200 weapons, covers target area of 13 squares; installed in 5 hours at night | With 800 weapons, covers target area of 54 squares; installed in 5 hours at night |
|  |  | Effective downwind on at | ast an equivalent area |
|  | Capabilities of a unit are limited by the number of weapons available and the time for installation. If additional weapons and time are available, above figures can be increased proportionally. |  |  |

## c. Cylinder operations:

| Agent | Platoon | Company | Battalion |
| :---: | :--- | :--- | :--- |
| Non-persistent <br> gas (CG) | Unit too small to use <br> effectively | Unit too small to use <br> effectively | Can install and fire 3,000 <br> eylinders on front of <br> about 3,000 yards. <br> Effective downwind <br> several thousand yards. |
|  | These figures assume that weapons have been delivered near the emplacement. Time <br> for installation depends on hand-carry involved; usually 4 to 5 hours must be allowed <br> for large shoots. |  |  |

## d. Land mine operations:

| 1 | 2 | 3 | 4 | 5 | 6 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Nature of task | Squad task | Platoon task | Company task | Average time (1) |  |
|  | $\begin{aligned} & 1 \text { Truck } \\ & (11 / 2 \text {-ton }) \end{aligned}$ | 6 Squads | 12 Squads | Timafuse or detonating chord | Wired for firing electrically |
| Barrier, 100 yards deep | 500 yards | 3,000 yards | 6,000 yards | 4 hours | 8 hours |
| Road contamination | 1,000 yards | 6,000 yards | 12,000 yards | $\begin{gathered} 5 \text { to } 10 \\ \text { minutes } \\ \text { (2) } \end{gathered}$ | 2 hours |
| Mines required | 200 | 1,200 | 2,400 |  |  |

## NOTES

(1) The time should be increased $50 \%$ for night work.
(2) Mines are dropped from truck moving up to 15 miles per hour

- 190. Penetration of Projectiles.-a. Non-armor piercing bullet, caliber .30 (174 grains):

| 1 | 2 | 3 |
| :---: | :---: | :---: |
| Material | Maximum penetration inches | Thickness in inches to be provided for protection |
| Armor plate. | . 3 | . 5 |
| Concrete (plain). | 2.0 | 3.0 |
| Brick masonry (well cured)......- | 5.0 | 7.0 |
| Gravel...-.-.-............................. | 8.0 | 10.0 |
| Dry sand. | 12.0 | 14.0 |
| Moist sand............................... | 14.5 | 18.0 |
| Solid oak | 20.0 | 24.0 |
| Earth loam............................. | 30.0 | 36.0 |
|  | 60.0 | 72.0 |
| Snow...................................... | (1) | (1) |

NOTE
(1) Varies greatly; 3 feet of packed frozen snow, well consolidated with water, will provide protection, but the penetration will increase as the temperature rises. Soft, unpacked snow affords little protection.
b. Caliber . 30 and caliber . 50 armor-piercing bullet:

c. Antitank weapons:

| 1 | 2 | $s$ | 4 | 5 | 6 |

| $240-\mathrm{mm}$. | 806 | 45 | 14 | 14 |

- 191. Field Artillery Barrage and Concentrations.-Fieid artillery barrages and concentrations.-(Dimensions in yards):

## Chapter 7

## FIELD ENGINEERING DATA

- 192. PURPOSE.-These data are intended for use as general guides only. Their application should be varied to conform to local field conditions as required in each specific tactical situation, based on the recommendation, after reconnaissance, of the unit engineer charged with the task.
- 193. RoADs.-a.Traffic Capacity See par. 48, Chapter 2.
b. Load capacity of civilian roads and bridges.-The design of civilian roads and bridges is based on standard loadings, called H-loadings, in which several vehicles of specified weight follow each other at specified intervals, with, at the same time, loads on the remaining traffic lanes. (Table XXIII, FM 5-35.) This design includes a factor of safety of nearly four to care for variation in strength of materials, variations in construction and minor depreciation. In addition, it is standard civilian practice to design for $100 \%$ overload where one lane at a time is used and the interval between vehicles is increased. Thus as a guide for military purposes, for infrequent use, civilian roads and bridges may be expected to carry twice the rated load capacity, where restrictions are placed on the number of lanes in use and the speed and intervals between vehicles is controlled. During hostilities, loads in excess of the above may be carried on the recommendation of the unit engineer, in accordance with the situation.

Plans must in all cases provide for engineer reconnaissance, and, where necessary, reinforcement or repair on roads and bridges under our control, and for engineer troops to accompany advance elements into unreconnoitered terrain.
c. Construction, maintenance and repair.-Advantage is taken of the available road net, and all means are utilized to repair and maintain existing roads to fulfill military requirements, rather than to build new roads. Except for short sections, new road construction is avoided. In the combat zone, no better road should be maintained or built than is essential for the immediate purpose. Minimum width of one-track road is 10 feet; twotrack road 18 feet-preferably 20 feet. Drainage is always vital; dry subgrades obtained by ditches, culverts, and smooth graded crowns are most important.

On most roads, bridges are sensitive points which may often become bottlenecks to flow of traffic. Alternate crossings or detour routes should be planned for bridges on important roads.

The following tables are given for the purpose of rapid, rough estimates; more accurate tables should be used for detailed estimates.
(1) Labor for repair of road craters.

| Method of repair | Man-hours required |
| :---: | :---: |
| Earth fill with shovels alone | $4 \times$ volume in cubic yards |
| Earth fill with shovels and trucks where hauling distance is not over 200 yards and number of trucks is $1 / 4$ number of men $\qquad$ | 2 x volume in cubic yards |
| Spaned with standard bridge trestle and bents <br> (trained workmen) | $15 \times$ diameter in yards |
| Spanned with timber bridge (trees in vicinity, trained workmen) | 60 x diameter in yards |
| Detour of corduroy (corduroy available in vicinity) <br> Detour of planks | $18 \times$ diameter in yards $9 \times$ diameter in yards |

## NOTES

(1) The volume of a conical road crater is $V=\pi \frac{D^{2} d}{12}$
where $\mathrm{V}=$ volume of crater in cubic yards.
$\mathrm{D}=$ distance across top of crater in yards.
$\mathrm{d}=$ depth of crater in yards.
$\pi=3.1416$.
(2) A rough rule of thumb is:

Fill craters under 7 yards in diameter.
Bridge or detour craters over 7 yards in diameter.
(2) Data for rough estimates of road work.
(a) Clearing and grubbing with hand tools, medium clearing,

40 feet width, $55-140$ man-hours per 100 linear yards.
(b) Earth handling with hand tools,

Excavation in average soil with pick and shovel 0-6 feet deep -1 cu yd per man-hour.
Loading average soil into trucks, using shovel in loose soil2 cu yds per man-hour.
(c) Materials required for plank-tread road ${ }^{(1)}$ for motor transporta-tion-12 tons lumber and spikes per 100 linear yds.
(d) Materials required for one-track plank road for motor transporta-tion- 35 tons lumber and spikes per 100 linear yds.
(e) Average weight of lumber is 40 pounds per cubic foot.
(f) Materials needed for 10 foot width of crushed stone or gravel roads:
$4^{\prime \prime}$ depth spread- 37 cu yds per 100 lin yd, 650 cu yds per mile.
$8^{\prime \prime}$ depth spread-74 cu yds per 100 lin yd, 1300 cu yds per mile.
1 cu yd of crushed stone weighs approximately $11 / 2$ tons, or is a light load for a $11 / 2-\mathrm{T}$ truck.
(g) Capacity of road-construction equipment:
$3 / 8$ yard power shovel-24 cu yds per hour, average soil, good operator.
Bulldozer, $60 \mathrm{HP}-50 \mathrm{cu}$ yds per hour on level, 100 ft haul.

Blade grader, $71 / 2$-ton- 440 sq yds gravel road surface scar-(self-propelled) ified and reshaped per hour. -50 cu yds of loose rock or loose earth spread per hour.

NOTE
(1) Planks running lengthwise of road on each tread.

- 194. Bridge and Ferrying Equipment.-a. Distribution of equipment.

## NOTES

a Bridges built for H-15 loads will carry any corps load or the tank., light (26,00030,000 pounds). If time and materials are lacking, an $\mathrm{H}-10$ timber trestle bridge can be built using fewer stringers and omitting one layer of flooring.
$b$ Portable Steel bridge H-10 capacity will carry all organic infantry and cavalry division loads. It will carry any vehicle with a gross weight of not over 10 tons. It will also carry the tank, light ( $26,000-30,000$ pounds) for spans of not over 48 feet.
c Portable Steel bridge, H-20 capacity will carry any corps load and any Armored or Motorized Division load to include the 30 -ton medium tank.
$d$ Exclusive of approaches; well trained troops.
n 195. Water Supply.-a. Troop requirements.-Average requirements ${ }^{(1)}$ for water by troops under several conditions of service, expressed in gallons per unit (man, animal, vehicle) per day:

## NOTES

(1) Modify according to circumstances, especially in hot climates. Maximum requirement may exceed the average by from 15 to 100 per cent.
(2) $1 / 2$ gallon per man and 3 gallons per animal is the absolute minimum, for not more than three days.
b. Capacity of water-supply equipment.-

## NOTES

(1) Water supply equipment, engineer. Each set includes: one portable purification unit complete with capacity of 55 g.p.m. as a simple pump, and $10 \mathrm{~g} . \mathrm{p} . \mathrm{m}$. when purifying (filtering); three 55 g.p.m. power pumps; and two 3,000-gallon canvas storage tanks.
(2) Water supply equipment, topographic battalion. Each set includes: one portable purification unit (capacity as above); two 55 g.p.m. power pumps; and one 3,000 -gallon canvas storage tank. Used normally in connection with map reproduction operations and available for general use in extreme emergency only.
(3) Water supply equipment, water supply battalion. Each set includes: eighteen 55 g.p.m. power pumps; eighteen 3,000 -gallon canvas storage tanks; and six 260 -gallon canvas storage tanks.
(4) Water supply equipment listed in note (3) plus 6 purification trucks, each of capacity of 100 g.p.m. as simple pump.
(B) One purification truck per company, used as a simple pump.
(6) Six purification trucks listed in note (4) each of capacity of $70 \mathrm{~g} . \mathrm{p} . \mathrm{m}$. when purifying (filtering).
(7) One purification truck per company, used for purifying.
(8) Canvas storage tanks of water supply equipment. (See note (3).)
(9) Storage and transportation capacity of the thirty 750-gallon tank trucks of each company.
c. Equipment issued to troop units.-Organizations are supplied with ten-gallon cans for carrying water. A $11 / 2$-ton truck will carry 30 cans (filled).

| Regiment, Aviation | 7425 | 3000 | 10425 |

b. Zones of demolitions.-

Approximate amount of explosives to create an effective antimechanized barrier in average rolling terrain with numerous streams and routes of communication 1 ton per square mile. In thickly settled areas _-_-_-_-_-1/2 ton or more per square mile.

- 197. Field Fortifications.-a. General arrangement of defense areas to include the battalion.
(1) Platoon defense area providing for all-around defense.
(2) Company defense area composed of platoon positions, located for mutual protection by flanking fires.
(3) Battalion defense area composed of company positions distribute $\alpha$ in width and depth, with rearward positions covering the intervals between forward positions, and heavy weapons sited to furnish flanking fires in front of and within the position, and in front of adjacent battalion positions.
b. Priority of work.-Under average conditions, the defensive measures taken to organize the ground will follow the general group sequence shown below. The priority of tasks within groups is not indicated, since several items of work normally proceed concurrently. The priorities are of value as a general guide, and should be modified to meet existing conditions.
(1) Deployed defense (when attack is imminent or already launched): Road blocks.
Antitank obstacles and mine fields.

Digging foxholes (pits for individuals).
Digging shallow emplacements for automatic weapons.
Removing small obstructions to improve the field of fire of individual weapons.
Establishing temporary command and observation posts.
Camouflage of installations and suppression of signs of occupation.
(2) Hasty fortifications (to be completed in approximately six hours):

Machine gun, mortar, and antitank gun emplacements.
Improvement of fields of fire.
Squad trenches, simple standing type, or slit trenches, in platoon positions on main line of resistance (developed by connecting individual foxholes)
Continuous obstacle in front of main line of resistance, based if possible on a natural barrier, to include antitank mine fields, tank obstacles, and road blocks.
Shallow connecting trenches between squad or slit trenches in platoon positions.
Improvement of temporary command posts, observation posts, and aid stations.
Provisions for camouflage, in all tasks, utilizing natural cover to the maximum.
(3) Improvement of hasty fortification:
(a) 1st Priority.-

Camouflage to conceal the nature, extent, and location of the principal installations.
Remaining squad trenches, simple standing type or slit trenches, on main line of resistance and in company and battalion reserve areas.
Shallow connecting trenches.
Obstacles protecting platoon positions.
Strengthening and extending natural and artificial antimechanized obstacles.
Permanent command posts, observation posts, and aid stations.
(b) $2 d$ Priority.-

Squad trenches, simple standing type or slit trenches, in platoon and company positions on regimental reserve line. Completion of fire trenches and obstacles in company areas on main line of resistance.
Strengthening and extending natural and artificial antimechanized obstacles.
Communication trenches from regimental reserve line to main line of resistance.
(c) 3d Priority.-

Completion of trenches and obstacles in the position.

Strengthening and extending natural and artificial antimechanized obstacles.
Improvement and camouflage of covered routes of communication leading from rear areas to the regimental reserve line.
Construction of shelters.
(d) 4 th Priority.

Continued improvement of all defensive works, and their camouflage.

Figure 39-Trench nomenclature.

Figure 40-Simple standing trench (Showing development into standard fire trench, types A and B).
c. Works (figures given are for daylight work; for work at night, increase labor by $50 \%$ ).-(1) Trenches.-(a) Work capacity of a platoon of three 12 -man squads for eight hours, medium soil, with pioneer tools:
(i) Simple standing trench (Figure 40), 120 linear yards.
(ii) Standard fire trench, type A (Figure 40), 48 linear yards.
(iii) Standard communication trench, type A, 60 linear yards.
(b) In estimating for slit or other type trenches than the above, allow 15 cu. ft. per man hour, average soil, using pioneer tools.
(2) Obstacles.-(a) Against personnel.-Single belt of double apron fence, 1000 yards long, requires approximately five (5) tons of materials and 380 man-hours of labor. Work capacity of 3 -squad platoon in eight hours is approximately 750 linear yards of double apron fence, or 450 yards of high wire entanglement.
(b) Against mechanized vehicles.-(i) Antitank mine field, 1000 yards long, mines laid directly from truck in $3-6$ rows, density of $11 / 2$ mines per yard of front, requires:

Man-hours (average) Daylight Night

Mines laid and buried, soft soil _...........- 80
Mines laid and buried, medium soil _-....-_100 150
Mines laid and buried, hard soil _-..........-200 300
(ii) If trucks cannot reach and travel along the axis of the mine field, man-hours for carrying mines should be added at the following rates: in daylight, one man can carry 50 mines a distance of 100 yards in one hour ; at night one man can carry 25 mines a distance of 100 yards in one hour.
(3) Clearing.-Four man-hours of labor for clearing 100 square yards of brush and a few trees up to 12 -inches in diameter; if brush only, 2 man-hours.
(4) Machine-gun emplacement.-Simple shell-hole type requires nine (9) man-hours of labor and 200 pounds of materials.
d. Intrenching equipment.-Sets of intrenching equipment of pioneer tools are carried in 1-ton trailers by organic combat engineers as follows:

| Unit | No. of |  |
| :--- | :---: | :---: |
| Sets | No. of <br> Trailers |  |
| In infantry divisions (triangular) | 36 Inf | 6 |
| In infantry divisions (square) | 6 Inf | 12 |
| In each combat regament (corps) | 2 Inf | 4 |
| In cavalry divisions | 4 Cav | 6 |

Weight of cavalry set: 1,800 pounds; volume: 105 cubic feet.
Weight of infantry set: 3,048 pounds; volume: 180 cubic feet.

Principal items of intrenching equipment set:

| Item |  |  |
| :--- | :---: | :---: |
| Axes_ | Infantry | Cavalry |
| Bars, crow | 26 | 13 |
| Mattocks, pick | 125 | 2 |
| Sandbags | 500 | 65 |
| Saws, crosscut, hand | 26 | 13 |
| Shovels, D-handled | 250 | 130 |
| Tape, tracing, 500-ft rolls | 6 | 6 |

## 198. Road Blocks and Antimechanized Measures.-a. Classification of obstacles.

|  | Classification | General Purposes | Remarks |
| :---: | :---: | :---: | :---: |
| Location: | Distant-25 miles or more. | Block lines of communication at critical points. | By air bombardment; or demolitions placed by parachute or ground troops. |
|  | Outlying-beyond normal antitank gun range (700 yards). | Impede reconnaissance, delay advance. | Placed by engineers or other arms. |
|  | Close-in-within normal antitank gun range. | Immediate protection of front and flanks of the basic unit and front, flanks and rear of subordinate units; canalize the movement of hostile mechanized units; gain time for movement of antitank guns and mechanized forces to meet the threat; limit the freedom of movement of hostile mechanized units if portion of main battle position ruptured. | Placed by troops to be protected by the obstacle, assisted by engineers. |
|  | Rear area-on line of communications. | Protect supply routes and installations. Limit freedom of movement of hostile mechanized units which have penetrated the main battle position. | By engineers or reserve units. |
| Time required for placement | Quick | Block avenues of approach on short notice (matter of minutes). | Examples: wire rolls, cables, antitank mines, wrecked vehicles, contaminated areas (when authorized). |
|  | Semi-quick | Block avenues of approach on fairly short notice (matter of several hours). | Examples: mine fields, demolitions, abatis, barricades, road craters. |
|  | Deliberate | Block avenues of approach with relatively long time available. | Examples: Antitank ditches, post obstacles, extensive demolitions, inundations, mine fields. |

b. Description and use.

| 1 | 2 | 3 | 4 | 5 | 6 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Description |  |  | Use |  |
| Obstacle | Class | Construction | Transportation | Method of installation | Rate of installation |
| Wire rolls | Quick | Issue item. Wire wound in spiral. Length extended - 40 feet. Effective against wheeled vehicles by entanglement | ```75 rolls per 11/2-ton truck``` | Group of 4 rolls placed in contact, with dirst roll suspended by a wire, across road at places where encountered unexpectedly by vehicles; 30 to 50 yards between groups. Insert logs inside one or two rolls on ground, and place antitank mines in front of and within each group | Two men place 1 roll in 1 minute |
| Cables | Quck | Heavy wire |  | Several slack strands placed diagonally across road, so as to throw vehicle into ditch | Few minutes only, using trees, buildings, etc., as anchorages |
| $\begin{aligned} & \text { Improvised } \\ & \text { road } \\ & \text { blocks } \end{aligned}$ | Quick | Local vehicles, telephone poles, felled trees, furniture, rocks, demolished buildings, etc. |  | Heaped together. Strew with contact and antitank mines (and persistent chemical, when authorized) |  |
| Abatis | Semiquick | Interlocking bands of felled trees or poles |  | Trees of 12 -inch diameter or larger; tips toward enemy. Strew with contact mines (and persistent chemical, when authorized) | Two men per tree in 15-45 minutes. Power equipment will accelerate rate of installation |
| Demolitions | Semiquick to deliberate | Destroyed culverts, bridges, buildings, etc. |  | Explosives, mechanical means, fire | See FM 5-25, and FM 5-30. |
| Post obstacles | Semiquick to deliberate | Logs, 9-10 feet long, 10-12 inches diameter; railroad rails; concrete blocks, etc., set vertically |  | Ends protruding 2-3 feet. Multiple rows, staggered | $\begin{aligned} & 100 \text { men (hand } \\ & \text { tools) }-20 \text { per } \\ & \text { hour. } 8 \text { men } \\ & \text { (power auger) } \\ & 15 \text { per hour } \end{aligned}$ |
| Road craters | Semiquick to deliberate | Blown by explosives. Must block entire roadway |  | Minimum requirementa: craters 20 feet wide, 8 feet deep, with side slopes made as steep as possible. Water makes passage more difficult | 1 squad (hand tools) per crater in 1-5 hours. Power augers desirable for drilling holes for explosive charges |

b. Description and use.-(Continued) :

| 1 | 2 | 3 | 4 | 5 | 6 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Description |  |  | Use |  |
| Obstacle | Class | Consiruction | Transportation | Method of installation | Rate of installation |
| Mine fields | Semiquick to deliberate | 3-6 longitudinal rows, 1-3 yards between rows. Density of whole: $11 / 2$ mines per yard | $\begin{aligned} & 300 \text { mines } \\ & \text { per } \\ & 11 / 2 \text {-ton } \\ & \text { truck } \end{aligned}$ | Placed along fence lines, in draws, brush, etc. for concealment. Reinforce natural obstacle | Maximum overall laying rate didirectly from trucks (carrying and burying in medium soil) about 15 mines per man-hour (Also see paragraph 197 c (2) (b).] |
| Timber obstacles | Deliberate | Log or timber crib; saw-horse ramp; $\log$ wall, etc. |  | Space between walls filled with earth, stones, etc. Fasten timbers with driftpins, cables, etc. | See FM 5-30. |
| Inundations | Deliberate | Necessary depth at least 3 feet for wheeled vehicles; at least 4 feet for light and medium tanks |  | Construction of dams; cutting existing dams, levees or dikes; diversion of streams |  |
| $\begin{gathered} \text { Antitank } \\ \text { ditch } \end{gathered}$ | Deliberate | 4-6 feet deep. 8 feet wide for light tanks; 12 feet wide for medium tanks. (For profile, see figures 41, 42 and 43.) |  | Triangular or trapezoidal type ditch, concealed by trees, brush, or ground folds | 100 feet of triangu lar ditch: 32 men (hand tools) $51 / 2$ hours in average soil |
| Contamination by persistent chemical (only when specificcally authorized by appropriate commander) | Quick to semiquick | Contaminate road blocks, demolitions and obstacales. <br> Contaminate roads and areas as part of a barrier mission | 200 chemical mines per 1 $1 / 2$-ton truck | 1 or more mines per obstacle. 200 mines per mile of road. Airplane spray: average area covered by one airplane 800 yards long, 300 yards wide | Road contamination: 8 men 1 to 2 hours per mile (day); $11 / 2$ to 3 hours per mile (night) |

| III. | Airplane messengers and pigeons | 209-210 |
| IV. | Radio communication | 211-224 |
| V. | Visual communication | 225-229 |
| VI. | Wire communication | 230-235 |
| VII. | Tables of signal equipment | 236-237 |

## Section I

## GENERAL

- 199. Classification of Messages.-a. Secrecy.-In actual or simulated tactical operations, all messages not classified as Secret will be regarded as Confidential and need not be so marked.
b. Urgency.-Messages are classified as to urgency by the writer.
(1) Urgent (D).-Commanders must restrict the use of the urgent classification to the most urgent messages; excessive use will defeat its purpose. Urgent classification, is reserved for messages requiring the greatest speed in handling.
(2) Priority ( P ).-Priority classification is used for messages of less urgency than those entitled to urgent classification but which warrant precedence over routine messages in order to reach the addressee in time for effective action.
(3) Routine (R).—Used for messages which require no special precedence. They are transmitted in the order in which they are received.
(4) Deferred (D).-The deferred classification is used for those messages whose delivery to the addressee may be delayed until the beginning of office hours of the morning following the day on which they are filed. Similar to commercial "night letter."
- 200. Use of Cryptograms.-All messages to be transmitted by radio or other means, when danger of hostile interception exists, are cryptographed except in the following cases:
a. When the tactical situation is such that time cannot be spared for cryptographing or when the information to be transmitted, if intercepted by the enemy, cannot be acted upon in time to influence the situation in question, a commanding officer or his authorized representative may order the transmission of a message in plain language by a radio station serving
his headquarters or command. Such written messages will be marked: "Send in clear" over the signature of the commander or his authorized representative.
b. Commanders of units smaller than a division may authorize the normal transmission of messages in clear text which are to be acted upon immediately in rapidly moving situations.
- 201. Rules for Use of Codes and Ciphers.-The following general rules govern the use of codes and ciphers:
a. The instructions contained in each code book or furnished with each cipher system must be carefully studied and thoroughly understood before the code or cipher is used.
b. Care should be exercised to prevent the loss or compromise of a code book or cipher key. If a code book is lost or possibly compromised, the fact should be reported promptly to higher headquarters.
c. Except as indicated in rule $i$ following, no code or cipher which has not been approved by higher authority should be employed within any unit.
d. Never repeat a message in a code or cipher system other than in the system in which it was originally sent.
$e$. Never cryptograph a message which has been sent previously in clear and never send a message in clear which has been sent previously as a cryptogram.
$f$. Never mix cryptograph and clear text in the same message except as indicated in rule $i$ following. This caution applies also to abbreviations and signs of punctuation which are equivalent to clear text.
$g$. A cryptographed message should never be filed with the clear text.
$h$. Capital letters should be employed throughout in writing cryptograms in order to avoid errors. In the case of code, the grouping of the letters of the code text corresponds to the length of the code groups as given in the book; in the case of cipher, the text is written and transmitted in groups of five letters. For a complete discussion, see AR 380-5, and FM 24-5.
i. Prearranged messages and special message codes.-In traffic by radiotelephone, it is often desirable to use some form of prearranged message or groups of letters to indicate meanings which will not readily be apparent to the enemy. These messages or groups will be changed frequently and may be prepared by local commanders as appropriate. These codes being of a temporary nature, the prohibition as to mixing of clear and cryptographed text does not apply. A map coordinate code is particularly appropriate for use in conjunction with such message codes. For example, "Advance guard motors move forward to next position" might be transmitted as "CJ" or a prearranged phrase might be used instead of a letter group. For example, "Objective taken" might be transmitted as "The fox is in his hole."

## SEction II

## MESSAGE CENTER

- 203. Purpose.-The sole purpose of the message center is to speed the transmission of messages. The message center chief selects the means of transmission of messages which are entrusted to the message center; the encryptographing and decryptographing of messages is also performed by the message center personnel.

204. Location.-Message centers are located at all command posts and at the rear echelon of the headquarters of larger units. Advance message centers may be established at advance command posts or at any other location where they are needed to speed the transmission of messages. They are frequently employed as collecting points for messages from several reconnaissance detachments or to facilitate signal communication with advanced units or units operating on a flank. When the commander or an echelon of the headquarters moves in column on a march, a message center operating in a vehicle accompanies the command group.

- 205. Limitations.-The message center is not organized or equipped to perform stenographic or clerical work pertaining to the headquarters which it serves. It is not equipped to prepare copies of outgoing messages for multiple distribution, nor to prepare additional copies of incoming messages for multiple distribution. When transmission of mimeographed or printed material to a number of addressees is desired, all copies required for each addressee are delivered to the message center, wrapped, packaged, or otherwise secured, and plainly marked with its destination. Each such package, envelope, or container is handled by the message center as a single message and will be delivered by messenger.

The message center is not responsible for those messages which are: $a$. Transmitted directly by the writer to the addressee by telephone or personal agency.
b. Handled by the military or civil postal service.
c. Local messages between staff sections or individuals at the same location.

- 206. Number of Copies of Messages.-Except with secret messages, the writer should provide the message center with an additional copy of each message for use by the message center should verification of delivery become necessary.
- 207. Secret Messages.-In tactical operations when time permits, secret messages will normally be carried by a staff officer or special messenger operating as a direct agent. They may be transmitted by electrical or other means available to the message center when the time of transmission can be reduced thereby. The writer of an outgoing secret message, which is to be cryptographed, submits to the message center only a single copy of the message. When the message is cryptographed the original of the plain text message is marked, "Sent in secret code" and is returned to the writer.
- 208. Time Involved in Message Transmission.-a. Message Center.(1) Recording.-Maximum time permitted for recording operations should not exceed 20 seconds. The total message center time, unless cryptographing is required, should not exceed 2 minutes.
(2) Cryptographing and decryptographing.-The rates are based upon one man working alone.

## Cipher device or code Code groups per minute

b. Operator.-The message rates are based upon calling, transmitting, and acknowledging receipt of a message of ten code or cipher groups or ten words of clear text with address and signature.

| Means | Rate |
| :---: | :---: |
| ngle Line Manual) _._._28-36 messages per hour |  |
| Telegraph printer------------60-100 messages per hour |  |
| Radiotelegraph ---------------15-25 messages per hour |  |
| Radiotelephone --------------10-15 messages per hour |  |
|  |  |
| Semaphore flag-.-.-.-.-.-.-.-.-.- 15 messages per hour |  |
| Wig-wag flag.-.-.-.-.-.-......-. 10 messages per hour |  |
| nel_------------------------30 code groups per hou |  |

c. Messenger:

Kind
Miles per hour

## SECTION III

## AIRPLANE MESSENGERS AND PIGEONS

- 209. Airplane Messengers.-Messages transmitted by airplane may be delivered directly by the pilot, observer, or other messenger on the ground or from the airplane in flight by radio, pyrotechnics, or other visual means, or by dropping.

Messages are picked up by airplane observers from units down to and including the battalion when requirements for a pick-up field can be met. By prearrangement, messages may be picked up from any unit or detachment. This means of message delivery is available to those ground troops equipped with panels.

- 210. Pigeons.-Homing pigeons may be used as one-way message carriers between the point of release and the point where they have become accustomed to find their home loft.

Normally pigeons fly during clear daylight only. By special breeding and long training, pigeons can be taught to fly at night.

Normal rate of flight: $1 / 2$ to $3 / 1$ miles per minute.
Normal range from home loft: 60 miles.
Time required to train birds to return to a loft after each change of location: 5 days to 2 weeks.

Maximum time birds should remain away from home loft before release: 2 days and 3 nights.

## SECTION IV

## RADIO COMMUNICATION

- 211. General.-Radiotelegraphy is the normal means of radio communication.

Radiotelephony is limited to special uses between airplanes, between airplanes and ground, between vehicles of mechanized units, between ground stations and vehicles, for artillery fire control and liaison, and for control of forward combat units.

Radio communication within a tactical unit on the march may be established at prearranged times and places or between vehicular stations accompanying the units and operating while actually on the march.

Within the range of the sets radio communication is the most effective means of signal communication between rapidly moving units when the maintenance of wire and messenger communication is impracticable.

The range and quality of radio communication are seriously affected by the weather. Likewise they are affected to a varying degree, depending upon the frequency used, by the nature of the intervening terrain or obstacles, such as high hills, wooded areas, large structures of reinforced concrete and steel, pole lines carrying conductors, and by the time of day (or night).
212. Enemy Interference.-Hostile radio stations can interfere deliberately with our radio communication by blocking a single frequency or band of frequencies and by deception, that is, causing our stations to accept false or erroneous information and messages.

- 213. Enemy Interception and Position Findings.-Radio communication is subject to interception by hostile stations. The approximate number and locations of our radio stations can be determined by hostile positionfinder stations. From this information the enemy can estimate the disposition and approximate strength of our forces. These disadvantages of radio communication can be minimized by:
a. Curtailing the use of radio when the information transmitted would be of most value to the enemy.
b. Establishing dummy stations and sending false messages to cause errors in his deductions.
c. Rigid radio discipline and the habitual use of authorized codes and ciphers for all radio messages.
$d$. The habitual use of simple prearranged codes during tactical operations. Prearranged messages or phrases containing information which it is anticipated reconnaissance and security detachments will secure, or directing the executing of prearranged plans, can be transmitted by a single code word or group.
- 214. Type Radio Nets, Square Division.

- 215. Type Radio Nets, Triangular Division.

- 216. Type Radio Nets, Cavalry Division.- (Upper) AntiaircraftAntitank Warning Net. (Lower) Cavalry Division Command Net.

e. Plat Comdr Ren Plat Ha Co
f. Bn M O
g. $\mathrm{Bn} \mathrm{S}-4$
27. Clear Channel Requirements:

The net organixation indicated in 1 to 26 above requires 41 clear channels within the frequency rance of the authorized vehicular sets. In addition, chanals for the SCR-194 and SCR-195 sets are required in seneral as follows: 4 for the infentry regiments, armored: 10 for the field artillery regiment: and 8 for the field artillery battalion. The infantry regiment, armored requires in addition, one (1) channel for the operation of a regimental command net employing low-powered portable sets. These shannels are minimum requirements; availability of additional channels permits reduction of number of stations in any particular net. Additional artillery air-ground channein aro particularly deairable.

Will temporarily replace sets SCR-131 and 161 until sets SCR-284 and 285 are available. |

## Section V

## VISUAL COMMUNICATION

225. Employment.-Visual communication is unsuited for the transmission of long messages but is well suited for transmitting prearranged signals, short code groups, and brief messages for fire control, laterally and from front to rear between small units and between ground and airplanes.

- 226. LAMPS.-Signal lamps are authorized for issue to headquarters of light field artillery battalion, and signal stations of coast artillery harbor defense headquarters only. Signal lamps may be improvised by using standard flashlights.
- 227. Flags.-The general use of flags as a means of visual communication has been discontinued.

228. Pyrotechnics.-Pyrotechnics are an emergency means of sending short urgent messages. Due to the limited number of distinguishable signals available, meanings assigned to signals are usually limited to the following uses:
a. From front-line units to cause artillery fire to commence, cease, or lift.
b. To indicate arrival of units at important terrain features or to coordinate attacks when no other means are available.
c. From airplanes to call for display of marking or identification panels.

Meanings are assigned pyrotechnic signals by the superior headquarters in signal operation instructions and should be changed frequently for secrecy and to prevent the enemy from using similar pyrotechnics to confuse infantry-artillery liaison.

- 229. Panels.-a. Use.-Marking panels are displayed by troops in combat on signal from the infantry liaison airplane in order that the airplane may report their progress and location to higher headquarters. These panels are issued on the basis of 3 black and 3 white to a rifle squad and should be used for no other purpose than that for which issued; the black panels are used on snow.

Signaling panels are issued for communicating with aircraft and for the location and identification from the air of unit command posts on request by aircraft.

An identification code number is assigned to each headquarters in signal operation instructions. The unit is identified from the air on request by friendly aircraft by displaying the identification group indicator prescribed in the current air-ground liaison code in combination with the numerical identification number assigned to the unit in the current signal operation instructions. See FM 24-5.
b. Display grounds.-Panel display grounds are located near the radio station since the panel operators are normally also the radio operators, and communication from the airplane is normally by radio. Care must be exercised to see that panels are displayed only to friendly aircraft who have identified themselves as such by use of a prearranged signal or code group. Upon the approach of hostile aircraft the friendly airplane should first be warned and then panels should be taken up and concealed.
c. Communication with airplane.-In an emergency, when a ground station is not equipped for radio reception or when the radio transmitter of an airplane is silenced or out of commission, an airplane may communicate to a limited degree with a ground panel station by means of various maneuvers of the airplane while in flight. No standard code has been developed for this means of communication but any code used should be prescribed in sighal operation instructions. Individual units devise such codes by coordination with observation aviation designated to operate with them. Adjustment of the fire of field artillery batteries using only panel signals and airplane wing signals is both rapid and practicable.

## Section VI

## WIRE COMMUNICATION

E 230. Telephone.-a. Powers and limitations.-The distance over which satisfactory telephone communication is possible is determined by the electrical characteristics of the telephone circuit. A given type of wire circuit has a definite talking range (paragraph 232 b). Telephone conversations should be brief. Long conversations deprive others of the use of the circuits. The telephone should not be used for long reports, orders, or messages when messenger or telegraph communication would serve as well or better. Telephone conversation must be discreet since secrecy is never assured.
b. Urgent calls.-Because of the limited number of wire circuits between telephone centrals, they will often be found busy. In order to avoid delaying an important critical call, certain designated personnel may be authorized to class a telephone call as urgent when they believe it is more important than any call which may be in progress. In placing an urgent call the calling party adds "Urgent call" after the designation of the called party, as: "Magic six, urgent call." The urgent classification should be used cautiously. An urgent call is completed.by a switchboard operator with all possible haste by interrupting any routine call which may be in progress. - 231. Telegraph Printer.-The telegraph printer is a telegraph instrument designed for interchanging printed messages between two or more stations. It is employed between headquarters in the same manner as the manual telegraph. Data relative to the employment of the telegraph printer will be found in FM 11-5.

- 232. Wire Communication Data.-The following data are furnished for use in planning for the construction of wire lines:
a. Rates of construction.-(1) Field wire line.-Construction unit: 1 wire-laying team (FM 11-10 and 11-15).

| 1 | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: |
| Wire laying equipment | Miles per hour |  |  |  |
|  | One circuit |  | Two circuits concurrently |  |
|  | Cross country | Roads | $\begin{gathered} \begin{array}{c} \text { Cross } \\ \text { country } \end{array} \\ \hline \end{gathered}$ | Roads |
| Reel cart RL-16 | 1 | $11 / 2$ | 1 | 11/2 |
| Reel unit RL-26 or RL-26-A (mounted in truck) $\qquad$ | 11/2 | 2 3 -5 | 3-5 | 3-5 |
| Axle RL-27 or RL-27-A | 1. | $11 / 2$ |  |  |

(2) Open wire pole line.-Construction unit: 1 construction platoon of war-strength construction company (FM 11-20).

| 1 | 2 | 3 |
| :---: | :---: | :---: |
| T'ype of construction | Weight of material in pounds per mile | Average miles per 3-hour day a |
| Iron pole line, 1 circuit on cross arm and single wire on top of pole | 6,420 | 3 |
| Iron pole line, 2 circuits on cross arms and single wire on top of pole | 7,042 | 21/2 |
| Light pole line, 3 circuits on 6 -pin cross arm. (Light 20 foot poles or 4 by 4's with 2 by 4's for cross arms with knob insulators) | 5,093 | $21 / 2$ |
| Standard pole line, 5 circuits on 10 -pin cross arm. Poles to be serviced and set, using earth-boring machine | 11,590 | 2 |
| Stringing wire on installed poles-addition of one 10 -pin cross arm with 5 circuits | 3,598 | 5 |
| Single-bracket line on installed poles | 466 | 20 |

## NOTE

a. The rate at which open wire lines may be constructed will depend upon the size of the working party, the number oi circuits required, the weather, and the type of terrain, and the facilities for distributing poles and materials. The chief factors are transportation and road congestion. The data listed above are based on the assumption that the poles and material have been distributed along the route and that average conditions prevail.
b. Normal talking range on wire circuits.-Using standard equipment without repeaters, the normal talking ranges on nonloaded wire circuits are as follows:

| 1 | 2 | 3 | 4 |
| :---: | :---: | :---: | :---: |
| Wire type | Range in miles | $\begin{gathered} \text { Weight } \\ \text { (pounds } \\ \text { ner mile) } \end{gathered}$ | Remarks |
| W-38 | 18 | 240 | Commercial outside distributing wire |
| W-73 | 50 | 39 | No. 17 AWG bronze; 8 -inch spacing, dry weather |
| W-74 | 200 | 166 | Commercial bare copper No. 10, AWG, 12inch spacing, wet weather |
| W-108 | 18 | 216 | Commercial parallel drop wire |

(2) Training editions.
(4) 3 per Rifle Squad. 1 Rer Company and Platoon.
(6) CW means continuous wave telegraph.

(8) Consists of telephone and $1 / 4$ mile assault wire. Also 20 per Weapons Company and 2 per Rifle Company.

## Chapter 9

## CAMPS AND BIVOUAC AREAS

- 238. Cantonments.- $a$. Considering the theater of operations-as a whole, barracks probably will have to be provided for about $60 \%$ of the total force plus $100 \%$ of the prisoners.
b. Space requirements for sleeping quarters are as follows:

Zone of the Interior.
Normal: 60 sq. ft. floor space and 720 cu . ft. air space per person.
Minimum: 50 sq . ft. floor space and 500 cu . ft. air space per person.
Theater of Operations (for seasoned troops).
Normal: 40 sq. ft. floor space and 400 cu . ft. air space per person.
Emergency: 20 sq. ft. floor space and 200 cu . ft . air space per person.
c. In cantonment, the building area for a 1000 -man unit is 8.3 acres. However, large forces require a greater proportional area because of the desirability of dispersion, as a security measure, and to provide training, parking, and storage facilities.

Approximate area for square division is 220 acres.
Approximate area for triangular division is 160 acres.
Approximate area for cavalry division is 200 acres.
Approximate area for armored division is 180 acres.
(Areas for drill, supply facilities, hospital and paddocks not included.)

- 239. Billeting.-In hostile territory billeting is resorted to when desirable. The capacity of a locality for billeting is approximately as follows:

Rich farming country - $\mathbf{1 0}$ per inhabitant

## Cities

Average American city $\quad-20$ per vacant dwelling
Vacant buildings and dwellings in average city $\quad-20 \%$ of population
(Inhabitants may be caused to move to vacancies in order to concentrate military activities.)
With inhabitants furnishing subsistence

- $200 \%$ of population for one week.

240. Semipermanent Camps.-a. Tactical and terrain conditions will largely determine the actual dimensions of sites for semipermanent camps. Whenever possible, areas should be selected for semipermanent camps ${ }^{\text {* }}$ which will permit such camps to be so arranged as to provide for the comfort and convenience of the command.
b. There are many possible arrangements of facilities in a semipermanent camp. Data on them are given in a number of arm and service field manuals. A typical arrangement of such a tent camp which has been found satisfactory is shown in the following diagram:

## DIAGRAMMATIC LAYOUT OF A TENT CAMP

It is desirable to assign 6 men per large pyramidal tent with a maximum of 8 men. The area of open ground for an infantry regimental combat team (war strength) would be about 50 acres. The initial estimate of the total area for any unit may be figured on the basis of 50 sq . yds. per man, 50 sq. yds. per animal, and 100 sq. yds. per vehicle ( 10 acres per 1000 men or animals, 5 acres per 100 vehicles). This includes room for roads and assembly areas.
c. In a camp for units of the combined arms it will usually be desirable or necessary to have regimental or separate unit camps dispersed to a greater or less degree, with a minimum area for a division of about 480 acres. In the presence of the possibility of air attack, such a camp should not be established, but shelter should be dispersed, by battalion or company units, camouflaged, and advantage taken of existing cover and shelter.
d. Shelter Tent Camp.-The camp may be arranged as shown in the diagram, or shelter tents may be pitched in lines parallel to the vehicles of each company or similar unit (motorized units). Parking of vehicles abreast facilitates the use of individual vehicles; parking in close column facilitates the entry into camp and resumption of the march. Because a shelter tent camp generally is occupied only a short time, intervals may be reduced from those used in a semipermanent camp.

- 241. Bivouac Areas.-In the presence of a hostile air threat, or when tactical considerations govern, or when the nature of the terrain makes it desirable units will bivouac in a dispersed formation and without formal alignment of their elements. Full use will be made of cover, and vehicles will be camouflaged, and parked to facilitate their movement. The bivouac area of a regimental combat team, consisting of an infantry regiment and a field artillery battalion under conditions requiring maximum use of overhead cover, will vary in excess of 50 acres in proportion to the amount of cover available.
- 242. References.-FM 100-5, Halts and Security during halts, for tactical considerations in the selection of camp and bivouac areas.

FM 100-5, for detailed information regarding security measures.
FM 100-10, for administrative considerations.
FM 5-5, Shelters and Camps; FM 5-10, Construction; and Quartermaster Handbook for data on construction of shelter.

FM 21-10, for sanitation.

[^15]
## Chapter 10

## MOVEMENT BY AIR TRANSPORT

243. Outline of Procedure.-The following outline presents a procedure which may be followed in a troop movement by air transport (see diagram below).
a. Orders are issued by higher authority to the commander of the unit to be moved and to the commander of the air task force (see paragraphs 244 and 245).
b. The commander of the unit to be moved and the commander of the air task force prepare initial studies of requirements and means available (see paragraph 246).
c. The commander of the unit to be moved and the commander of the air task force confer with reference to matters of combined action (see paragraph 247).
d. As a result of the conference(s) the commanders concerned prepare a general plan for the operation.
$e$. This general plan is submitted to higher authority for approval.
$f$. Based upon the approved general plan, the commanders concerned agree on matters which require further coordination.
g. Respective commanders prepare detailed plans and orders for the operation (see paragraphs 248 and 249).

Figure 58

## MOVEMENT BY AIR TRAMSPORT <br> OUTLINE OF PROCEDURE

Unit to be moved.

Air Corps.

Numbers indicate sequence of procedure.

■ 244. Orders to Unit TO Be Moved.-Orders from higher authority to the unit to be moved include such of the following as are applicable:
a. Composition of unit.
b. Destination (s).
c. Mission of unit and general plan of the operation.
d. Designation of departure airport (s).
e. Movement to departure airport(s).
(1) Movement from training areas.
(2). Quartering arrangements at or near airport(s).
$f$. Date and hour air transport movement begins.
g. Probable length of time during which the unit must be self-sustaining as to supply.
h. Restrictions on amount or type of equipment or supplies to be taken.
i. Provisions for subsequent supply.

- 245. Orders to the Air Task Force.-Orders from higher authority to the air task force include such of the following as are applicable:
a. Composition of air task force.
b. Mission of the air task force and general plan of the operation.
c. Unit to be transported.
d. Destination (s).
e. Designation of departure airport(s).
$f$. Date and hour air transport movement begins.
$g$. Probable length of time during which air transport will be required.
- 246. Initial Studies.-Based upon the orders received, commanders concerned make initial studies covering such of the matters indicated below as are applicable:
a. By the commander of the units to be moved:
(1) General plan (s) of action of unit upon arrival at destination.
(2) Strength and composition of unit (see paragraph 250).
(3) Total weight of supplies and equipment (see paragraph 251).
(4) List of bulky items, including name, volume, weight, and number of items.
(5) Method of loading desired (combat, convoy, commercial).
b. By the commander of the air task force:
(1) Number and type of airplanes that can be made available for the operation.
(2) Distance between airport (s) and destination(s).
(3) Plan of support by combat aviation.
(4) Maintenance and supply requirements.
- 247. Conference Between the Commander of the Unit to be Moved and the Commander of the Air Task Force.-Upon completion of initial studies, the commanders concerned discuss such of the following subjects as are applicable:

## a. General considerations.

(1) Number and type(s) of airplanes available for the air transport movement.
(2) Loading capacity of each type of airplane.
(3) Determination of number and type of airplanes for each unit to be moved (see paragraph 252).
(4) Priority of movement of units.
(5) Consideration of composition of serials.
(6) Adjustment between the airplanes and time available for the movement; and the troops, equipment, and supplies to be moved.
(7) Airplanes required for resupply of unit to be moved (see paragraph 252).
(8) Total number of airplanes by type to be used for the movement.
(9) Employment of observation aviation.
(10) Coordination with Air Defense Command to include number of airplanes, type, formation and time of take-off and landing.
(11) Training matters; such as, combined training, rehearsals, practice loading and unloading.
b. Arrangements at departure airport(s).
(1) Date and hour of arrival of unit to be moved.
(2) Loading point for each airplane.
(3) Loading materials to be furnished.
(4) Hour loading begins.
(5) Ground traffic control measures.
(6) Provisions to keep runways clear of personnel and equipment.
(7) Coordination between loading and servicing of airplanes.
(8) Air defense measures.
(9) Communications to be employed during movement.
c. Arrangement for movement to destination(s).
(1) Support by combat aviation.
(2) Movement of serial commander and air commander in the same airplane in order to facilitate arrangements for landing.
(3) Air reconnaissance of landing field by serial commander and air commander prior to landing at destination.
d. Arrangements at destination(s).
(1) Coordination of operations of combat aviation, parachute troops, and air-landing troops. This includes such matters as: time at which, and area within which, bombing operations cease; seizing and clearing of landing areas by parachute troops; time of landing of airplanes; and air support of ground operations.
(2) Provisions for taxiing to unloading points immediately upon landing.
(3) Rapid unloading of personnel and equipment.
(4) Movement of personnel and equipment from unloading points to positions off the field.
(5) Provisions for unloaded airplanes to take the air without delay as protection against hostile combat aviation.
(6) Provisions for keeping runways clear of obstructions.
e. Subsequent movements.
(1) Completion of troop movement.
(2) Provisions for resupply and evacuation.
(3) Continuation of air support by combat aviation. NOTE
While in flight, control of parachute and air landing troops is necessarily exercised by the commander of the supporting air task force. After their landing has been effected, the control of these troops reverts to their own commander.
248. Plans and Orders of Unit to be Moved.-The detailed plans and orders prepared by the unit to be moved include such of the following as are applicable:
a. Movement from training area to vicinity of departure airport(s) :
(1) March table.
(2) Entraining table.
b. Movement to loading points at departure airport (s) :
(1) Loading of trucks to correspond to loading of airplanes (loading of personnel and equipment for one airplane on one truck or two trucks, depending on capacity of trucks).
(2) Orders for movement to loading points, including such matters as time, route, traffic control, loading arrangements, guides, and marking of loading points.
(3) Loading airplanes (see paragraph 253).
c. Movement to destination(s) :
(1) Air transport movement table (see paragraph 254).
(2) Initial operations at destination, including such as unloading arrangements, procurement of transportation, and tactical dispositions.
249. Plans and Orders of Air Task Force Commander.-The detailed plans and orders prepared by the air task force commander include such of the following as are applicable:
a. Arrangements for procurement of necessary transport airplanes.
b. Arrangements for procurement of supporting combat aviation.
c. Provisions for gaining air superiority.
d. Arrangements with Air Defense Command for antiaircraft protection.
e. Coordination with Air Defense Command regarding number of airplanes employed, type, formation, and time of take off and landing.
$f$. Arrangements at departure airdromes for the following:
(1) Servicing and maintenance facilities.
(2) Messing and housing of air and ground crews.
(3) Use of meteorological facilities,
(4) Coordination with units to be moved for the time of their arrival at departure airdrome(s).
(5) Arrangements for the time of arrival of airplanes for the movement.
(6) Designation of loading point for each airplane.
(7) Ground traffic rules.
(8) Air traffic rules around airdrome(s).
(9) Issuance of maps and orders for the movement.
g. Movement to destination (s).
(1) Orders issued for continuous support of air transport movement by combat aviation.
(2) Arrangement for reconnaissance of landing fields.
h. At destination.
(1) Coordination of operations of parachute troops, air landing troops, and combat aviation.
(2) Orders issued to cease bombing operations in certain areas.
(3) Arrangements for landing of the transport airplanes.
(a) Air traffic rules.
(b) Ground traffic rules.
(4) Tentative unloading points designated.
(5) Orders for immediate takeoff of transport airplanes after unloading and return to departure airdrome.
(6) Continuous air support of ground operations.

- 250. Form for Showing Strength and Composition of Unit.

UNIT (INFANTRY BATTALION \& DETACHMENTS)

| Organization | Personnel to be transported by air |  | $\begin{gathered} \text { Personnel to } \\ \text { remain } \end{gathered}$ |  |
| :---: | :---: | :---: | :---: | :---: |
| $\because$ | Officers | Men | Officers | Men |
| Hq\& Hq Det ( Bn ) | - | - | - (a) | -(a) |
| Com Sec |  |  |  |  |
| Rifle Co | , |  |  |  |
| Hy W Co |  |  |  |  |

(a) Includes: (list of personnel to remain)

NOTE
Similar tables are required for all units to be moved.
E 251. FORM OF EQUIPMENT TABLE.-The following extract illustrates the preparation of an equipment table. The figures are only illustrative andshould not be considered as the number actually involved.

|  |  |  | EQUIPMENT TABLE lst Bn lst Inf (Designation of unit) |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 2 | $s$ | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| $\begin{gathered} \text { No. } \\ \text { of } \\ \text { Items } \end{gathered}$ | Item | Pounds <br> per item | Basis for computation | Bn $H q$ Det | $\underset{\text { Som }}{\text { Soc }}$ | $\stackrel{M e d}{\text { Sec }}$ | Rife Cos | Hv Co | Total pounds $\underset{\text { item }}{\text { per }}$ |
| 350 | O and EM (pistol, 7 w/o arms) | 190 | Includes light pack, pistol \& am, 1 D-ration. (Med: same except no pistol \& am) | $\begin{array}{r} (10) \\ 1,900 \end{array}$ | $\begin{array}{r} (20) \\ 3,800 \end{array}$ | $\begin{array}{r} (30) \\ 5,700 \end{array}$ | $\left[\begin{array}{c} (140) \\ 26,600 \end{array}\right.$ | $\begin{array}{r} (150) \\ 28,500 \end{array}$ | $\begin{array}{r} (350) \\ 66,500 . \end{array}$ |
| * * | Other personnel | * | * * * |  |  | * * | * * |  | * |
| Ordnance equipment \& ammunition (in addition to individual) |  |  |  |  |  |  |  |  |  |
| 4 | Mortars, 81-mm, complete | 136 |  |  |  |  |  | 544 | 544 |
|  |  |  |  |  |  |  |  |  |  |
| Quartermaster equipment |  |  |  |  |  |  |  |  |  |
| Signal equipment |  |  |  |  |  |  |  |  |  |
| Medical equipment |  |  |  |  |  |  |  |  |  |
| Total men and equipment with D-ration |  |  |  | * * |  | * * | * * | * * | * * |
|  | C-ration | 6 | Accompanies personnel | * . ${ }^{\text {, }}$ | * * | * * | * * | * * | * * |
| Total men, equipment and rations |  |  |  |  | * |  |  |  |  |

NOTE
Similar tableo are required for all units to be moved.

- 252. Airplanes Required.-A method of computing the number of airplanes required by type for an air transport movement is indicated below.

| Unit to bs <br> moved | Pounds to be <br> transported | (a) Airplanes required |  |
| :--- | :--- | :--- | :--- |
| Inf Bn | Type (b) | Type (b) |  |
| FA Bn Bn <br> Parachute <br> Bn <br> (List all <br> other units <br> similarly) |  |  |  |

(a) Ordinarily weight is the controlling factor. In the case of bulky items, volume and dimensions must be considered.
(b) The number of airplanes required by type is determined by dividing the pounds to be transported by the net cargo capacity of each type.
253. Airplane Loads.-Based upon the type of airplane assigned, a detailed loading plan, as indicated below, is prepared for each type of unit to be moved.

LOADING TABLE
Organization (Co A 1st Inf)
Loading Point No.

| Quantity | Unit | Where carried | $\begin{gathered} \text { Unit } \\ \text { Weight } \end{gathered}$ | Total Weight | Remarks |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Officer | Pilot's compart- | 190 | 190 | Co. Comdr. |
| * |  | $\operatorname{ment}_{*} \quad *$ | * |  |  |
| 12 | Chests, Cal . 30 | Main cabin | 20 |  |  |
|  | $\mathrm{M}_{*} \mathrm{G}$ am ( lt ) |  | * | $\underset{*}{240}$ | * |
| * | Total weight, personnel and equipment. |  |  |  |  |

MOVEMENT BY AIR TRANSPORT
254. Air Transport Movement Table.-The following extract illustrates the method of preparing an air transport movement table.

| Annex <br> Maps: $\qquad$ to FO $\qquad$ $\qquad$ |  |  | AIR TRANSPORT MOVEMENT TABLE |  |  |  | Organization <br> Place. <br> Date; Hour |  |  |  |

- 256. SUPPLY FACTORS.-Factors, other than tactical, influencing supply by air transport consist of:
a. Characteristics of air transport:
(1) Pay load carrying capacity of the airplane in tons.
(2) Cubature of space available.
(3) Door dimensions and conformity of fuselage areas.
(4) Amount of pay load capacity to be reserved for fuel for the airplane for return trip when required.
b. Supply characteristics:
(1) Weight of supplies to be moved.
(2) Volume and dimensions of items.

## Chapter 11 MISCELLANEOUS DATA

- 257. Factors for Conversion of Units.-To convert A to B, multiply A by C. To convert B to A, multiply B by D.

NOTES
a Normally express speed as a number of nautical miles per hour.
b A mil is the angle subtended by an arc of 1 unit on a radius of 1,000 units or, in other words, an angle the tangent of which is approximately (small angles) $1 / 1,000$. The arbitrary value of the mil adopted by the United States Army is $1 / 6,400$ of a circle.
c Exact values.

| Trucks and truck-drawn artillery | -------.-. 2 |

- 260. Carrying Capacity of Ice:b

3 inches
Small groups of men
4 to 5 inches .............-. Horse cavalry in small groups

9 to 12 inches _-----------.--.-.-.-Division loads ( 10 tons)

16 inches Twelve-ton loads
20 inches .---.-----Army loads (approximately 20 tons) $b$ New sound ice in floating contact with the water.

- 261. Characteristics of Methods of Expressing Directions of Angular Measurements:

| Designation | Units of angular measurement used | Base direction | Dircction of measurement | Method of expression |
| :---: | :---: | :---: | :---: | :---: |
| Azimuth | $\begin{aligned} & \text { Degrees or } \\ & \text { mils } \end{aligned}$ | True, magnetic or grid (Y) north unless otherwise stated (south may be used) | Clockwise | True (magnet ic) (grid) <br> (Y) azimuth <br> -., mils (.-o <br> --') |
| Bearings | Degrees | True or magnetic north and south; whichever is designated | $\begin{aligned} & \text { Direction which gives } \\ & \text { smallest arce (must } \\ & \text { not exceed } 90^{\circ} \text { is is } \\ & \text { used and is designated } \end{aligned}$ | $\mathrm{N}_{\mathrm{E}(\mathbb{W})}^{(\mathbb{W})^{--}-1}$ |
| Compass | $\begin{aligned} & \text { Points }\left(11^{\circ}\right. \\ & 15^{\prime} \text { each) } \end{aligned}$ | Masnetic or true north and south | Direction which gives smallest arc | (N E by E) |
| Clock face horizontal | $\begin{aligned} & \text { Hours on a } \\ & \text { clock face } \end{aligned}$ | 12 o'clock, observer at center | From 12 o'clock to the hour indicated | At _--- o'clock |
| Clock face, vertical | Hours on a clock face | Vertical, target or reference point at center | From 12 o'clock to the hour indicated | t ...-- o'clock |
| Vertical angle | Degrees or <br> mils <br> Per cent or <br> ratio (slopes <br> and roads) | Horizontal | Vertically | $\begin{aligned} & \text { Elevation, }+ \\ & (-)-- \text { mils }^{2} \\ & (--10 \% \\ & \text { slope, 10\%, } \\ & \text { gradient 1:10 } \end{aligned}$ |
| $\begin{aligned} & \text { Air and } \\ & \text { forward. } \\ & \text { observers } \\ & \text { (FA) } \end{aligned}$ | Yards $R$ or $L$ Yards 0 and S | Line of fire | Right or left and short or over and from observed point | --- R ( L ) |

## NOTE

For military purposes, exact directions should normally be expressed as azimuths measured from grid, true, or rarely, magnetic north.

- 262. Weights-(approximate) Gasoline, Oil and Water:

|  | Pounds <br> par <br> gallon $a$ | Pounds <br> per <br> cubic foot | Pounds <br> per barrel <br> $(42$ gallons $)$ |
| :--- | :--- | :--- | :--- |
| Gasoline | 6.1 | 45.6 | 256.2 |
| Oil, lubricating | 7.0 | 52.4 | 294.0 |
| Water, fresh | 8.345 | 62.4 | 350.5 |

a. Weight of container not included. Commercial 10 -gallon milk cans weigh approximately 27 pounds.

- 263. Speed of Sound.-a. In air.-At $50^{\circ}$ Fahrenheit equals 1,107.6 feet per second, in still air. With a 10 mile per hour wind against or in the direction of sound travel, the speed of sound decreases or increases about 15 feet per second; for a cross-wind, no effect. Speed increases one foot per second for each degree Fahrenheit. Humidity has little effect on speed.
b. In water.-At $33^{\circ}$ Fahrenheit equals 4,938 feet per second.
- 264. Joint Army and Navy Operations.-See FM 31-5 for information concerning joint operations and data in regard to the following:
a. Boat nomenclature.
b. Types of navy ships and aircraft.
c. Small boat types.
d. Definitions of sea terms.
- 265. Methods of Designating Time.
a. Navy.-Hours are designated from 0 to 24 beginning with midnight.
b. AIr Corps.-Hours are designated from 0 to 24 beginning with midnight except that four figures are always used. For example: 8:00 AM becomes 0800 hour ; 1:15 PM becomes 1315 hour, etc.
- 266. Map of North America Showing Latitude and Lolvgitude.

## Figure 59

LATITUDE AND LONGITUDE, NORTH AMERICA

- 267 Tables of Daylight, Darkness, Sunrise and Sunset.-Use tables as given to obtain the hour of daylight, darkness, sunrise or sunset in Local Civil Time. For greater accuracy when the station is not on one of the-following standard-meridians: $15,30,45,60,75,90,105,120,135 ; 150$, 165; or 180 degrees east or west of Greenwich; increase the time given by four minutes for each degree the station is west of the standard meridian, or decrease the given time by four minutes for each degree the station is east of the standard meridian.
a. Northern Hemisphere.-Use following Tables.
b. Southern Hemisphere.-Use the time as taken from the table of the corresponding latitude, not for the given date but for a date six months earlier or later, and make a total correction to the time as given (plus or minus).

Example.-To find the hour of daylight for May 12, latitude 35 degrees South. The date six months from May 12, gives the hour of daylight as 5:24 AM and a correction of plus 12 minutes. Thus $5: 24$ plus 12 equals 5:36 AM, the hour required.

NOTE: Times of daylight and darkness are based on nautical twilight, i.e., when the sun is 12 degrees below the horizon.

[^0]:    Column 14 -Remarks
    (1) Insert number of division.
    [A.G. 320.2 (11-1-40).]

[^1]:    Remarks: Insert number of division.
    [A. G. 320.2 (11-1-40).]

[^2]:    Item 6 Description
    A 6 in. clearance in back, on both sides of, and above brake wheel. Brake wheel clearance should be increased as much as consistent with proper location of load.

[^3]:    *Supply in overseas operations is covered in Chapter 10. Supply by air transport is covered in Chapter 11.

[^4]:    *Approximate only due to changes in models.

[^5]:    (1) Approximately two-tenths of the vehicles of a division function as supply vehicles. If the average one way distance to supply points is multiplied by four-tenths, the result is the same as multiplying the average round trip distance by two-tenths.

[^6]:    *Ship tons $=40 \mathrm{cu} . \mathrm{ft}$.

[^7]:    [AFB April, 1941]

[^8]:    (1) For the independent corps: disregard columns headed "To Gen Hosp" and assume all patients in evacuation hospitals must be evacuated to general
    (3) This table is intended primarily for use in school work and in field exercises.

[^9]:    c. When the duration of hospital treatment in theater of operations is 60 days, $12.39 \%$ of disease and nonbattle,
    $21.96 \%$ of gas, and $45 \%$ of gunshot admissions are returned to the zone of the interior from the theater of operations:

[^10]:    (1) The tabulations set forth are for a daily loss rate of 1 per thousand per day in each type of loss. With the tables, thus based on units, as a guide, the losses
     .53 , and .24 , respectively. Using the selected rate, enter the table and select the cumalative loss for the type of casualty under consideration for the period desired. Multiply the figure so obtained by the selected loss rate and obtain the cumulative losses for the desired period under the type (2) In lostimating the replace
    (2) In estimating the replacements for a particular category for the first 30 days when, for example, the troops do not reach the theater of operations until 120 M , the factor for "accumulated losses - theater of operations" under 30 M should be used and not the corresponding factor under 150 M . battle losses. Experiences of three combatants in the World War (not including the AEF) indicate that captured and missing totalled above $60 \%$ of the number killed in action, which, in turn, was $16 \%$ of the total battle casualties. The daily number of captured and missing is therefore $.10 \times$ the sum of the loss rates due to gunshot and gas casualties. It is a constant rate, occurring daily. In any situation, to obtain the predicted daily losses due to captured
    ()

[^11]:    NOTES
    (1) Data pertaining to antiaircraft searchlights:

    Average effective range of illumination: 6,000 yards.
    Traverse: 360 degrees.
    Average time required to emplace: 20 minutes.
    (2) Includes separate powder charge for railway and tractor
    (2) Includes separate powder charge for railway and tractor-drawn artillery ammunition.
    (4) For powder train fuze. Maximum effective horizontal range at altitude of 17,100 feet. Range increases at lower altitudes to a maximum horizontal range
    (5) Maximum effective horizontal range at 25,800 feet. Range increases at lower altitudes to a maximum horizontal range of 12,600 yards. (6) Maximum effective horizontal range. At lower altitudes the range increases to a maximum horizontal range of 3,500 yards.
    (7) Total traverse on carriage when gun is put in position on track without base ring.
    (8) Unit of fire for machine guns in 3 -inch gun batteries is 3,600 rounds.
    (9)
    (10) 8 hours required for position indicated in (7).
    (11) Includes construction of concrete emplacement for all-around fire.
    (12) For slopes not exceeding 5 degrees. More time is required for slopes exceeding 5 degrees, as digging is necessary.
    (13) For slopes not exceeding 4 degrees. More time is required for slopes exceeding 4 degrees, as digging is necessary.
    (5) Routings restricted to certain railway lines by requirements of curvature, clearance and bridge capacities.

[^12]:    (1) The actual operating strength will vary and should be determined accurately by communication with the unit.
    (2) Bombardment airplanes used for reconnaissance have greater ranges due to the substitution of fuel for bomb load.
    (3) Eight 1,100 -pound bombs.

[^13]:    (1) Overall width of hand cart: 3 feet 6 inches. (2) Boxed.
    (1) Livens projector, complete with ammunition ready to fire.

[^14]:    236. General.-This section lists in ready reference form the principal Fitems of signal equipment issued to troop units of the triangular and square divisions. It indicates a suitable method of asembling signal data applicable to any unit. Similar tables should be prepared and kept up to date by Signal or Communication Officers of each unit.
[^15]:    Note.-The number of acres in a rectangular tract is approximately equal to the product of one-seventieth of the length in yards by one seventieth of the breadth in yards. One acre equals 4840 square yards (about 70 yards square).

[^16]:    D-Day (First Wave)
